CAM Summary

Unit/Group/Process Information	
ID No.: DOCKALCC	
Control Device ID No.: DOCKALCC	Control Device Type: Carbon adsorption system (non-regenerative)
Applicable Regulatory Requirement	
Name: 40 CFR Part 61, Subpart FF	SOP Index No.: 61FF-2200
Pollutant: Benzene	Main Standard: § 61.349(a)
Monitoring Information	
Indicator: Benzene or VOC concentration	
Minimum Frequency: In accordance with the frequency specified in 40 CFR § 61.354(d)	
Averaging Period: N/A	
Deviation Limit: A deviation shall be reported when a) benzene is detected at the outlet of the secondary canister and b) the primary and secondary carbon canisters are not replaced within specified interval and flow is not discontinued	
<p>CAM Text: ExxonMobil shall use a portable analyzer to monitor benzene concentration for breakthrough between the primary and secondary carbon canister. A breakthrough is defined as a reading equal to or greater than 500 ppm VOC or 10 ppm benzene. The primary canister shall be replaced within 8 hours of detection of a breakthrough for canisters of 55 gallons or less and within 24 hours of the detection of breakthrough for canisters greater than 55 gallons.</p> <p>Once breakthrough between the primary and secondary canister has been determined with the portable analyzer, ExxonMobil shall use the portable analyzer to monitor VOC or benzene concentration at the outlet of the secondary canister in the series until the primary canister is replaced. If benzene is detected at the outlet of the secondary canister during this period, both canisters must be replaced within 8 hours of the detection of a breakthrough for canisters of 55 gallons or less and within 24 hours of the detection of breakthrough for canisters greater than 55 gallons or flow must be discontinued.</p> <p>Monitoring shall occur during periods which flow into the carbon adsorber is expected to occur. The maximum reading during that period shall be used as the measurement.</p>

CAM Text: Monitor the presence of a flare pilot flame using a thermocouple or other equivalent device to detect the presence of a flame or using an alarm that uses a thermocouple or other equivalent device to detect the absence of a flame. Maintain records of alarm events and duration of alarm events. Each monitoring device shall be accurate to within manufacturer's recommendations. Each monitoring device shall be calibrated at a frequency in accordance with the manufacturer's specifications or other written procedures that provide an adequate assurance that the device is calibrated accurately.

CAM Text: Monitor the presence of a flare pilot flame using a thermocouple or other equivalent device to detect the presence of a flame or using an alarm that uses a thermocouple or other equivalent device to detect the absence of a flame. Maintain records of alarm events and duration of alarm events. Each monitoring device shall be accurate to within manufacturer's recommendations. Each monitoring device shall be calibrated at a frequency in accordance with the manufacturer's specifications or other written procedures that provide an adequate assurance that the device is calibrated accurately.

Pollutant: NH ₃	Main Standard: § 117.310(c)(2)
Monitoring Information	
Indicator: Ammonia injection rate and NOx emissions	
Minimum Frequency: Once per hour	
Averaging Period: N/A	
Deviation Limit: Maximum ammonia concentration = 10 ppmv at 15% O ₂ , dry	
<p>Periodic Monitoring Text: Ammonia emissions shall be calculated using the mass balance equation specified in 30 TAC § 117.8130(1) using the difference between the ammonia injection rate and the ammonia reacted as measured by the differential NOx concentration upstream and downstream of the control device that injects urea or ammonia into the exhaust stream. Any calculated average ammonia concentration above the deviation limit in accordance with 30 TAC § 117.310(c)(2) shall be considered and reported as a deviation.</p>

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: BTRFFRTK	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Storage of VOCs	SOP Index No.: R5112-0010
Pollutant: VOC	Main Standard: § 115.112(e)(1)
Monitoring Information	
Indicator: Record of Tank Construction Specifications	
Minimum Frequency: N/A	
Averaging Period: N/A	
Deviation Limit: Records of tank construction specifications demonstrating that the fill pipe is submerged shall be maintained.	
Periodic Monitoring Text: Keep a record of tank construction specifications (e.g. engineering drawings) that show a fill pipe that extends from the top of a tank to have a maximum clearance of six inches (15.2 centimeters) from the bottom or, when the tank is loaded from the side, a discharge opening entirely submerged when the pipe used to withdraw liquid from the tank can no longer withdraw liquid in normal operation.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: BTRFFRTK	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Storage of VOCs	SOP Index No.: R5112-0010
Pollutant: VOC	Main Standard: § 115.112(e)(1)
Monitoring Information	
Indicator: Structural Integrity of the Pipe	
Minimum Frequency: Emptied and degassed	
Averaging Period: N/A	
Deviation Limit: Failure to conduct visual inspections of the fill pipe or failure to conduct necessary repairs to the fill pipe prior to refilling the storage tank shall be reported as a deviation.	
Periodic Monitoring Text: Inspect to determine the structural integrity of the fill pipe and record each time the storage vessel is emptied and degassed to ensure that it continues to meet the specifications in the above requirement. If the structural integrity of the fill pipe is in question, repairs shall be made before the storage vessel is refilled. It shall be considered and reported as a deviation if the repairs are not completed prior to refilling the storage vessel.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: CDCCSEP31	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Water Separation	SOP Index No.: R5131-0004
Pollutant: VOC	Main Standard: § 115.132(a)(1)
Monitoring Information	
Indicator: Visual Inspection	
Minimum Frequency: Annually	
Averaging Period: N/A	
Deviation Limit: Any gaps or cracks in a sealed opening that are not repaired within 15 days shall be considered and reported as a deviation.	
<p>Periodic Monitoring Text: The oil-water separator and its closure devices shall be visually inspected by the owner operator to check for defects that could result in air emissions. Defects include, but are not limited to, visible cracks, holes, or gaps in the roof sections or between the roof and the separator wall; broken, cracked, or otherwise damaged seals or gaskets on closure devices; and broken or missing hatches, access covers, caps, or other closure devices.</p> <p>Any monitoring data that indicates a gap or crack in a sealed opening and where repairs are not completed within 15 days shall be considered and reported as a deviation as required by § 122.145(2).</p>	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: CLEU1B2	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 111, Visible Emissions	SOP Index No.: R1111-0111
Pollutant: Opacity	Main Standard: § 111.111(a)(1)(A)
Monitoring Information	
Indicator: Visible Emissions	
Minimum Frequency: once per calendar quarter	
Averaging Period: N/A	
Deviation Limit: Maximum Opacity = 30%	
<p>Periodic Monitoring Text: Visible emissions observations shall be made and recorded. Note that to properly determine the presence of visible emissions, all sources must be in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 miles, away from the emission source during the observation. The observer shall select a position where the sun is not directly in the observer's eyes. If the observations cannot be conducted due to weather conditions, the date, time, and specific weather conditions shall be recorded. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor.</p> <p>If visible emissions are observed, the permit holder shall report a deviation. As an alternative, the permit holder may determine the opacity consistent with Test Method 9, as soon as practicable, but no later than 24 hours after observing visible emissions. If the result of the Test Method 9 is opacity above the opacity limit in the applicable requirement, the permit holder shall report a deviation.</p>

The observer shall select a position where the sun is not directly in the observer's eyes. If the observations cannot be conducted due to weather conditions, the date, time, and specific weather conditions shall be recorded. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor.</p> <p>If visible emissions are observed, the permit holder shall report a deviation. As an alternative, the permit holder may determine the opacity consistent with Test Method 9, as soon as practicable, but no later than 24 hours after observing visible emissions. If the result of the Test Method 9 is opacity above the opacity limit in the applicable requirement, the permit holder shall report a deviation.</p>

ID No.: FECCSEP17	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Water Separation	SOP Index No.: R5131-0004
Pollutant: VOC	Main Standard: § 115.132(a)(1)
Monitoring Information	
Indicator: Visual Inspection	
Minimum Frequency: Annually	
Averaging Period: N/A	
Deviation Limit: Any gaps or cracks in a sealed opening that are not repaired within 15 days shall be considered and reported as a deviation.	
<p>Periodic Monitoring Text: The oil-water separator and its closure devices shall be visually inspected by the owner operator to check for defects that could result in air emissions. Defects include, but are not limited to, visible cracks, holes, or gaps in the roof sections or between the roof and the separator wall; broken, cracked, or otherwise damaged seals or gaskets on closure devices; and broken or missing hatches, access covers, caps, or other closure devices.</p> <p>Any monitoring data that indicates a gap or crack in a sealed opening and where repairs are not completed within 15 days shall be considered and reported as a deviation as required by § 122.145(2).</p>

Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 111, Visible Emissions	SOP Index No.: R1111-0111
Pollutant: Opacity	Main Standard: § 111.111(a)(1)(A)
Monitoring Information	
Indicator: Visible Emissions	
Minimum Frequency: once per calendar quarter	
Averaging Period: N/A	
Deviation Limit: Maximum Opacity = 30%	
<p>Periodic Monitoring Text: Visible emissions observations shall be made and recorded. Note that to properly determine the presence of visible emissions, all sources must be in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 miles, away from the emission source during the observation. The observer shall select a position where the sun is not directly in the observer's eyes. If the observations cannot be conducted due to weather conditions, the date, time, and specific weather conditions shall be recorded. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor.</p> <p>If visible emissions are observed, the permit holder shall report a deviation. As an alternative, the permit holder may determine the opacity consistent with Test Method 9, as soon as practicable, but no later than 24 hours after observing visible emissions. If the result of the Test Method 9 is opacity above the opacity limit in the applicable requirement, the permit holder shall report a deviation.</p>

If the observations cannot be conducted due to weather conditions, the date, time, and specific weather conditions shall be recorded. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor.</p> <p>If visible emissions are observed, the permit holder shall report a deviation. As an alternative, the permit holder may determine the opacity consistent with Test Method 9, as soon as practicable, but no later than 24 hours after observing visible emissions. If the result of the Test Method 9 is opacity above the opacity limit in the applicable requirement, the permit holder shall report a deviation.</p>

ID No.: HF3F7	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 117, Subchapter B	SOP Index No.: R7300-1154
Pollutant: CO	Main Standard: § 117.310(c)(1)
Monitoring Information	
Indicator: Hourly fuel usage	
Minimum Frequency: Monthly	
Averaging Period: Hourly	
Deviation Limit: Maximum CO concentration = 400 ppmv @ 3% O ₂ , dry basis	
<p>Periodic Monitoring Text: Measure and record the hourly fuel usage. Once a month, the hourly fuel usage and the appropriate emission factor will be used to calculate the average hourly CO emissions. The calculated average hourly CO emission rate for the source will be compared to the hourly CO permit limit. If the average hourly emissions for the source are above the hourly permit limit, this will be considered and reported as a deviation.</p>

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: HU9F311	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 117, Subchapter B	SOP Index No.: R7300-1154
Pollutant: CO	Main Standard: § 117.310(c)(1)
Monitoring Information	
Indicator: Hourly fuel usage	
Minimum Frequency: Monthly	
Averaging Period: Hourly	
Deviation Limit: Maximum CO concentration = 400 ppmv @ 3% O ₂ , dry basis	
<p>Periodic Monitoring Text: Measure and record the hourly fuel usage. Once a month, the hourly fuel usage and the appropriate emission factor will be used to calculate the average hourly CO emissions. The calculated average hourly CO emission rate for the source will be compared to the hourly CO permit limit. If the average hourly emissions for the source are above the hourly permit limit, this will be considered and reported as a deviation.</p>

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: KHFF901	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 111, Visible Emissions	SOP Index No.: R1111-0111
Pollutant: Opacity	Main Standard: § 111.111(a)(1)(A)
Monitoring Information	
Indicator: Visible Emissions	
Minimum Frequency: once per calendar quarter	
Averaging Period: N/A	
Deviation Limit: Maximum Opacity = 30%	
<p>Periodic Monitoring Text: Visible emissions observations shall be made and recorded. Note that to properly determine the presence of visible emissions, all sources must be in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 miles, away from the emission source during the observation. The observer shall select a position where the sun is not directly in the observer's eyes. If the observations cannot be conducted due to weather conditions, the date, time, and specific weather conditions shall be recorded. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor.</p> <p>If visible emissions are observed, the permit holder shall report a deviation. As an alternative, the permit holder may determine the opacity consistent with Test Method 9, as soon as practicable, but no later than 24 hours after observing visible emissions. If the result of the Test Method 9 is opacity above the opacity limit in the applicable requirement, the permit holder shall report a deviation.</p>

Pollutant: VOC	Main Standard: § 115.311(a)(1)
Monitoring Information	
Indicator: Pilot Flame	
Minimum Frequency: Continuous	
Averaging Period: N/A	
Deviation Limit: All pilot flames out simultaneously when emissions from LDUVPS are being routed to the flare shall be considered and reported as a deviation.	
<p>Periodic Monitoring Text: Measure and record the presence of a pilot flame or maintain records of alarm events and duration of alarm events. The presence of a flare pilot flame shall be monitored using a thermocouple or any other equivalent device to detect the presence of a pilot flame or using an alarm that uses a thermocouple or other equivalent device to detect the absence of a flame. The monitoring instrumentation shall be maintained, calibrated and operated in accordance with manufacturer's specifications or other written procedures. Any monitoring data which indicates all pilot flames out simultaneously shall be considered and reported as a deviation.</p>

Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 111, Visible Emissions	SOP Index No.: R1111-0111
Pollutant: Opacity	Main Standard: § 111.111(a)(1)(A)
Monitoring Information	
Indicator: Visible Emissions	
Minimum Frequency: once per calendar quarter	
Averaging Period: N/A	
Deviation Limit: Maximum Opacity = 30%	
<p>Periodic Monitoring Text: Visible emissions observations shall be made and recorded. Note that to properly determine the presence of visible emissions, all sources must be in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 miles, away from the emission source during the observation. The observer shall select a position where the sun is not directly in the observer's eyes. If the observations cannot be conducted due to weather conditions, the date, time, and specific weather conditions shall be recorded. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor.</p> <p>If visible emissions are observed, the permit holder shall report a deviation. As an alternative, the permit holder may determine the opacity consistent with Test Method 9, as soon as practicable, but no later than 24 hours after observing visible emissions. If the result of the Test Method 9 is opacity above the opacity limit in the applicable requirement, the permit holder shall report a deviation.</p>

Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 117, Subchapter B	SOP Index No.: R7300-1154
Pollutant: CO	Main Standard: § 117.310(c)(1)
Monitoring Information	
Indicator: Hourly fuel usage	
Minimum Frequency: Monthly	
Averaging Period: Hourly	
Deviation Limit: Maximum CO concentration = 400 ppmv @ 3% O ₂ , dry basis	
<p>Periodic Monitoring Text: Measure and record the hourly fuel usage. Once a month, the hourly fuel usage and the appropriate emission factor will be used to calculate the average hourly CO emissions. The calculated average hourly CO emission rate for the source will be compared to the hourly CO permit limit. If the average hourly emissions for the source are above the hourly permit limit, this will be considered and reported as a deviation.</p>

Pollutant: Opacity	Main Standard: § 111.111(a)(1)(A)
Monitoring Information	
Indicator: Visible Emissions	
Minimum Frequency: once per calendar quarter	
Averaging Period: N/A	
Deviation Limit: Maximum Opacity = 30%	
<p>Periodic Monitoring Text: Visible emissions observations shall be made and recorded. Note that to properly determine the presence of visible emissions, all sources must be in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 miles, away from the emission source during the observation. The observer shall select a position where the sun is not directly in the observer's eyes. If the observations cannot be conducted due to weather conditions, the date, time, and specific weather conditions shall be recorded. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor.</p> <p>If visible emissions are observed, the permit holder shall report a deviation. As an alternative, the permit holder may determine the opacity consistent with Test Method 9, as soon as practicable, but no later than 24 hours after observing visible emissions. If the result of the Test Method 9 is opacity above the opacity limit in the applicable requirement, the permit holder shall report a deviation.</p>

Monitoring Information	
Indicator: Opacity	
Minimum Frequency: Once per month	
Averaging Period: Six-minutes	
Deviation Limit: Maximum opacity = 15%	
Periodic Monitoring Text: Opacity shall be monitored, by a certified observer, for at least one, six-minute period in accordance with Title 40 Code of Federal Regulations Part 60 (40 CFR Part 60), Appendix A, Test Method 9. Any opacity readings above the deviation limit shall be reported as a deviation.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: PS3FRTK	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Storage of VOCs	SOP Index No.: R5112-0010
Pollutant: VOC	Main Standard: § 115.112(e)(1)
Monitoring Information	
Indicator: Record of Tank Construction Specifications	
Minimum Frequency: N/A	
Averaging Period: N/A	
Deviation Limit: Failure to keep tank record specifications that show that the fill pipe is submerged during loading operations.	
Periodic Monitoring Text: Keep a record of tank construction specifications (e.g. engineering drawings) that show a fill pipe that extends from the top of a tank to have a maximum clearance of six inches (15.2 centimeters) from the bottom or, when the tank is loaded from the side, a discharge opening entirely submerged when the pipe used to withdraw liquid from the tank can no longer withdraw liquid in normal operation.

Indicator: Visible Emissions	
Minimum Frequency: once per calendar quarter	
Averaging Period: N/A	
Deviation Limit: Maximum Opacity = 30%	
<p>Periodic Monitoring Text: Visible emissions observations shall be made and recorded. Note that to properly determine the presence of visible emissions, all sources must be in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 miles, away from the emission source during the observation. The observer shall select a position where the sun is not directly in the observer's eyes. If the observations cannot be conducted due to weather conditions, the date, time, and specific weather conditions shall be recorded. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor.</p> <p>If visible emissions are observed, the permit holder shall report a deviation. As an alternative, the permit holder may determine the opacity consistent with Test Method 9, as soon as practicable, but no later than 24 hours after observing visible emissions. If the result of the Test Method 9 is opacity above the opacity limit in the applicable requirement, the permit holder shall report a deviation.</p>

Minimum Frequency: Continuous	
Averaging Period: N/A	
Deviation Limit: All pilot flames out simultaneously when emissions from SHUVPS are being routed to the flares shall be considered and reported as a deviation.	
<p>Periodic Monitoring Text: Measure and record the presence of a pilot flame or maintain records of alarm events and duration of alarm events. The presence of a flare pilot flame shall be monitored using a thermocouple or any other equivalent device to detect the presence of a pilot flame or using an alarm that uses a thermocouple or other equivalent device to detect the absence of a flame. The monitoring instrumentation shall be maintained, calibrated and operated in accordance with manufacturer's specifications or other written procedures. Any monitoring data which indicates all pilot flames out simultaneously shall be considered and reported as a deviation.</p>

Minimum Frequency: Annually	
Averaging Period: N/A	
<p>Deviation Limit: Any monitoring data indicating defects in the roof or seals have not been repaired within the repair period specified or the storage vessel has not been emptied within the repair period specified shall be considered and reported as a deviation.</p> <p>Periodic Monitoring Text: Visually inspect and record the inspection of the external floating roof to ensure: the roof is floating on the surface of the VOC and not on the leg supports, liquid has not accumulated on the external floating roof, the seals are not detached, and there are no holes or tears in the seal fabric. If a failure is detected during the visual inspection, necessary repairs will be made within 45 days of the identification of the failure or the storage vessel will be emptied. If the failure that is detected during inspection cannot be repaired within 45 days and if the vessel cannot be emptied within 45 days, a 30-day extension may be requested from the Administrator of the report. Such an extension requested must include a demonstration of unavailability of alternative storage capacity and a specification of a schedule that will assure that the control equipment will be repaired or the vessel will be emptied as soon as possible. Any monitoring data in which the roof is not floating on the surface of the VOC, if liquid has accumulated on the external floating roof, the seals are detached, or if there are holes or tears in the seal fabric shall be considered and reported as a deviation.</p>

ID No.: TK0747	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 40 CFR Part 60, Subpart Kb	SOP Index No.: 60Kb-0081
Pollutant: VOC	Main Standard: § 60.112b(b)(1)
Monitoring Information	
Indicator: VOC Concentration	
Minimum Frequency: Once per year	
Averaging Period: N/A	
Deviation Limit: Any monitoring data that shows VOC emissions exceeding 500 ppm above background concentration shall be considered and reported as a deviation.	
Periodic Monitoring Text: Measure and record fugitive emissions from the vapor collection system in accordance with part 60, appendix A, method 21.

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: TK0844	
Control Device ID No.: TK0844CAS	Control Device Type: Carbon adsorption system (non-regenerative)
Applicable Regulatory Requirement	
Name: 40 CFR Part 60, Subpart Kb	SOP Index No.: 60Kb-0073
Pollutant: VOC	Main Standard: [G]§ 60.112b(a)(3)
Monitoring Information	
Indicator: Carbon Replacement Interval	
Minimum Frequency: At each replacement of carbon canister	
Averaging Period: N/A	
Deviation Limit: Any data, collected for a period which exceeds the maximum carbon replacement interval shall be considered and reported as a deviation.	
Periodic Monitoring Text: Monitor and record the replacement time interval of the carbon canister(s), as determined by the maximum design flow rate and organic concentration in the gas stream vented to the carbon adsorption system. Any data, collected for a period which exceeds the maximum carbon replacement interval shall be considered and reported as a deviation.

If a failure is detected during the visual inspection, necessary repairs will be made within 45 days of the identification of the failure or the storage vessel will be emptied. If the failure that is detected during inspection cannot be repaired within 45 days and if the vessel cannot be emptied within 45 days, a 30-day extension may be requested from the Administrator of the report. Such an extension requested must include a demonstration of unavailability of alternative storage capacity and a specification of a schedule that will assure that the control equipment will be repaired or the vessel will be emptied as soon as possible. Any monitoring data in which the roof is not floating on the surface of the VOC, if liquid has accumulated on the external floating roof, the seals are detached, or if there are holes or tears in the seal fabric shall be considered and reported as a deviation.</p>

<p>Periodic Monitoring Text: Inspect to determine the structural integrity of the fill pipe and record each time the storage vessel is emptied and degassed to ensure that it continues to meet the specifications in the above requirement. If the structural integrity of the fill pipe is in question, repairs shall be made before the storage vessel is refilled. It shall be considered and reported as a deviation if the repairs are not completed prior to refilling the storage vessel.</p>	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: TR117	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Storage of VOCs	SOP Index No.: R5112-0010
Pollutant: VOC	Main Standard: § 115.112(e)(1)
Monitoring Information	
Indicator: Record of Tank Construction Specifications	
Minimum Frequency: N/A	
Averaging Period: N/A	
Deviation Limit: Failure to keep records of tank construction specifications that demonstrates that the fill pipe is submerged during filling operations shall be reported as a deviation.	
Periodic Monitoring Text: Keep a record of tank construction specifications (e.g. engineering drawings) that show a fill pipe that extends from the top of a tank to have a maximum clearance of six inches (15.2 centimeters) from the bottom or, when the tank is loaded from the side, a discharge opening entirely submerged when the pipe used to withdraw liquid from the tank can no longer withdraw liquid in normal operation.

Pollutant: VOC	Main Standard: § 115.311(a)(1)
Monitoring Information	
Indicator: Pilot Flame	
Minimum Frequency: Continuous	
Averaging Period: N/A	
Deviation Limit: All pilot flames out simultaneously when emissions from VPS8VPS are being routed to the flare shall be considered and reported as a deviation.	
<p>Periodic Monitoring Text: Measure and record the presence of a pilot flame or maintain records of alarm events and duration of alarm events. The presence of a flare pilot flame shall be monitored using a thermocouple or any other equivalent device to detect the presence of a pilot flame or using an alarm that uses a thermocouple or other equivalent device to detect the absence of a flame. The monitoring instrumentation shall be maintained, calibrated and operated in accordance with manufacturer's specifications or other written procedures. Any monitoring data which indicates all pilot flames out simultaneously shall be considered and reported as a deviation.</p>	

Permit Shield

Permit Shield	2574
----------------------------	-------------

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
ALAGOON	N/A	30 TAC Chapter 115, Industrial Wastewater	This facility does not contain an affected VOC wastewater that has not been treated or exempted.
ALAGOON	N/A	40 CFR Part 61, Subpart FF	This facility is not utilized as a controlled waste management unit per 61.342(e) compliance option. Therefore, unit specific requirements are not applicable.
ALAGOON	N/A	40 CFR Part 63, Subpart DD	The facility does not manage off-site material.
ALAGOON	N/A	40 CFR Part 63, Subpart G	The facility does not receive a Group 1 wastewater stream from a chemical manufacturing process unit which meets the criteria of 63.100(b)(1).
ALAGOON	N/A	40 CFR Part 63, Subpart QQ	This facility is not subject to a subpart within 40 CFR 60, 61, or 63 that references 40 CFR Part 63 Subpart QQ.
ALKYC322VT	N/A	40 CFR Part 63, Subpart DD	The emission unit does not manage off-site material.
ALKYC322VT	N/A	40 CFR Part 63, Subpart G	This process vent is not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
ALKYC323VT	N/A	40 CFR Part 63, Subpart DD	The emission unit does not manage off-site material.
ALKYC323VT	N/A	40 CFR Part 63, Subpart G	This process vent is not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
ALKYC324VT	N/A	40 CFR Part 63, Subpart DD	The emission unit does not manage off-site material.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
ALKYC324VT	N/A	40 CFR Part 63, Subpart G	This process vent is not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
ALKYC325VT	N/A	40 CFR Part 63, Subpart DD	The emission unit does not manage off-site material.
ALKYC325VT	N/A	40 CFR Part 63, Subpart G	This process vent is not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
BERTH8LD	N/A	40 CFR Part 61, Subpart BB	Loading rack which loads only benzene-laden waste, gasoline, crude oil, natural gas liquids, petroleum distillates, or benzene-laden liquid from coke by-product recovery plants.
BH6GTG38	N/A	40 CFR Part 63, Subpart YYYY	Turbine was constructed on or before 1/14/2003 and has not been reconstructed.
BH6ICE1	N/A	40 CFR Part 63, Subpart ZZZZ	Existing emergency stationary RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions.
BH6WHB68	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is a steam generator which does not combust solid fossil or liquid fuel.
BH6WHB68	N/A	40 CFR Part 60, Subpart D	Heat input rate is not greater than 250 MMBtu/hr
BH6WHB68	N/A	40 CFR Part 60, Subpart Da	Does not meet the definition of electric utility steam generating unit as defined in 60.41a.
BH6WHB68	N/A	40 CFR Part 60, Subpart Dc	Maximum design heat input capacity > 100 MMBtu/hr
BH6WHB68	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
BH7B71	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
BH7B71	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
BH7B72	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
BH7B72	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
BH7B73	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
BH7B73	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
BH7B74	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
BH7B74	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
BH7GTG41	N/A	40 CFR Part 60, Subpart GG	Constructed, modified, or reconstructed on or before 10/3/77.
BH7GTG41	N/A	40 CFR Part 63, Subpart YYYY	Turbine was constructed on or before 1/14/2003 and has not been reconstructed.
BH7GTG42	N/A	40 CFR Part 60, Subpart GG	Constructed, modified, or reconstructed on or before 10/3/77.
BH7GTG42	N/A	40 CFR Part 63, Subpart YYYY	Turbine was constructed on or before 1/14/2003 and has not been reconstructed.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
BH7GTG43	N/A	40 CFR Part 60, Subpart GG	Constructed, modified, or reconstructed on or before 10/3/77.
BH7GTG43	N/A	40 CFR Part 63, Subpart YYYY	Turbine was constructed on or before 1/14/2003 and has not been reconstructed.
BH7GTG44	N/A	40 CFR Part 60, Subpart GG	Constructed, modified, or reconstructed on or before 10/3/77.
BH7GTG44	N/A	40 CFR Part 63, Subpart YYYY	Turbine was constructed on or before 1/14/2003 and has not been reconstructed.
BH7GTG45	N/A	40 CFR Part 63, Subpart YYYY	Turbine was constructed on or before 1/14/2003 and has not been reconstructed.
BH7WHB75	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is a steam generator which does not combust solid fossil or liquid fuel.
BH7WHB75	N/A	40 CFR Part 60, Subpart D	Heat input rate is not greater than 250 MMBtu/hr
BH7WHB75	N/A	40 CFR Part 60, Subpart Da	Does not meet the definition of electric utility steam generating unit as defined in 60.41a.
BH7WHB75	N/A	40 CFR Part 60, Subpart Dc	Maximum design heat input capacity > 100 MMBtu/hr
BH7WHB75	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
BS4VPS	N/A	30 TAC Chapter 115, Unit Turn & Vac System-Pet Ref	Vent stream is returned to the process.
BTCNTVT	N/A	40 CFR Part 63, Subpart G	This process vent is not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
BTRFCHEMFG	N/A	40 CFR Part 60, Subpart VV	Superceded by MACT H.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
BTRFCHEMFG	N/A	40 CFR Part 61, Subpart J	Superceded by MACT H.
BTRFCHEMFG	N/A	40 CFR Part 61, Subpart V	Superceded by MACT H.
BTRFFRTK	N/A	40 CFR Part 60, Subpart Kb	Tanks are less than 75 cubic meters capacity, between 75 and 151 cubic meter capacity storing a VOL with a maximum TVP < 2.2 psia, or tanks meet the definition of a process tank.
BTRFREFFG	N/A	40 CFR Part 60, Subpart VV	Superceded by MACT CC.
BTRFREFFG	N/A	40 CFR Part 61, Subpart J	Superceded by MACT CC.
BTRFREFFG	N/A	40 CFR Part 61, Subpart V	Superceded by MACT CC.
C23169	N/A	30 TAC Chapter 115, Storage of VOCs	Tank is less than 1,000 gallon capacity.
C23169	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
C23169	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
C23169	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
C23169	N/A	40 CFR Part 63, Subpart CC	Tank does not meet definition of storage vessel because it is less than 40 cubic meters.
C23169	N/A	40 CFR Part 63, Subpart G	Tank does not meet the definition of storage vessel because it is less than 38 cubic meters.
C23178	N/A	30 TAC Chapter 115, Storage of VOCs	Tank is less than 1,000 gallon capacity.
C23178	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
C23178	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
C23178	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
C23178	N/A	40 CFR Part 63, Subpart CC	Tank does not meet definition of storage vessel because it is less than 40 cubic meters.
C23178	N/A	40 CFR Part 63, Subpart G	Tank does not meet the definition of storage vessel because it is less than 38 cubic meters.
C770/780D2	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
C770/780D2	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
C770/780D2	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
C770/780D2	N/A	40 CFR Part 63, Subpart CC	Tank does not meet definition of storage vessel because it is less than 40 cubic meters.
C770/780D2	N/A	40 CFR Part 63, Subpart G	Tank does not meet the definition of storage vessel because it is less than 38 cubic meters.
C770/780D3	N/A	30 TAC Chapter 115, Storage of VOCs	Tank is less than 1,000 gallon capacity.
C770/780D3	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
C770/780D3	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
C770/780D3	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
C770/780D3	N/A	40 CFR Part 63, Subpart CC	Tank does not meet definition of storage vessel because it is less than 40 cubic meters.
C770/780D3	N/A	40 CFR Part 63, Subpart G	Tank does not meet the definition of storage vessel because it is less than 38 cubic meters.
C780-D-3	N/A	30 TAC Chapter 115, Storage of VOCs	Tank is less than 1,000 gallon capacity.
C780-D-3	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
C780-D-3	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
C780-D-3	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
C780-D-3	N/A	40 CFR Part 63, Subpart CC	Tank does not meet definition of storage vessel because it is less than 40 cubic meters.
C780-D-3	N/A	40 CFR Part 63, Subpart G	Tank does not meet definition of storage vessel because it is less than 38 cubic meters.
CDCCSEP31	N/A	40 CFR Part 60, Subpart QQQ	Facility not built or modified after May 4, 1987.
CDCCSEP31	N/A	40 CFR Part 61, Subpart FF	This facility is not utilized as a controlled waste management unit per 61.342(e) compliance option. Therefore, unit specific requirements are not applicable.
CDCCSEP31	N/A	40 CFR Part 63, Subpart DD	The facility does not manage off-site material.
CDCCSEP31	N/A	40 CFR Part 63, Subpart VV	The facility is not subject to a subpart within 40 CFR 60, 61, or 63 that references 40 CFR 63 Subpart VV.
CDCCSEP33	N/A	40 CFR Part 60, Subpart QQQ	Facility not built or modified after May 4, 1987.
CDCCSEP33	N/A	40 CFR Part 61, Subpart FF	This facility is not utilized as a controlled waste management unit per 61.342(e) compliance option. Therefore, unit specific requirements are not applicable.
CDCCSEP33	N/A	40 CFR Part 63, Subpart DD	The facility does not manage off-site material.
CDCCSEP33	N/A	40 CFR Part 63, Subpart VV	The facility is not subject to a subpart within 40 CFR 60, 61, or 63 that references 40 CFR 63 Subpart VV.
CDCCSEP34	N/A	40 CFR Part 60, Subpart QQQ	Facility not built or modified after May 4, 1987.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
CDCCSEP34	N/A	40 CFR Part 61, Subpart FF	This facility is not utilized as a controlled waste management unit per 61.342(e) compliance option. Therefore, unit specific requirements are not applicable.
CDCCSEP34	N/A	40 CFR Part 63, Subpart DD	The facility does not manage off-site material.
CDCCSEP34	N/A	40 CFR Part 63, Subpart VV	The facility is not subject to a subpart within 40 CFR 60, 61, or 63 that references 40 CFR Part 63 Subpart VV.
CLEU D404	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
CLEU D404	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after July 23, 1984.
CLEU D404	N/A	40 CFR Part 60, Subpart Kb	Tank stores VOC with true vapor pressure < 0.5 psia.
CLEU D404	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
CLEU1B2	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
CLEU1B2	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
CLEU2F1	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
CLEU2F1	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
CLEU2F2	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
CLEU2F2	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
CLEU2F3	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
CLEU2F3	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
CLEU3F1	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
CLEU3F1	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
CLEUD170	N/A	40 CFR Part 63, Subpart G	This process vent is not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
CONTK008	N/A	30 TAC Chapter 115, Storage of VOCs	Storage tank with storage capacity less than 1,000 gallons.
CONTK008	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
CONTK008	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after July 23, 1984.
CONTK008	N/A	40 CFR Part 60, Subpart Kb	Storage capacity is less than or equal to 75 cubic meters (19,800 gallons) and the vessel stores a volatile organic liquid with maximum true vapor pressure < 15.0 kPa (2.18 psia).
CONTK012	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
CONTK012	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after July 23, 1984.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
CONTK012	N/A	40 CFR Part 60, Subpart Kb	Storage capacity is less than or equal to 75 cubic meters (19,800 gallons) and the vessel stores a volatile organic liquid with maximum true vapor pressure < 15.0 kPa (2.18 psia).
CONTK013	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
CONTK013	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after July 23, 1984.
CONTK013	N/A	40 CFR Part 60, Subpart Kb	Storage capacity is less than or equal to 75 cubic meters (19,800 gallons) and the vessel stores a volatile organic liquid with maximum true vapor pressure < 15.0 kPa (2.18 psia).
CONTK014	N/A	30 TAC Chapter 115, Storage of VOCs	Storage tank with storage capacity less than 1,000 gallons.
CONTK014	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
CONTK014	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after July 23, 1984.
CONTK014	N/A	40 CFR Part 60, Subpart Kb	Storage capacity is less than or equal to 75 cubic meters (19,800 gallons) and the vessel stores a volatile organic liquid with maximum true vapor pressure < 15.0 kPa (2.18 psia).
CONTK015	N/A	30 TAC Chapter 115, Storage of VOCs	Storage tank with storage capacity less than 1,000 gallons.
CONTK015	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
CONTK015	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after July 23, 1984.
CONTK015	N/A	40 CFR Part 60, Subpart Kb	Storage capacity is less than or equal to 75 cubic meters (19,800 gallons) and the vessel stores a volatile organic liquid with maximum true vapor pressure < 15.0 kPa (2.18 psia).

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
CONTK018	N/A	30 TAC Chapter 115, Storage of VOCs	Storage tank with storage capacity less than 1,000 gallons.
CONTK018	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
CONTK018	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after July 23, 1984.
CONTK018	N/A	40 CFR Part 60, Subpart Kb	Storage capacity is less than or equal to 75 cubic meters (19,800 gallons) and the vessel stores a volatile organic liquid with maximum true vapor pressure < 15.0 kPa (2.18 psia).
CONTK020	N/A	30 TAC Chapter 115, Loading and Unloading of VOC	Motor vehicle dispensing facility is exempt from 30 TAC Chapter 115, Subchapter C, Division 1, Loading and Unloading of VOCs.
CONTK020	N/A	30 TAC Chapter 115, Storage of VOCs	Storage tank with a storage capacity less than 25,000 gallons located at a motor vehicle fuel dispensing facility.
CONTK021	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
CONTK021	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after July 23, 1984.
CONTK021	N/A	40 CFR Part 60, Subpart Kb	Storage capacity is less than or equal to 75 cubic meters (19,800 gallons) and the vessel stores a volatile organic liquid with maximum true vapor pressure < 15.0 kPa (2.18 psia).
CONTK022	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.

D-305	N/A	40 CFR Part 63, Subpart CC	Tank does not meet definition of storage vessel because it is less than 40 cubic meters.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
D-305	N/A	40 CFR Part 63, Subpart G	Tank does not meet definition of storage vessel because it is less than 38 cubic meters.
D-306 HDS	N/A	30 TAC Chapter 115, Storage of VOCs	Tank is less than 1,000 gallon capacity.
D-306 HDS	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
D-306 HDS	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
D-306 HDS	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
D-306 HDS	N/A	40 CFR Part 63, Subpart CC	Tank does not meet definition of storage vessel because it is less than 40 cubic meters.
D-306 HDS	N/A	40 CFR Part 63, Subpart G	Tank does not meet the definition of storage vessel because it is less than 38 cubic meters.
D-411 HUCC	N/A	30 TAC Chapter 115, Storage of VOCs	Tank is less than 1,000 gallon capacity.
D-411 HUCC	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
D-411 HUCC	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
D-411 HUCC	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
D-411 HUCC	N/A	40 CFR Part 63, Subpart CC	Tank does not meet definition of storage vessel because it is less than 40 cubic meters.
D-411 HUCC	N/A	40 CFR Part 63, Subpart G	Tank does not meet the definition of storage vessel because it is less than 38 cubic meters.
D-425A	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
D-425A	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
D-425A	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
D-425A	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
D-505	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
D-505	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
D-505	N/A	40 CFR Part 60, Subpart Kb	Tank meets the definition of process tank.
D-505	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
D-619A	N/A	30 TAC Chapter 115, Storage of VOCs	Tank is less than 1,000 gallon capacity.
D-619A	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
D-619A	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
D-619A	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
D-619A	N/A	40 CFR Part 63, Subpart CC	Tank does not meet definition of storage vessel because it is less than 40 cubic meters.
D-619A	N/A	40 CFR Part 63, Subpart G	Tank does not meet the definition of storage vessel because it is less than 38 cubic meters.
D-619B	N/A	30 TAC Chapter 115, Storage of VOCs	Tank is less than 1,000 gallon capacity.
D-619B	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
D-619B	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
D-619B	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
D-619B	N/A	40 CFR Part 63, Subpart CC	Tank does not meet definition of storage vessel because it is less than 40 cubic meters.
D-619B	N/A	40 CFR Part 63, Subpart G	Tank does not meet the definition of storage vessel because it is less than 38 cubic meters.
D-621	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
D-621	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
D-621	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
D-621	N/A	40 CFR Part 63, Subpart CC	Tank does not meet definition of storage vessel because it is less than 40 cubic meters.
D-621	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
D-664	N/A	30 TAC Chapter 115, Storage of VOCs	Tank is less than 1,000 gallon capacity.
D-664	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
D-664	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
D-664	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
D-664	N/A	40 CFR Part 63, Subpart CC	Tank does not meet definition of storage vessel because it is less than 40 cubic meters.
D-664	N/A	40 CFR Part 63, Subpart G	Tank does not meet the definition of storage vessel because it is less than 38 cubic meters.
D-731 FW	N/A	30 TAC Chapter 115, Storage of VOCs	Tank is less than 1,000 gallon capacity.
D-731 FW	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
D-731 FW	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
D-731 FW	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
D-731 FW	N/A	40 CFR Part 63, Subpart CC	Tank does not meet the definition of storage vessel because it is less than 40 cubic meters.
D-731 FW	N/A	40 CFR Part 63, Subpart G	Tank does not meet the definition of storage vessel because it is less than 38 cubic meters.
D505 A-D	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
D505 A-D	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
D505 A-D	N/A	40 CFR Part 60, Subpart Kb	Tank meets the definition of process tank.
D505 A-D	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
DAUF23VT	N/A	40 CFR Part 63, Subpart DD	The emission unit does not manage off-site material.
DAUF23VT	N/A	40 CFR Part 63, Subpart G	This process vent is not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
DCU	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
DCUC601VT	N/A	40 CFR Part 63, Subpart G	The process vent is not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
DCUF601	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
DCUF601	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
DCUF602	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
DCUF602	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.

F-8	N/A	40 CFR Part 60, Subpart K	Tank was constructed, modified, or reconstructed before June 11, 1973.
F-8	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed, modified, or reconstructed on/before 5/18/78.
F-8	N/A	40 CFR Part 60, Subpart Kb	Tank was constructed, modified, or reconstructed on/before 7/23/84.
FCCU2F1A	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
FCCU2F2A	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
FCCU2WGS	N/A	40 CFR Part 63, Subpart DD	The emission unit does not manage off-site material.
FCCU3 D-310	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
FCCU3 D-310	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after July 23, 1984.
FCCU3 D-310	N/A	40 CFR Part 60, Subpart Kb	Tank stores VOC with true vapor pressure < 2.2 psia.
FCCU3F103	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
FCCU3F103	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
FCCU3F105	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
FCCU3F105	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
FCCU3S501A	N/A	40 CFR Part 60, Subpart D	Facility is not fossil-fuel or wood-residue fired.
FCCU3S501A	N/A	40 CFR Part 60, Subpart Db	Constructed, modified, or reconstructed on/before June 19, 1984.
FCCU3S501A	N/A	40 CFR Part 60, Subpart Dc	Constructed, modified, or reconstructed on/before June 9, 1989.
FCCU3S501B	N/A	40 CFR Part 60, Subpart D	Facility is not fossil-fuel or wood-residue fired.
FCCU3S501B	N/A	40 CFR Part 60, Subpart Db	Constructed, modified, or reconstructed on/before June 19, 1984.
FCCU3S501B	N/A	40 CFR Part 60, Subpart Dc	Constructed, modified, or reconstructed on/before June 9, 1989.
FCCU3S501B	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
FCCU3S501C	N/A	40 CFR Part 60, Subpart D	Facility is not fossil-fuel or wood-residue fired.
FCCU3S501C	N/A	40 CFR Part 60, Subpart Db	Constructed, modified, or reconstructed on/before June 19, 1984.
FCCU3S501C	N/A	40 CFR Part 60, Subpart Dc	Constructed, modified, or reconstructed on/before June 9, 1989.
FCCU3S501C	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
FCCU3WGS	N/A	40 CFR Part 63, Subpart DD	The emission unit does not manage off-site material.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
FCCUCATPND	N/A	40 CFR Part 61, Subpart FF	This facility is not utilized as a controlled waste management unit per 61.342(e) compliance option. Therefore, unit specific requirements are not applicable.
FCCUCATPND	N/A	40 CFR Part 63, Subpart DD	The facility does not manage off-site material.
FCCUCATPND	N/A	40 CFR Part 63, Subpart G	The facility is not associated with a chemical manufacturing process unit which meets the criteria of 63.100(b)(1).
FCCUCATPND	N/A	40 CFR Part 63, Subpart QQ	This facility is not subject to a subpart within 40 CFR 60, 61, or 63 that references 40 CFR Part 63 Subpart QQ.
FECC D104	N/A	40 CFR Part 60, Subpart K	Tank was constructed, modified, or reconstructed before June 11, 1973.
FECC D104	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed, modified, or reconstructed on/before 5/18/78.
FECC D104	N/A	40 CFR Part 60, Subpart Kb	Tank was constructed, modified, or reconstructed on/before 7/23/84.
FECC D104	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
FECC D105	N/A	40 CFR Part 60, Subpart K	Tank was constructed, modified, or reconstructed before June 11, 1973.
FECC D105	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed, modified, or reconstructed on/before 5/18/78.
FECC D105	N/A	40 CFR Part 60, Subpart Kb	Tank was constructed, modified, or reconstructed on/before 7/23/84.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
FECC D105	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
FECC D507	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
FECC D507	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
FECC D507	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
FECC D507	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
FECCSEP17	N/A	40 CFR Part 60, Subpart QQQ	Facility not built or modified after May 4, 1987.
FECCSEP17	N/A	40 CFR Part 61, Subpart FF	This facility is not utilized as a controlled waste management unit per 61.342(e) compliance option. Therefore, unit specific requirements are not applicable.
FECCSEP17	N/A	40 CFR Part 63, Subpart DD	The facility does not manage off-site material.
FECCSEP17	N/A	40 CFR Part 63, Subpart VV	The facility is not subject to a subpart within 40 CFR 60, 61, or 63 that references 40 CFR Part 63 Subpart VV.
FECCSEP19	N/A	40 CFR Part 60, Subpart QQQ	Facility not built or modified after May 4, 1987.
FECCSEP19	N/A	40 CFR Part 61, Subpart FF	This facility is not utilized as a controlled waste management unit per 61.342(e) compliance option. Therefore, unit specific requirements are not applicable.
FECCSEP19	N/A	40 CFR Part 63, Subpart DD	The facility does not manage off-site material.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
FECCSEP19	N/A	40 CFR Part 63, Subpart VV	The facility is not subject to a subpart within 40 CFR 60, 61, or 63 that references 40 CFR Part 63 Subpart VV.
FLARE03	N/A	40 CFR Part 60, Subpart J	Flare complies with the applicable provisions of 40 CFR Part 60, Subpart Ja.
FLARE04	N/A	40 CFR Part 60, Subpart J	Flare complies with the applicable provisions of 40 CFR Part 60, Subpart Ja.
FLARE05	N/A	40 CFR Part 60, Subpart J	Flare complies with the applicable provisions of 40 CFR Part 60, Subpart Ja.
FLARE06	N/A	40 CFR Part 60, Subpart J	Flare complies with the applicable provisions of 40 CFR Part 60, Subpart Ja.
FLARE11	N/A	40 CFR Part 60, Subpart J	Flare complies with the applicable provisions of 40 CFR Part 60, Subpart Ja.
FLARE14	N/A	40 CFR Part 60, Subpart J	Flare complies with the applicable provisions of 40 CFR Part 60, Subpart Ja.
FLARE15	N/A	40 CFR Part 60, Subpart J	Flare complies with the applicable provisions of 40 CFR Part 60, Subpart Ja.
FLARE16	N/A	40 CFR Part 60, Subpart J	Flare complies with the applicable provisions of 40 CFR Part 60, Subpart Ja.
FLARE17	N/A	40 CFR Part 60, Subpart J	Flare complies with the applicable provisions of 40 CFR Part 60, Subpart Ja.
FLARE18	N/A	40 CFR Part 60, Subpart J	Flare complies with the applicable provisions of 40 CFR Part 60, Subpart Ja.
FLARE19	N/A	40 CFR Part 60, Subpart J	Flare complies with the applicable provisions of Subpart Ja.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
FLARE20	N/A	40 CFR Part 60, Subpart J	Flare complies with the applicable provisions of 40 CFR Part 60, Subpart Ja.
FLARE21	N/A	40 CFR Part 60, Subpart J	Flare complies with the applicable provisions of 40 CFR Part 60, Subpart Ja.
FLARE22	N/A	40 CFR Part 60, Subpart J	Flare complies with the applicable provisions of Subpart Ja.
FLARE25	N/A	40 CFR Part 60, Subpart J	Flare complies with the applicable provisions of Subpart Ja.
FLARE26	N/A	40 CFR Part 60, Subpart J	Flare complies with the applicable provisions of Subpart Ja.
FLARE27	N/A	40 CFR Part 60, Subpart J	Flare complies with the applicable provisions of 40 CFR Part 60, Subpart Ja.
FLARE29	N/A	40 CFR Part 60, Subpart J	Flare complies with the applicable provisions of Subpart Ja.
FLARE29	N/A	40 CFR Part 61, Subpart FF	This facility is not utilized as a control waste management unit per 61.342(e) compliance option. Therefore, unit specific requirements are not applicable.
FNCCSEP11	N/A	40 CFR Part 60, Subpart QQQ	Facility not built or modified after May 4, 1987.
FNCCSEP11	N/A	40 CFR Part 61, Subpart FF	This facility is not utilized as a controlled waste management unit per 61.342(e) compliance option. Therefore, unit specific requirements are not applicable.
FNCCSEP11	N/A	40 CFR Part 63, Subpart DD	The facility does not manage off-site material.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
FNCCSEP11	N/A	40 CFR Part 63, Subpart VV	The facility is not subject to a subpart within 40 CFR 60, 61, or 63 that references 40 CFR Part 63 Subpart VV.
FSMBDEG	N/A	40 CFR Part 63, Subpart T	Degreaser is not a batch vapor, in-line vapor, in-line cold, and batch cold solvent cleaning machine that uses any solvent containing halogenated HAPs, in a total concentration > 5%, by weight, as a cleaning and/or drying agent.
FT-06	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
FT-06	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
FT-06	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
FT-07	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
FT-07	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
FT-07	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
FW F-32	N/A	40 CFR Part 60, Subpart Kb	Tank meets the definition of process tank.
FW F-32	N/A	40 CFR Part 63, Subpart G	This process vent is not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
FWCCSEP16	N/A	40 CFR Part 60, Subpart QQQ	Facility not built or modified after May 4, 1987.
FWCCSEP16	N/A	40 CFR Part 61, Subpart FF	This facility is not utilized as a controlled waste management unit per 61.342(e) compliance option. Therefore, unit specific requirements are not applicable.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
FWCCSEP16	N/A	40 CFR Part 63, Subpart DD	The facility does not manage off-site material.
FWCCSEP16	N/A	40 CFR Part 63, Subpart VV	The facility is not subject to a subpart within 40 CFR 60, 61, or 63 that references 40 CFR Part 63 Subpart VV.
FXK	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
FXK D-307	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
FXK D-307	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
FXK D-307	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
FXKC303VT	N/A	40 CFR Part 63, Subpart G	This process vent is not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
FXKF301	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
FXKF301	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
FXKFRKTKS	N/A	40 CFR Part 60, Subpart K	Tanks were constructed after 5/18/78.
FXKFRKTKS	N/A	40 CFR Part 60, Subpart Ka	Tanks were constructed after 7/23/84.
FXKFRKTKS	N/A	40 CFR Part 60, Subpart Kb	Tanks are less than 75 cubic meters capacity, between 75 and 151 cubic meter capacity storing a VOL with a maximum TVP < 2.2 psia, or tanks meet the definition of a process tank.
FXKGT301	N/A	40 CFR Part 63, Subpart YYYY	Turbine was constructed on or before 1/14/2003 and has not been reconstructed.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
FXKRACKLD	N/A	40 CFR Part 63, Subpart G	This transfer rack is not associated with a chemical manufacturing process unit that meets the criteria specified in 63.100(b)(1).
FXKSEP	N/A	30 TAC Chapter 115, Industrial Wastewater	Component of wastewater treatment facility is subject to 115.140 (Industrial Wastewater) and is exempt from the requirements of 115.131 (Water Separation).
FXKSEP	N/A	40 CFR Part 60, Subpart QQQ	Facility not built or modified after May 4, 1987.
FXKSEP	N/A	40 CFR Part 61, Subpart FF	This facility is not utilized as a controlled waste management unit per 61.342(e) compliance option. Therefore, unit specific requirements are not applicable.
FXKSEP	N/A	40 CFR Part 63, Subpart DD	The facility does not manage off-site material.
FXKSEP	N/A	40 CFR Part 63, Subpart G	The facility does not receive a Group 1 wastewater stream from a chemical manufacturing process unit which meets the criteria of 63.100(b)(1).
FXKSEP	N/A	40 CFR Part 63, Subpart VV	This facility is not subject to a subpart within 40 CFR 61, 61, or 63 that references 40 CFR Part 63 Subpart VV.
FXKTK0304	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
FXKTK0304	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
FXKTK0304	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
FXKTK0305	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
FXKTK0305	N/A	40 CFR Part 60, Subpart Ka	Tank was reconstructed after 7/23/84.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
FXKTK0305	N/A	40 CFR Part 60, Subpart Kb	Storage capacity is less than 151 cubic meters (39,900 gallons) and the tank stores a volatile organic liquid with maximum true vapor pressure less than 15.0 kPa (2.2 psia).
FXKTK0305	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
FXKTK0330	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
FXKTK0330	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
FXKTK0330	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
FXKTK0331	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
FXKTK0331	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
FXKTK0331	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
FXKTK0331	N/A	40 CFR Part 63, Subpart CC	This container does not meet the definition of a storage vessel as defined in 63.641. The container has a capacity less than 40 cubic meters.
FXKTK0331	N/A	40 CFR Part 63, Subpart G	These containers do not meet the definitions of a storage vessel as defined in 63.101(b). Each container has a capacity <38m3.
FXKTK0354	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
FXKTK0354	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
FXKTK0354	N/A	40 CFR Part 60, Subpart Kb	Storage capacity is greater than or equal to 151 cubic meters (39,900 gallons) and the vessel stores a volatile organic liquid with maximum true vapor pressure < 3.5 kPa (0.5 psia).
FXKTK0354	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
FXKTK3003	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
FXKTK3003	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
FXKTK3003	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
FXKTK3003	N/A	40 CFR Part 63, Subpart CC	This container does not meet the definition of a storage vessel as defined in 63.641. The container has a capacity less than 40 cubic meters.
FXKTK3003	N/A	40 CFR Part 63, Subpart G	These containers do not meet the definitions of a storage vessel as defined in 63.101(b). Each container has a capacity <38m ³ .
FXKWHB301	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is a steam generator which does not combust solid fossil or liquid fuel.
FXKWHB301	N/A	40 CFR Part 60, Subpart D	Heat input rate is not greater than 250 MMBtu/hr
FXKWHB301	N/A	40 CFR Part 60, Subpart Da	Does not meet the definition of electric utility steam generating unit as defined in 60.41a.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
FXKWHB301	N/A	40 CFR Part 60, Subpart Db	Start of construction date of May 14, 1984 is before the NSPS Db applicability date of June 19, 1984 and the boiler has not been modified or reconstructed.
FXKWHB301	N/A	40 CFR Part 60, Subpart Dc	Maximum design heat input capacity > 100 MMBtu/hr
FXKWHB301	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
GF1F201	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
GF1F201	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
GF1F227	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
GF1F227	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
HCU1F701	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
HCU1F701	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
HCU1F810	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
HCU1F810	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
HDU1F701	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
HDU1F701	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
HDU1F702	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
HDU1F702	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
HDU1F704	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
HDU1F704	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
HDU1REGVT	N/A	40 CFR Part 63, Subpart DD	The emission unit does not manage off-site material.
HDU1REGVT	N/A	40 CFR Part 63, Subpart G	This process vent is not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
HF3BONVT	N/A	40 CFR Part 63, Subpart CC	This is a catalytic reformer regeneration vent and the definition of miscellaneous process vent, as stated in 63.641, excludes catalytic reformer regeneration vents.
HF3BONVT	N/A	40 CFR Part 63, Subpart G	This process vent is not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
HF3F1	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
HF3F1	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
HF3F2	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
HF3F2	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
HF3F3	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
HF3F3	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
HF3F4	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
HF3F4	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
HF3F6	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
HF3F6	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
HF3F7	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
HF3F7	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
HF3REGVT	N/A	40 CFR Part 63, Subpart CC	This is a catalytic reformer regeneration vent and the definition of miscellaneous process vent, as stated in 63.641, excludes catalytic reformer regeneration vents.
HF3REGVT	N/A	40 CFR Part 63, Subpart DD	The emission unit does not manage off-site material.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
HF3REGVT	N/A	40 CFR Part 63, Subpart G	This process vent is not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
HF3RXVENT	N/A	40 CFR Part 63, Subpart CC	This is a catalytic reformer regeneration vent and the definition of miscellaneous process vent, as stated in 63.641, excludes catalytic reformer regeneration vents.
HF3RXVENT	N/A	40 CFR Part 63, Subpart DD	The emission unit does not manage off-site material.
HF3RXVENT	N/A	40 CFR Part 63, Subpart G	This process vent is not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
HF4D425VT	N/A	40 CFR Part 63, Subpart G	This process vent is not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
HF4F401	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
HF4F401	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
HF4F402	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
HF4F402	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
HF4F403	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
HF4F403	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
HF4F404	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
HF4F404	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
HF4F405	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
HF4F405	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
HF4REGVT	N/A	40 CFR Part 63, Subpart CC	This is a catalytic reformer regeneration vent and the definition of miscellaneous process vent, as stated in 63.641, excludes catalytic reformer regeneration vents.
HF4REGVT	N/A	40 CFR Part 63, Subpart DD	The emission unit does not manage off-site material.
HF4REGVT	N/A	40 CFR Part 63, Subpart G	This process vent is not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
HF4RXVENT	N/A	40 CFR Part 63, Subpart CC	This is a catalytic reformer regeneration vent and the definition of miscellaneous process vent, as stated in 63.641, excludes catalytic reformer regeneration vents.
HF4RXVENT	N/A	40 CFR Part 63, Subpart DD	The emission unit does not manage off-site material.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
HF4RXVENT	N/A	40 CFR Part 63, Subpart G	This process vent is not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
HGU1F101	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
HGU1F101	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
HGU1F121	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
HGU1F121	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
HONPRD	N/A	40 CFR Part 63, Subpart CC	This pressure relief device is not associated with a petroleum refining process unit meeting the criteria of §63.640(a).
HOPPERPOND	N/A	30 TAC Chapter 115, Industrial Wastewater	This facility does not contain an affected VOC wastewater that has not been treated or exempted.
HOPPERPOND	N/A	40 CFR Part 61, Subpart FF	This facility is not utilized as a controlled waste management unit per 61.342(e) compliance option. Therefore, unit specific requirements are not applicable.
HOPPERPOND	N/A	40 CFR Part 63, Subpart DD	The facility does not manage off-site material.
HOPPERPOND	N/A	40 CFR Part 63, Subpart G	The facility is not associated with a chemical manufacturing process unit which meets the criteria of 63.100(b)(1).

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
HOPPERPOND	N/A	40 CFR Part 63, Subpart QQ	This facility is not subject to a subpart within 40 CFR 60, 61, or 63 that references 40 CFR Part 63 Subpart QQ.
HU10F901	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
HU4F401	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
HU4F401	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
HU4F402	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
HU4F402	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
HU5F501	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
HU5F501	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
HU5F551	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
HU5F551	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
HU6AF101	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
HU6AF101	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
HU6BF201	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
HU6BF201	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
HU9F301	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
HU9F301	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
HU9F311	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
HU9F311	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
HU9F331	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
HU9F331	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
HU9F371	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
HU9F371	N/A	40 CFR Part 60, Subpart J	Furnace complies with the applicable provisions of 40 CFR Part 60, Subpart Ja.
HUCC D-50	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
HUCC D-50	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
HUCC D-50	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
HUCCSEP25	N/A	40 CFR Part 60, Subpart QQQ	Facility not built or modified after May 4, 1987.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
HUCCSEP25	N/A	40 CFR Part 61, Subpart FF	This facility is not utilized as a controlled waste management unit per 61.342(e) compliance option. Therefore, unit specific requirements are not applicable.
HUCCSEP25	N/A	40 CFR Part 63, Subpart DD	The facility does not manage off-site material.
HUCCSEP25	N/A	40 CFR Part 63, Subpart VV	The facility is not subject to a subpart within 40 CFR 60, 61, or 63 that references 40 CFR Part 63 Subpart VV.
HUCCSEP26	N/A	40 CFR Part 60, Subpart QQQ	Facility not built or modified after May 4, 1987.
HUCCSEP26	N/A	40 CFR Part 61, Subpart FF	This facility is not utilized as a controlled waste management unit per 61.342(e) compliance option. Therefore, unit specific requirements are not applicable.
HUCCSEP26	N/A	40 CFR Part 63, Subpart DD	The facility does not manage off-site material.
HUCCSEP26	N/A	40 CFR Part 63, Subpart VV	The facility is not subject to a subpart within 40 CFR 60, 61, or 63 that references 40 CFR Part 63 Subpart VV.
HUCCSEP27	N/A	40 CFR Part 60, Subpart QQQ	Facility not built or modified after May 4, 1987.
HUCCSEP27	N/A	40 CFR Part 61, Subpart FF	This facility is not utilized as a controlled waste management unit per 61.342(e) compliance option. Therefore, unit specific requirements are not applicable.
HUCCSEP27	N/A	40 CFR Part 63, Subpart DD	The facility does not manage off-site material.
HUCCSEP27	N/A	40 CFR Part 63, Subpart VV	The facility is not subject to a subpart within 40 CFR 60, 61, or 63 that references 40 CFR Part 63 Subpart VV.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
HUCCSEP36	N/A	40 CFR Part 60, Subpart QQQ	Facility not built or modified after May 4, 1987.
HUCCSEP36	N/A	40 CFR Part 61, Subpart FF	This facility is not utilized as a controlled waste management unit per 61.342(e) compliance option. Therefore, unit specific requirements are not applicable.
HUCCSEP36	N/A	40 CFR Part 63, Subpart DD	The facility does not manage off-site material.
HUCCSEP36	N/A	40 CFR Part 63, Subpart VV	The facility is not subject to a subpart within 40 CFR 60, 61, or 63 that references 40 CFR Part 63 Subpart VV.
INSKDRUM	N/A	30 TAC Chapter 115, Storage of VOCs	Source is a process tank and does not meet the definition of a storage tank.
INSKDRUM	N/A	40 CFR Part 60, Subpart Kb	Source is a process tank and does not meet the definition of a storage tank.
KHFF901	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
KHFF901	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
LAGOON1	N/A	30 TAC Chapter 115, Industrial Wastewater	This facility does not contain an affected VOC wastewater that has not been treated or exempted.
LAGOON1	N/A	40 CFR Part 61, Subpart FF	This facility is not utilized as a controlled waste management unit per 61.342(e) compliance option. Therefore, unit specific requirements are not applicable.
LAGOON1	N/A	40 CFR Part 63, Subpart DD	The facility does not manage off-site material.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
LAGOON1	N/A	40 CFR Part 63, Subpart G	The facility does not receive a Group 1 wastewater stream from a chemical manufacturing process unit which meets the criteria of 63.100(b)(1).
LAGOON1	N/A	40 CFR Part 63, Subpart QQ	This facility is not subject to a subpart within 40 CFR 60, 61, or 63 that references 40 CFR Part 63 Subpart QQ.
LAGOON2	N/A	30 TAC Chapter 115, Industrial Wastewater	This facility does not contain an affected VOC wastewater that has not been treated or exempted.
LAGOON2	N/A	40 CFR Part 61, Subpart FF	This facility is not utilized as a controlled waste management unit per 61.342(e) compliance option. Therefore, unit specific requirements are not applicable.
LAGOON2	N/A	40 CFR Part 63, Subpart DD	The facility does not manage off-site material.
LAGOON2	N/A	40 CFR Part 63, Subpart G	The facility does not receive a Group 1 wastewater stream from a chemical manufacturing process unit which meets the criteria of 63.100(b)(1).
LAGOON2	N/A	40 CFR Part 63, Subpart QQ	This facility is not subject to a subpart within 40 CFR 60, 61, or 63 that references 40 CFR Part 63 Subpart QQ.
LAGOON3	N/A	30 TAC Chapter 115, Industrial Wastewater	This facility does not contain an affected VOC wastewater that has not been treated or exempted.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
LAGOON3	N/A	40 CFR Part 61, Subpart FF	This facility is not utilized as a controlled waste management unit per 61.342(e) compliance option. Therefore, unit specific requirements are not applicable.
LAGOON3	N/A	40 CFR Part 63, Subpart DD	The facility does not manage off-site material.
LAGOON3	N/A	40 CFR Part 63, Subpart G	The facility does not receive a Group 1 wastewater stream from a chemical manufacturing process unit which meets the criteria of 63.100(b)(1).
LAGOON3	N/A	40 CFR Part 63, Subpart QQ	This facility is not subject to a subpart within 40 CFR 60, 61, or 63 that references 40 CFR Part 63 Subpart QQ.
LCCSEP22	N/A	40 CFR Part 60, Subpart QQQ	Facility not built or modified after May 4, 1987.
LCCSEP22	N/A	40 CFR Part 61, Subpart FF	This facility is not utilized as a controlled waste management unit per 61.342(e) compliance option. Therefore, unit specific requirements are not applicable.
LCCSEP22	N/A	40 CFR Part 63, Subpart DD	The facility does not manage off-site material.
LCCSEP22	N/A	40 CFR Part 63, Subpart VV	The facility is not subject to a subpart within 40 CFR 60, 61, or 63 that references 40 CFR Part 63 Subpart VV.
LCCSEP28	N/A	40 CFR Part 60, Subpart QQQ	Facility not built or modified after May 4, 1987.
LCCSEP28	N/A	40 CFR Part 61, Subpart FF	This facility is not utilized as a controlled waste management unit per 61.342(e) compliance option. Therefore, unit specific requirements are not applicable.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
LCCSEP28	N/A	40 CFR Part 63, Subpart DD	The facility does not manage off-site material.
LCCSEP28	N/A	40 CFR Part 63, Subpart VV	The facility is not subject to a subpart within 40 CFR 60, 61, or 63 that references 40 CFR Part 63 Subpart VV.
LCCSEP29	N/A	40 CFR Part 60, Subpart QQQ	Facility not built or modified after May 4, 1987.
LCCSEP29	N/A	40 CFR Part 61, Subpart FF	This facility is not utilized as a controlled waste management unit per 61.342(e) compliance option. Therefore, unit specific requirements are not applicable.
LCCSEP29	N/A	40 CFR Part 63, Subpart DD	The facility does not manage off-site material.
LCCSEP29	N/A	40 CFR Part 63, Subpart VV	The facility is not subject to a subpart within 40 CFR 60, 61, or 63 that references 40 CFR Part 63 Subpart VV.
LCCSEP30	N/A	40 CFR Part 60, Subpart QQQ	Facility not built or modified after May 4, 1987.
LCCSEP30	N/A	40 CFR Part 61, Subpart FF	This facility is not utilized as a control waste management unit per 61.342(e) compliance option. Therefore, unit specific requirements are not applicable.
LCCSEP30	N/A	40 CFR Part 63, Subpart DD	The facility does not manage off-site material.
LCCSEP30	N/A	40 CFR Part 63, Subpart VV	The facility is not subject to a subpart within 40 CFR 60, 61, or 63 that references 40 CFR Part 63 Subpart VV.
LCCSEP35	N/A	40 CFR Part 60, Subpart QQQ	Facility not built or modified after May 4, 1987.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
LCCSEP35	N/A	40 CFR Part 61, Subpart FF	The facility is not utilized as a controlled waste management unit per 61.342(e) compliance option. Therefore, unit specific requirements are not applicable.
LCCSEP35	N/A	40 CFR Part 63, Subpart DD	The facility does not manage off-site material.
LCCSEP35	N/A	40 CFR Part 63, Subpart VV	The facility is not subject to a subpart within 40 CFR 60, 61, or 63 that references 40 CFR Part 63 Subpart VV.
LDUB3	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
LDUFRTK1	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
LDUFRTK1	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after July 23, 1984.
LDUFRTK1	N/A	40 CFR Part 60, Subpart Kb	Storage capacity is less than 75 cubic meters (19,800 gallons).
LDUFRTK2	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
LDUFRTK2	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after July 23, 1984.
LDUFRTK2	N/A	40 CFR Part 60, Subpart Kb	Storage capacity is less than 151 cubic meters (39,900 gallons) and the tank stores a volatile organic liquid with maximum true vapor pressure less than 15.0 kPa (2.2 psia).
LECC D400	N/A	40 CFR Part 60, Subpart K	Tank was constructed, modified, or reconstructed before June 11, 1973.
LECC D400	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed, modified, or reconstructed on/before 5/18/78.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
LECC D400	N/A	40 CFR Part 60, Subpart Kb	Tank was constructed, modified, or reconstructed on/before 7/23/84.
LECC D400	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
LEFU14F804	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
LEFU14F804	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
LEFU15F601	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
LEFU15F601	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
LEFU15F602	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
LEFU15F602	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
LEFU15F603	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
LEFU15F603	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
LEFU16F506	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
LEFU16F506	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
LGOHFF926	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
LGOHFF926	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
LHU1F601	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
LHU1F601	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
LHU2F1	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
LHU2F1	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
LHU2VPS	N/A	30 TAC Chapter 115, Unit Turn & Vac System-Pet Ref	Vent stream is returned to the process.
LOC	N/A	30 TAC Chapter 115, Industrial Wastewater	This facility does not contain an affected VOC wastewater that has not been treated or exempted.
LOC	N/A	40 CFR Part 61, Subpart FF	This facility is not utilized as a controlled waste management unit per 61.342(e) compliance option. Therefore, unit specific requirements are not applicable.
LOC	N/A	40 CFR Part 63, Subpart DD	The facility does not manage off-site material.
LOC	N/A	40 CFR Part 63, Subpart G	The facility does not receive a Group 1 wastewater stream from a chemical manufacturing process unit which meets the criteria of 63.100(b)(1).

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
LOC	N/A	40 CFR Part 63, Subpart QQ	This facility is not subject to a subpart within 40 CFR 60, 61, or 63 that references 40 CFR Part 63 Subpart QQ.
LOR122	N/A	30 TAC Chapter 115, Storage of VOCs	Tank is less than 1,000 gallon capacity.
LOR122	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
LOR122	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
LOR122	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
LOR122	N/A	40 CFR Part 63, Subpart CC	Tank does not meet the definition of storage vessel because it is less than 40 cubic meters.
LOR122	N/A	40 CFR Part 63, Subpart G	Tank does not meet the definition of storage vessel because it is less than 38 cubic meters.
LOR124	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
LOR124	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
LOR124	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
LOR124	N/A	40 CFR Part 63, Subpart CC	Tank does not meet the definition of storage vessel because it is less than 38 cubic meters.
LOR124	N/A	40 CFR Part 63, Subpart G	Tank does not meet the definition of storage vessel because it is less than 38 cubic meters.
LOR134	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
LOR134	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
LOR134	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
LOR134	N/A	40 CFR Part 63, Subpart CC	Tank does not meet definition of storage vessel because it is less than 40 cubic meters.
LOR134	N/A	40 CFR Part 63, Subpart G	Tank does not meet the definition of storage vessel because it is less than 38 cubic meters.
LS219	N/A	40 CFR Part 61, Subpart FF	Facility is not a controlled waste unit per 61.342(e) option. Therefore, unit specific requirements are not applicable.
LS239	N/A	40 CFR Part 61, Subpart FF	Facility is not a controlled waste unit per 61.342(e) option. Therefore, unit specific requirements are not applicable.
LS243	N/A	40 CFR Part 61, Subpart FF	Facility is not a controlled waste unit per 61.342(e) option. Therefore, unit specific requirements are not applicable.
LXU1B5	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
LXU1B5	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
LXU1F10VT	N/A	40 CFR Part 63, Subpart DD	The emission unit does not manage off-site material.
LXU1F10VT	N/A	40 CFR Part 63, Subpart G	This process vent is not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
LXU1F9VT	N/A	40 CFR Part 63, Subpart DD	The emission unit does not manage off-site material.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
LXU1F9VT	N/A	40 CFR Part 63, Subpart G	This process vent is not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
LXU1VPS	N/A	30 TAC Chapter 115, Unit Turn & Vac System-Pet Ref	Vent stream is returned to the process.
LXU2B1	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
LXU2B1	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
LXU2B2	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
LXU2B3	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
LXU2B3	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
LXU2B4	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
LXU2B4	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
LXU2F11VT	N/A	40 CFR Part 63, Subpart DD	The emission unit does not manage off-site material.
LXU2F11VT	N/A	40 CFR Part 63, Subpart G	This process vent is not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
LXU2VPS	N/A	30 TAC Chapter 115, Unit Turn & Vac System-Pet Ref	Vent stream is returned to the process.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
MEKT13	N/A	40 CFR Part 63, Subpart DD	The emission unit does not manage off-site material.
MEKT13	N/A	40 CFR Part 63, Subpart G	This process vent is not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
MEKVPS	N/A	30 TAC Chapter 115, Unit Turn & Vac System-Pet Ref	Vent stream is returned to the process.
NFUD902VT	N/A	40 CFR Part 60, Subpart NNN	Distillation unit was constructed, modified, or reconstructed on or before December 30, 1983.
NFUD902VT	N/A	40 CFR Part 63, Subpart CC	This vent is subject to Part 63 Subpart G. As stated in 63.640(g)(7), process units and emission points subject to Part 63 Subparts F, G, H, or I are not subject to Part 63 Subpart CC.
NFUD904VT	N/A	40 CFR Part 60, Subpart NNN	Distillation unit was constructed, modified, or reconstructed on or before December 30, 1983.
NFUD904VT	N/A	40 CFR Part 63, Subpart CC	This vent is subject to Part 63 Subpart G. As stated in 63.640(g)(7), process units and emission points subject to Part 63 Subparts F, G, H, or I are not subject to Part 63 Subpart CC.
NFUF902	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
NFUF902	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
NHFF701	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
NHFF701	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
OIL D-184	N/A	30 TAC Chapter 115, Storage of VOCs	Tank is less than 1,000 gallon capacity.
OIL D-184	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
OIL D-184	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
OIL D-184	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
OIL D-184	N/A	40 CFR Part 63, Subpart CC	Tank does not meet definition of storage vessel because it is less than 40 cubic meters.
OIL D-184	N/A	40 CFR Part 63, Subpart G	Tank does not meet the definition of storage vessel because it is less than 38 cubic meters.
OIL D174	N/A	30 TAC Chapter 115, Storage of VOCs	Tank is less than 1,000 gallon capacity.
OIL D174	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
OIL D174	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
OIL D174	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
OIL D174	N/A	40 CFR Part 63, Subpart CC	Tank does not meet definition of storage vessel because it is less than 40 cubic meters.
OIL D174	N/A	40 CFR Part 63, Subpart G	Tank does not meet the definition of storage vessel because it is less than 38 cubic meters.
OIL D178	N/A	30 TAC Chapter 115, Storage of VOCs	Tank is less than 1,000 gallon capacity.
OIL D178	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
OIL D178	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
OIL D178	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
OIL D178	N/A	40 CFR Part 63, Subpart CC	Tank does not meet the definition of storage vessel because it is less than 40 cubic meters.
OIL D178	N/A	40 CFR Part 63, Subpart G	Tank does not meet the definition of storage vessel because it is less than 38 cubic meters.
OM D-311	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
OM D-311	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
OM D-311	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
OMCCFRTK	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
OMCCFRTK	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after July 23, 1984.
OMCCFRTK	N/A	40 CFR Part 60, Subpart Kb	Storage capacity is less than 75 cubic meters (19,812 gallons) and the vessel stores a volatile organic liquid with maximum true vapor pressure < 3.5 kPa (0.5 psia).
OMICE2	N/A	40 CFR Part 63, Subpart ZZZZ	Existing emergency stationary RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions.
PIT #1	N/A	30 TAC Chapter 115, Industrial Wastewater	The facility does not contain an affected VOC wastewater that has not been treated or exempted.
PIT #1	N/A	40 CFR Part 61, Subpart FF	Facility is not a controlled waste unit per 61.342(e) option. Therefore, unit specific requirements are not applicable.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
PROTRT051	N/A	40 CFR Part 61, Subpart FF	The facility is not used as a treatment process for Benzene Waste NESHAP purposes. Therefore, unit specific requirements are not applicable.
PROTRT051	N/A	40 CFR Part 63, Subpart CC	The facility does not manage Group 1 wastewater as defined in 63.641.
PROTRT051	N/A	40 CFR Part 63, Subpart DD	The facility is not an affected source as defined in 63.680(c).
PROTRT051	N/A	40 CFR Part 63, Subpart G	The facility does not manage a Group 1 wastewater stream from a chemical manufacturing process unit which meets the criteria of 63.100(b)(1).
PROTRT061	N/A	40 CFR Part 61, Subpart FF	The facility is not used as a treatment process for Benzene Waste NESHAP purposes. Therefore, unit specific requirements are not applicable.
PROTRT061	N/A	40 CFR Part 63, Subpart CC	The facility does not manage Group 1 wastewater as defined in 63.641.
PROTRT061	N/A	40 CFR Part 63, Subpart DD	The facility is not an affected source as defined in 63.680(c).
PROTRT061	N/A	40 CFR Part 63, Subpart G	The facility does not manage a Group 1 wastewater stream from a chemical manufacturing process unit which meets the criteria of 63.100(b)(1).
PROTRT071	N/A	40 CFR Part 63, Subpart DD	The facility is not an affected source as defined in 63.680(c).

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
PROTRT081	N/A	40 CFR Part 63, Subpart DD	The facility is not an affected source as defined in 63.680(c).
PROTRTBSWU	N/A	40 CFR Part 61, Subpart FF	The facility is not used as a treatment process for Benzene Waste NESHAP purposes. Therefore, unit specific requirements are not applicable.
PROTRTBSWU	N/A	40 CFR Part 63, Subpart CC	The facility does not manage Group 1 wastewater as defined in 63.641.
PROTRTBSWU	N/A	40 CFR Part 63, Subpart DD	The facility is not an affected source as defined in 63.680(c).
PROTRTBSWU	N/A	40 CFR Part 63, Subpart G	The facility does not manage a Group 1 wastewater stream from a chemical manufacturing process unit which meets the criteria of 63.100(b)(1).
PS3F1	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
PS3F1	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
PS3F2	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
PS3F2	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
PS3F306	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
PS3F306	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
PS3F5	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
PS3F5	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
PS3FRTK	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
PS3FRTK	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after July 23, 1984.
PS3FRTK	N/A	40 CFR Part 60, Subpart Kb	Storage capacity is less than 75 cubic meters (19,800 gallons).
PS3TKAVT	N/A	40 CFR Part 63, Subpart DD	The emission unit does not manage off-site material.
PS3TKAVT	N/A	40 CFR Part 63, Subpart G	This process vent is not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
PS3TKE	N/A	40 CFR Part 60, Subpart K	Tank is less than 40,000 gallon capacity.
PS3TKE	N/A	40 CFR Part 60, Subpart Ka	Tank is less than 40,000 gallon capacity.
PS3TKE	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 40 cubic meter (10,567 gallons) capacity.
PS3TKE	N/A	40 CFR Part 63, Subpart CC	This container does not meet the definition of a storage vessel as defined in 63.641. The container has a capacity less than 40 cubic meters.
PS3TKE	N/A	40 CFR Part 63, Subpart G	These containers do not meet the definitions of a storage vessel as defined in 63.101(b). Each container has a capacity <38m3.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
PS3TKEVT	N/A	40 CFR Part 63, Subpart DD	The emission unit does not manage off-site material.
PS3TKEVT	N/A	40 CFR Part 63, Subpart G	This process vent is not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
PS3TKF	N/A	40 CFR Part 60, Subpart K	Tank is less than 40,000 gallon capacity.
PS3TKF	N/A	40 CFR Part 60, Subpart Ka	Tank is less than 40,000 gallon capacity.
PS3TKF	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 40 cubic meter (10,567 gallons) capacity.
PS3TKF	N/A	40 CFR Part 63, Subpart CC	This container does not meet the definition of a storage vessel as defined in 63.641. The container has a capacity less than 40 cubic meters.
PS3TKF	N/A	40 CFR Part 63, Subpart G	These containers do not meet the definitions of a storage vessel as defined in 63.101(b). Each container has a capacity <38m ³ .
PS3TKFVT	N/A	40 CFR Part 63, Subpart DD	The emission unit does not manage off-site material.
PS3TKFVT	N/A	40 CFR Part 63, Subpart G	This process vent is not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
PS3TKG	N/A	40 CFR Part 60, Subpart K	Tank is less than 40,000 gallon capacity.
PS3TKG	N/A	40 CFR Part 60, Subpart Ka	Tank is less than 40,000 gallon capacity.
PS3TKG	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 40 cubic meter (10,567 gallons) capacity.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
PS3TKG	N/A	40 CFR Part 63, Subpart CC	This container does not meet the definition of a storage vessel as defined in 63.641. The container has a capacity less than 40 cubic meters.
PS3TKG	N/A	40 CFR Part 63, Subpart G	These containers do not meet the definitions of a storage vessel as defined in 63.101(b). Each container has a capacity <38m ³ .
PS3TKGVT	N/A	40 CFR Part 63, Subpart DD	The emission unit does not manage off-site material.
PS3TKGVT	N/A	40 CFR Part 63, Subpart G	This process vent is not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
PS3TKHVT	N/A	40 CFR Part 63, Subpart DD	The emission unit does not manage off-site material.
PS3TKHVT	N/A	40 CFR Part 63, Subpart G	This process vent is not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
PS3VPS	N/A	30 TAC Chapter 115, Unit Turn & Vac System-Pet Ref	Vent stream is returned to the process.
PS7F701A	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
PS7F701A	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
PS7F701B	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
PS7F701B	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
PS7F702A	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
PS7F702A	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
PS7F702B	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
PS7F702B	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
PS7F705	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
PS7F705	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
PS7F706	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
PS7F706	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
PS7F707	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
PS7F707	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
PS7NSEP	N/A	30 TAC Chapter 115, Industrial Wastewater	This facility does not contain an affected VOC wastewater that has not been treated or exempted.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
PS7NSEP	N/A	30 TAC Chapter 115, Water Separation	Component of wastewater treatment facility is subject to 115.140 (Industrial Wastewater) and is exempt from the requirements of 115.131 (Water Separation).
PS7NSEP	N/A	40 CFR Part 60, Subpart QQQ	Facility not built or modified after May 4, 1987.
PS7NSEP	N/A	40 CFR Part 61, Subpart FF	This facility is not utilized as a controlled waste management unit per 61.342(e) compliance option. Therefore, unit specific requirements are not applicable.
PS7NSEP	N/A	40 CFR Part 63, Subpart DD	The facility does not manage off-site material.
PS7NSEP	N/A	40 CFR Part 63, Subpart G	The facility does not receive a Group 1 wastewater stream from a chemical manufacturing process unit which meets the criteria of 63.100(b)(1).
PS7NSEP	N/A	40 CFR Part 63, Subpart VV	This facility is not subject to a subpart within 40 CFR 61, 61, or 63 that references 40 CFR Part 63 Subpart VV.
PS7VPS	N/A	30 TAC Chapter 115, Unit Turn & Vac System-Pet Ref	Vent stream is returned to the process.
PS8F801	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
PS8F801	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
PS8F802	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
PS8F802	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
PS8F803	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
PS8F803	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
PS8F804	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
PS8F804	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
QAL258	N/A	30 TAC Chapter 117, Subchapter B	Stationary internal combustion engine used in research and testing.
QAL258	N/A	40 CFR Part 60, Subpart J	Combustion device does not combust fuel gas as defined in 60.101(d).
QAL259	N/A	30 TAC Chapter 117, Subchapter B	Stationary internal combustion engine used in research and testing.
QAL259	N/A	40 CFR Part 60, Subpart J	Combustion device does not combust fuel gas as defined in 60.101(d).
QAL260	N/A	30 TAC Chapter 117, Subchapter B	Stationary internal combustion engine used in research and testing.
QAL260	N/A	40 CFR Part 60, Subpart J	Combustion device does not combust fuel gas as defined in 60.101(d).
QAL261	N/A	30 TAC Chapter 117, Subchapter B	Stationary internal combustion engine used in research and testing.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
QAL261	N/A	40 CFR Part 60, Subpart J	Combustion device does not combust fuel gas as defined in 60.101(d).
QAL264	N/A	30 TAC Chapter 117, Subchapter B	Stationary internal combustion engine used in research and testing.
QAL264	N/A	40 CFR Part 60, Subpart J	Combustion device does not combust fuel gas as defined in 60.101(d).
QAL265	N/A	30 TAC Chapter 117, Subchapter B	Stationary internal combustion engine used in research and testing.
QAL265	N/A	40 CFR Part 60, Subpart J	Combustion device does not combust fuel gas as defined in 60.101(d).
QAL266	N/A	30 TAC Chapter 117, Subchapter B	Stationary internal combustion engine used in research and testing.
QAL266	N/A	40 CFR Part 60, Subpart J	Combustion device does not combust fuel gas as defined in 60.101(d).
QAL267	N/A	30 TAC Chapter 117, Subchapter B	Stationary internal combustion engine used in research and testing.
QAL267	N/A	40 CFR Part 60, Subpart J	Combustion device does not combust fuel gas as defined in 60.101(d).
QAL268	N/A	30 TAC Chapter 117, Subchapter B	Stationary internal combustion engine used in research and testing.
QAL268	N/A	40 CFR Part 60, Subpart J	Combustion device does not combust fuel gas as defined in 60.101(d).
QAL269	N/A	30 TAC Chapter 117, Subchapter B	Stationary internal combustion engine used in research and testing.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
QAL269	N/A	40 CFR Part 60, Subpart J	Combustion device does not combust fuel gas as defined in 60.101(d).
QAL270	N/A	30 TAC Chapter 117, Subchapter B	Stationary internal combustion engine used in research and testing.
QAL270	N/A	40 CFR Part 60, Subpart J	Combustion device does not combust fuel gas as defined in 60.101(d).
QAL271	N/A	30 TAC Chapter 117, Subchapter B	Stationary internal combustion engine used in research and testing.
QAL271	N/A	40 CFR Part 60, Subpart J	Combustion device does not combust fuel gas as defined in 60.101(d).
QAL272	N/A	30 TAC Chapter 117, Subchapter B	Stationary internal combustion engine used in research and testing.
QAL272	N/A	40 CFR Part 60, Subpart J	Combustion device does not combust fuel gas as defined in 60.101(d).
QAL273	N/A	30 TAC Chapter 117, Subchapter B	Stationary internal combustion engine used in research and testing.
QAL273	N/A	40 CFR Part 60, Subpart J	Combustion device does not combust fuel gas as defined in 60.101(d).
RACK10	N/A	40 CFR Part 61, Subpart BB	Land based loading rack which does not load benzene into tank trucks or railcars at a benzene production facility or bulk terminal.
RACK10	N/A	40 CFR Part 63, Subpart G	This transfer rack is not associated with a chemical manufacturing process unit that meets the criteria specified in 63.100(b)(1).

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
RACK11	N/A	40 CFR Part 61, Subpart BB	Land based loading rack which does not load benzene into tank trucks or railcars at a benzene production facility or bulk terminal.
RACK13	N/A	40 CFR Part 61, Subpart BB	Land based loading rack which does not load benzene into tank trucks or railcars at a benzene production facility or bulk terminal.
RACK19	N/A	40 CFR Part 61, Subpart BB	Land based loading rack which does not load benzene into tank trucks or railcars at a benzene production facility or bulk terminal.
RACK19	N/A	40 CFR Part 63, Subpart G	This transfer rack is not associated with a chemical manufacturing process unit that meets the criteria specified in 63.100(b)(1).
RACK22	N/A	40 CFR Part 61, Subpart BB	Land based loading rack which does not load benzene into tank trucks or railcars at a benzene production facility or bulk terminal.
RACK26	N/A	40 CFR Part 61, Subpart BB	Land based loading rack which does not load benzene into tank trucks or railcars at a benzene production facility or bulk terminal.
RACK2A	N/A	40 CFR Part 61, Subpart BB	Land based loading rack which does not load benzene into tank trucks or railcars at a benzene production facility or bulk terminal.
RACK3	N/A	40 CFR Part 61, Subpart BB	Land based loading rack which does not load benzene into tank trucks or railcars at a benzene production facility or bulk terminal.
RACK8	N/A	40 CFR Part 61, Subpart BB	Land based loading rack which does not load benzene into tank trucks or railcars at a benzene production facility or bulk terminal.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
RACK8	N/A	40 CFR Part 63, Subpart G	This transfer rack is not associated with a chemical manufacturing process unit that meets the criteria specified in 63.100(b)(1).
RACKSTO	N/A	30 TAC Chapter 117, Subchapter B	Incinerator with a maximum rated capacity less than 40 MMBtu/hr.
RACKSTO	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
RAILDEG	N/A	40 CFR Part 63, Subpart T	Degreaser is not a batch vapor, in-line vapor, in-line cold, and batch cold solvent cleaning machine that uses any solvent containing halogenated HAPs, in a total concentration > 5% by weight, as a cleaning and/or drying agent.
RECLAIMPIT	N/A	40 CFR Part 63, Subpart DD	The emission unit does not manage off-site material.
RECLAIMPIT	N/A	40 CFR Part 63, Subpart G	This process vent is not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
REFLABDR	N/A	30 TAC Chapter 115, Industrial Wastewater	This facility does not contain an affected VOC wastewater that has not been treated or exempted.
REFLABDR	N/A	40 CFR Part 61, Subpart FF	Facility is not a controlled waste unit per 61.342(e) option. Therefore, unit specific requirements are not applicable.
REFLABSEP	N/A	40 CFR Part 60, Subpart QQQ	Facility not built or modified after May 4, 1987.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
REFLABSEP	N/A	40 CFR Part 61, Subpart FF	This facility is not utilized as a controlled waste management unit per 61.342(e) compliance option. Therefore, unit specific requirements are not applicable.
REFLABSEP	N/A	40 CFR Part 63, Subpart DD	The facility does not manage off-site material.
REFLABSEP	N/A	40 CFR Part 63, Subpart VV	The facility is not subject to a subpart within 40 CFR 60, 61, 63 that references 40 CFR Part 63 Subpart VV.
REFTOTE	N/A	30 TAC Chapter 115, Storage of VOCs	Tank is less than 1,000 gallon capacity.
REFTOTE	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
REFTOTE	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
REFTOTE	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
REFTOTE	N/A	40 CFR Part 63, Subpart CC	Tank does not meet definition of storage vessel because it is less than 40 cubic meters.
REFTOTE	N/A	40 CFR Part 63, Subpart G	Tank does not meet the definition of storage vessel because it is less than 38 cubic meters.
RGDIESELLD	N/A	30 TAC Chapter 115, Loading and Unloading of VOC	Loading operation in motor vehicle fuel dispensing service.
RGUSTALD	N/A	30 TAC Chapter 115, Loading and Unloading of VOC	Loading operation in motor vehicle fuel dispensing service.
RGUSTBLD	N/A	30 TAC Chapter 115, Loading and Unloading of VOC	Loading operation in motor vehicle fuel dispensing service.
RHCF301	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
RHCF301	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
RHCF302	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
RHCF302	N/A	40 CFR Part 60, Subpart J	Furnace complies with the applicable provisions of 40 CFR Part 60, Subpart Ja.
RHCVPS	N/A	30 TAC Chapter 115, Unit Turn & Vac System-Pet Ref	Vent stream is returned to the process.
RW0173	N/A	40 CFR Part 60, Subpart K	Constructed after 5/19/1978
RW0173	N/A	40 CFR Part 60, Subpart Ka	Constructed after 7/23/1984
RW0173	N/A	40 CFR Part 60, Subpart Kb	Capacity < 40 cubic meters
RW0173	N/A	40 CFR Part 63, Subpart CC	Capacity < 40 cubic meters and does not meet the definition of a storage vessel
RW0173	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
RW0336	N/A	40 CFR Part 60, Subpart K	Tank is less than 40,000 gallon capacity.
RW0336	N/A	40 CFR Part 60, Subpart Ka	Tank is less than 40,000 gallon capacity.
RW0336	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
RW0336	N/A	40 CFR Part 63, Subpart CC	Tank does not meet definition of storage vessel because it is less than 40 cubic meters.
RW0336	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
RW0346	N/A	40 CFR Part 60, Subpart K	Tank is less than 40,000 gallon capacity.
RW0346	N/A	40 CFR Part 60, Subpart Ka	Tank is less than 40,000 gallon capacity.
RW0346	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
RW0346	N/A	40 CFR Part 63, Subpart CC	This container does not meet the definition of a storage vessel as defined in 63.641. The container has a capacity less than 40 cubic meters.
RW0346	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
RW0749	N/A	40 CFR Part 60, Subpart K	Tank is less than 40,000 gallons capacity.
RW0749	N/A	40 CFR Part 60, Subpart Ka	Tank is less than 40,000 gallon capacity.
RW0749	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
RW0749	N/A	40 CFR Part 63, Subpart CC	Tank does not meet definition of storage vessel because it is less than 40 cubic meters.
RW0749	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
RW0816	N/A	40 CFR Part 60, Subpart K	Tank is less than 40,000 gallon capacity.
RW0816	N/A	40 CFR Part 60, Subpart Ka	Tank is less than 40,000 gallon capacity.
RW0816	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
RW0816	N/A	40 CFR Part 63, Subpart CC	This container does not meet the definition of a storage vessel as defined in 63.641. The container has a capacity less than 40 cubic meters.
RW0816	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
S&S D-1	N/A	30 TAC Chapter 115, Storage of VOCs	Tank is less than 1,000 gallon capacity.
S&S D-1	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
S&S D-1	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
S&S D-1	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
S&S D-1	N/A	40 CFR Part 63, Subpart CC	Tank does not meet the definition of storage vessel because it is less than 40 cubic meters.
S&S D-1	N/A	40 CFR Part 63, Subpart G	Tank does not meet the definition of storage vessel because it is less than 38 cubic meters.
S&S D-2	N/A	30 TAC Chapter 115, Storage of VOCs	Tank is less than 1,000 gallon capacity.
S&S D-2	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
S&S D-2	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
S&S D-2	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
S&S D-2	N/A	40 CFR Part 63, Subpart CC	Tank does not meet the definition of storage vessel because it is less than 38 cubic meters.
S&S D-2	N/A	40 CFR Part 63, Subpart G	Tank does not meet the definition of storage vessel because it is less than 38 cubic meters.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
S&S D-409	N/A	30 TAC Chapter 115, Storage of VOCs	Tank is less than 1,000 gallon capacity.
S&S D-409	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
S&S D-409	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
S&S D-409	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
S&S D-409	N/A	40 CFR Part 63, Subpart CC	Tank does not meet the definition of storage vessel because it is less than 40 cubic meters.
S&S D-409	N/A	40 CFR Part 63, Subpart G	Tank does not meet the definition of storage vessel because it is less than 38 cubic meters.
SCU2CLAUSA	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
SCU2CLAUSB	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
SCU2CLAUSC	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
SCU2CLAUSD	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
SCU2F529	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
SCU2F549	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
SCU2F702	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
SCU2F703	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
SCU2F703	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
SCU2RACKLD	N/A	30 TAC Chapter 115, Loading and Unloading of VOC	Product loaded is not a VOC.
SCU2RACKLD	N/A	40 CFR Part 63, Subpart G	This transfer rack is not associated with a chemical manufacturing process unit that meets the criteria specified in 63.100(b)(1).
SCU2T601	N/A	40 CFR Part 63, Subpart CC	This is a sulfur plant vent and the definition of miscellaneous process vent, as stated in 63.641, excludes sulfur plant vents.
SCU2T601	N/A	40 CFR Part 63, Subpart DD	The emission unit does not manage off-site material.
SCU2T601	N/A	40 CFR Part 63, Subpart G	This process vent is not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
SCU2TK0502	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
SCU2TK0502	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
SCU2TK0502	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
SCU2TK0502	N/A	40 CFR Part 63, Subpart CC	This container does not meet the definition of a storage vessel as defined in 63.641. The container has a capacity less than 40 cubic meters.
SCU2TK0502	N/A	40 CFR Part 63, Subpart G	These containers do not meet the definitions of a storage vessel as defined in 63.101(b). Each container has a capacity <38m ³ .

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
SCU2VPS	N/A	30 TAC Chapter 115, Unit Turn & Vac System-Pet Ref	Vent stream is returned to process.
SDUD8AVT	N/A	40 CFR Part 63, Subpart G	This process vent is not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
SDUF2	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
SDUF2	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
SDUF3	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
SDUF3	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
SEAL OIL-D	N/A	30 TAC Chapter 115, Storage of VOCs	Tank is less than 1,000 gallon capacity.
SEAL OIL-D	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
SEAL OIL-D	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
SEAL OIL-D	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
SEAL OIL-D	N/A	40 CFR Part 63, Subpart CC	Tank does not meet definition of storage vessel because it is less than 40 cubic meters.
SEAL OIL-D	N/A	40 CFR Part 63, Subpart G	Tank does not meet the definition of storage vessel because it is less than 38 cubic meters.
SFUF721	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
SFUF721	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
SFUF731	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
SFUF731	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
SFUF751	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
SFUF751	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
SHUF702	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
SHUF702	N/A	40 CFR Part 60, Subpart Ja	Construction/reconstruction/modification dates before 5/14/07.
SRB-1	N/A	30 TAC Chapter 115, Industrial Wastewater	This facility is a wet weather retention basin which is exempt from the requirements of Industrial Wastewater.
SRB-1	N/A	40 CFR Part 61, Subpart FF	This facility is not utilized as a controlled waste management unit per 61.342(e) compliance option. Therefore, unit specific requirements are not applicable.
SRB-1	N/A	40 CFR Part 63, Subpart DD	The facility does not manage off-site material.
SRB-1	N/A	40 CFR Part 63, Subpart G	The facility does not receive a Group 1 wastewater stream from a chemical manufacturing process unit which meets the criteria of 63.100(b)(1).

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
SRB-1	N/A	40 CFR Part 63, Subpart QQ	This facility is not subject to a subpart within 40 CFR 60, 61, or 63 that references 40 CFR Part 63 Subpart QQ.
SRB-2	N/A	30 TAC Chapter 115, Industrial Wastewater	This facility is a wet weather retention basin which is exempt from the requirements of Industrial Wastewater.
SRB-2	N/A	40 CFR Part 61, Subpart FF	This facility is not utilized as a controlled waste management unit per 61.342(e) compliance option. Therefore, unit specific requirements are not applicable.
SRB-2	N/A	40 CFR Part 63, Subpart DD	The facility does not manage off-site material.
SRB-2	N/A	40 CFR Part 63, Subpart G	The facility does not receive a Group 1 wastewater stream from a chemical manufacturing process unit which meets the criteria of 63.100(b)(1).
SRB-2	N/A	40 CFR Part 63, Subpart QQ	This facility is not subject to a subpart within 40 CFR 60, 61, or 63 that references 40 CFR Part 63 Subpart QQ.
SULFIXTK	N/A	40 CFR Part 60, Subpart Kb	Storage capacity is less than 75 cubic meters (19,800 gallons).
TANK-B	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TANK-B	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
TANK-B	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
TANK-D	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TANK-D	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

TK1019	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
TK1020	N/A	40 CFR Part 60, Subpart K	True vapor pressure of the petroleum liquid is less than 10.3 kPa (1.5 psia) and the vessel is storing a petroleum liquid with a Reid vapor pressure less than 6.9 kPa and maximum true vapor pressure less than 6.9 kPa (1.0 psia).
TK1020	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed, modified, or reconstructed on/before 5/18/78.
TK1020	N/A	40 CFR Part 60, Subpart Kb	Tank was constructed, modified, or reconstructed on/before 7/23/84.
TK1020	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
TK1021	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TK1021	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after July 23, 1984.
TK1021	N/A	40 CFR Part 60, Subpart Kb	Tank stores VOC with true vapor pressure < 0.5 psia.
TK1021	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
TK1022	N/A	40 CFR Part 60, Subpart K	True vapor pressure of the petroleum liquid is less than 10.3 kPa (1.5 psia) and the vessel is storing a petroleum liquid with a Reid vapor pressure less than 6.9 kPa and maximum true vapor pressure less than 6.9 kPa (1.0 psia).
TK1022	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed, modified, or reconstructed on/before 5/18/78.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
TK1022	N/A	40 CFR Part 60, Subpart Kb	Tank was constructed, modified, or reconstructed on/before 7/23/84.
TK1022	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
TK1023	N/A	40 CFR Part 60, Subpart K	True vapor pressure of the petroleum liquid is less than 10.3 kPa (1.5 psia) and the vessel is storing a petroleum liquid with a Reid vapor pressure less than 6.9 kPa and maximum true vapor pressure less than 6.9 kPa (1.0 psia).
TK1023	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed, modified, or reconstructed on/before 5/18/78.
TK1023	N/A	40 CFR Part 60, Subpart Kb	Tank was constructed, modified, or reconstructed on/before 7/23/84.
TK1023	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
TK1024	N/A	40 CFR Part 60, Subpart K	Group 2 storage vessel under MACT CC subject to NSPS K but not to the control requirements of NSPS K, is required to comply only with MACT CC.
TK1024	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed, modified, or reconstructed on/before 5/18/78.
TK1024	N/A	40 CFR Part 60, Subpart Kb	Tank was constructed, modified, or reconstructed on/before 7/23/84.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
TK1024	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
TK1025	N/A	40 CFR Part 60, Subpart K	Tank was constructed, modified, or reconstructed before June 11, 1973.
TK1025	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed, modified, or reconstructed on/before 5/18/78.
TK1025	N/A	40 CFR Part 60, Subpart Kb	Tank was constructed, modified, or reconstructed on/before 7/23/84.
TK1025	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
TK1026	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TK1026	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
TK1026	N/A	40 CFR Part 60, Subpart QQQ	Facility contains stream subject to MACT CC. Therefore, facility is not subject to 60QQQ.
TK1026	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
TK1028	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TK1028	N/A	40 CFR Part 60, Subpart Ka	True vapor pressure of the petroleum liquid is less than 10.3 kPa (1.5 psia) and the vessel is storing a petroleum liquid with a Reid vapor pressure less than 6.9 kPa and maximum true vapor pressure less than 6.9 kPa (1.0 psia).

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
TK1028	N/A	40 CFR Part 60, Subpart Kb	Tank was constructed, modified, or reconstructed on/before 7/23/84.
TK1028	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
TK1029	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TK1029	N/A	40 CFR Part 60, Subpart Ka	True vapor pressure of the petroleum liquid is less than 10.3 kPa (1.5 psia) and the vessel is storing a petroleum liquid with a Reid vapor pressure less than 6.9 kPa and maximum true vapor pressure less than 6.9 kPa (1.0 psia).
TK1029	N/A	40 CFR Part 60, Subpart Kb	Tank was constructed, modified, or reconstructed on/before 7/23/84.
TK1029	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
TK1030	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TK1030	N/A	40 CFR Part 60, Subpart Ka	True vapor pressure of the petroleum liquid is less than 10.3 kPa (1.5 psia) and the vessel is storing a petroleum liquid with a Reid vapor pressure less than 6.9 kPa and maximum true vapor pressure less than 6.9 kPa (1.0 psia).
TK1030	N/A	40 CFR Part 60, Subpart Kb	Tank was constructed, modified, or reconstructed on/before 7/23/84.
TK1030	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
TK1031	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TK1031	N/A	40 CFR Part 60, Subpart Ka	True vapor pressure of the petroleum liquid is less than 10.3 kPa (1.5 psia) and the vessel is storing a petroleum liquid with a Reid vapor pressure less than 6.9 kPa and maximum true vapor pressure less than 6.9 kPa (1.0 psia).
TK1031	N/A	40 CFR Part 60, Subpart Kb	Tank was constructed, modified, or reconstructed on/before 7/23/84.
TK1031	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
TK1032	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TK1032	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
TK1032	N/A	40 CFR Part 60, Subpart QQQ	Facility contains stream subject to MACT CC. Therefore facility is not subject to 60QQQ.
TK1032	N/A	40 CFR Part 63, Subpart CC	This container does not meet the definition of a storage vessel as defined in 63.641. This container stores wastewater as defined in 63.641.
TK1033	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TK1033	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
TK1033	N/A	40 CFR Part 60, Subpart QQQ	Facility contains stream subject to MACT CC. Therefore, facility is not subject to 60QQQ.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
TK1033	N/A	40 CFR Part 63, Subpart CC	This container does not meet the definition of a storage vessel as defined in 63.641. This container stores wastewater as defined in 63.641.
TK1070	N/A	40 CFR Part 60, Subpart K	Tank was reconstructed after 5/18/78.
TK1070	N/A	40 CFR Part 60, Subpart Ka	Tank was reconstructed after 7/23/84.
TK1070	N/A	40 CFR Part 60, Subpart QQQ	Facility not built or modified after May 4, 1987.
TK1070	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
TK1071	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TK1071	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after July 23, 1984.
TK1080	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TK1080	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
TK1080	N/A	40 CFR Part 60, Subpart Kb	Storage capacity is greater than or equal to 151 cubic meters (39,900 gallons) and the vessel stores a volatile organic liquid with maximum true vapor pressure < 3.5 k Pa (0.5 psia).
TK1080	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
TK1080FH	N/A	30 TAC Chapter 112, Sulfur Compounds	This combustion unit is either a furnace or heater which does not combust liquid fuel.
TK1080FH	N/A	30 TAC Chapter 117, Commercial	Process heater with a maximum rated capacity of less than 5 MMBtu/hr.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
TK1080FH	N/A	40 CFR Part 60, Subpart J	The combustion device does not combust fuel gas as defined in 60.101
TK1081	N/A	40 CFR Part 60, Subpart K	Tank was constructed, modified, or reconstructed before June 11, 1973.
TK1081	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed, modified, or reconstructed on/before 5/18/78.
TK1081	N/A	40 CFR Part 60, Subpart Kb	Tank was constructed, modified, or reconstructed on/before 7/23/84.
TK1081	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
TK1084	N/A	40 CFR Part 60, Subpart K	Group 2 storage vessel under MACT CC subject to NSPS K but not to the control requirements of NSPS K, is required to comply only with MACT CC.
TK1084	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed, modified, or reconstructed on/before 5/18/78.
TK1084	N/A	40 CFR Part 60, Subpart Kb	Tank was constructed, modified, or reconstructed on/before 7/23/84.
TK1084	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
TK1086	N/A	40 CFR Part 60, Subpart K	Tank was constructed, modified, or reconstructed before June 11, 1973.
TK1086	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed, modified, or reconstructed on/before 5/18/78.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
TK1086	N/A	40 CFR Part 60, Subpart Kb	Tank was constructed, modified, or reconstructed on/before 7/23/84.
TK1087	N/A	40 CFR Part 60, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
TK1087	N/A	40 CFR Part 60, Subpart K	Tank was constructed, modified, or reconstructed before June 11, 1973.
TK1087	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed, modified, or reconstructed on/before 5/18/78.

TK1180	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TK1180	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
TK1180	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
TK1181	N/A	40 CFR Part 60, Subpart K	Tank was constructed, modified, or reconstructed before June 11, 1973.
TK1181	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed, modified, or reconstructed on/before 7/23/84.
TK1181	N/A	40 CFR Part 60, Subpart Kb	Tank was constructed, modified, or reconstructed on/before 7/23/84.
TK1181	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
TK1182	N/A	40 CFR Part 60, Subpart K	Tank was constructed, modified, or reconstructed before June 11, 1973.
TK1182	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed, modified, or reconstructed on/before 5/18/78.
TK1182	N/A	40 CFR Part 60, Subpart Kb	Tank was constructed, modified, or reconstructed on/before 7/23/84.
TK1182	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
TK1184	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TK1184	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after July 23, 1984.
TK1203	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TK1203	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
TK1203	N/A	40 CFR Part 60, Subpart Kb	Storage capacity is greater than or equal to 151 cubic meters (39,900 gallons) and the vessel stores a volatile organic liquid with maximum true vapor pressure < 3.5 kPa (0.5 psia).
TK1203	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
TK1215	N/A	40 CFR Part 60, Subpart K	Tank is a pressure vessel designed to operate in excess of 15 psig without emissions to the atmosphere.
TK1215	N/A	40 CFR Part 60, Subpart Ka	Tank is a pressure vessel designed to operate in excess of 204.9 kPa and without emissions to the atmosphere.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
TK1215	N/A	40 CFR Part 60, Subpart Kb	Tank is a pressure vessel designed to operate in excess of 204.9 kPa and without emissions to the atmosphere.
TK1215	N/A	40 CFR Part 63, Subpart CC	This container does not meet the definition of a storage vessel as defined in 63.641. It is a pressure vessel designed to operate in excess of 204.9 kPa and without emissions to the atmosphere.
TK1215	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
TK1227	N/A	40 CFR Part 60, Subpart K	Tank was constructed, modified, or reconstructed before June 11, 1973.
TK1227	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed, modified, or reconstructed on/before 5/18/78.
TK1227	N/A	40 CFR Part 60, Subpart Kb	Tank was constructed, modified, or reconstructed on/before 7/23/84.
TK1227	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
TK1228	N/A	40 CFR Part 60, Subpart K	Tank was constructed, modified, or reconstructed before June 11, 1973.
TK1228	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed, modified, or reconstructed on/before 5/18/78.
TK1228	N/A	40 CFR Part 60, Subpart Kb	Tank was constructed, modified, or reconstructed on/before 7/23/84.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
TK1228	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
TK1229	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TK1229	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after July 23, 1984.
TK1229	N/A	40 CFR Part 60, Subpart Kb	Tank stores VOC with true vapor pressure < 0.5 psia.
TK1256	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TK1256	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
TK1256	N/A	40 CFR Part 60, Subpart Kb	Storage capacity is greater than or equal to 151 cubic meters (39,900 gallons) and the vessel stores a volatile organic liquid with maximum true vapor pressure < 3.5 kPa (0.5 psia).

TK2038	N/A	40 CFR Part 60, Subpart Ka	Tank is a pressure vessel designed to operate in excess of 204.9 kPa without emissions to the atmosphere.
TK2038	N/A	40 CFR Part 60, Subpart Kb	Tank is a pressure vessel designed to operate in excess of 204.9 kPa and without emissions to the atmosphere.
TK2038	N/A	40 CFR Part 63, Subpart CC	This container does not meet the definition of a storage vessel as defined in 63.641. It is a pressure vessel designed to operate in excess of 204.9 kPa and without emissions to the atmosphere.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
TK2038	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
TK2039	N/A	40 CFR Part 60, Subpart K	Tank is a pressure vessel designed to operate in excess of 15 psig without emissions to the atmosphere.
TK2039	N/A	40 CFR Part 60, Subpart Ka	Tank is a pressure vessel designed to operate in excess of 204.9 kPa without emissions to the atmosphere.
TK2039	N/A	40 CFR Part 60, Subpart Kb	Tank is a pressure vessel designed to operate in excess of 204.9 kPa and without emissions to the atmosphere.
TK2039	N/A	40 CFR Part 63, Subpart CC	This container does not meet the definition of a storage vessel as defined in 63.641. It is a pressure vessel designed to operate in excess of 204.9 kPa and without emissions to the atmosphere.
TK2039	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
TK81746	N/A	30 TAC Chapter 115, Storage of VOCs	Tank is less than 1,000 gallon capacity.
TK81746	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TK81746	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
TK81746	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
TK81746	N/A	40 CFR Part 63, Subpart CC	Tank does not meet definition of storage vessel because it is less than 40 cubic meters.
TK81746	N/A	40 CFR Part 63, Subpart G	Tank does not meet the definition of storage vessel because it is less than 38 cubic meters.
TKC23172	N/A	30 TAC Chapter 115, Storage of VOCs	Tank is less than 1,000 gallon capacity.
TKC23172	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TKC23172	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
TKC23172	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
TKC23172	N/A	40 CFR Part 63, Subpart CC	Tank does not meet definition of storage vessel because it is less than 40 cubic meters.
TKC23172	N/A	40 CFR Part 63, Subpart G	Tank does not meet the definition of storage vessel because it is less than 38 cubic meters.
TKC23224	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TKC23224	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
TKC23224	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
TKC23225	N/A	30 TAC Chapter 115, Storage of VOCs	Tank is less than 1,000 gallon capacity.
TKC23225	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TKC23225	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
TKC23225	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
TKC23225	N/A	40 CFR Part 63, Subpart CC	Tank does not meet definition of storage vessel because it is less than 40 cubic meters.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
TKC23225	N/A	40 CFR Part 63, Subpart G	Tank does not meet the definition of storage vessel because it is less than 38 cubic meters.
TKC23226	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TKC23226	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
TKC23226	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
TKC23227	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TKC23227	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
TKC23227	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
TKC23228	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TKC23228	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
TKC23228	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
TKC23229	N/A	30 TAC Chapter 115, Storage of VOCs	Tank is less than 1,000 gallon capacity.
TKC23229	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TKC23229	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
TKC23229	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
TKC23229	N/A	40 CFR Part 63, Subpart CC	Tank does not meet definition of storage vessel because it is less than 40 cubic meters.
TKC23229	N/A	40 CFR Part 63, Subpart G	Tank does not meet the definition of storage vessel because it is less than 38 cubic meters.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
TKC23249	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TKC23249	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
TKC23249	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
TKC23250	N/A	30 TAC Chapter 115, Storage of VOCs	Tank is less than 1,000 gallon capacity.
TKC23250	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TKC23250	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
TKC23250	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
TKC23250	N/A	40 CFR Part 63, Subpart CC	Tank does not meet definition of storage vessel because it is less than 40 cubic meters.
TKC23250	N/A	40 CFR Part 63, Subpart G	Tank does not meet the definition of storage vessel because it is less than 38 cubic meters.
TR115	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TR115	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
TR115	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
TR116	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TR116	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
TR116	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
TR117	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TR117	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
TR117	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
TR118	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TR118	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
TR118	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
TR119	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TR119	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
TR119	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
TR120	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TR120	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
TR120	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
TR121	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TR121	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
TR121	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
TR122	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
TR122	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
TR122	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
TR123	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
TR123	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
TR123	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 75 cubic meters (19,800 gallons) capacity.
TR123	N/A	40 CFR Part 63, Subpart CC	This container does not meet the definition of a storage vessel as defined in 63.641. The container has a capacity less than 40 cubic meters.
TR123	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
UOC	N/A	30 TAC Chapter 115, Industrial Wastewater	This facility does not contain an affected VOC wastewater that has not been treated or exempted.
UOC	N/A	40 CFR Part 61, Subpart FF	This facility is not utilized as a controlled waste management unit per 61.342(e) compliance option. Therefore, unit specific requirements are not applicable.
UOC	N/A	40 CFR Part 63, Subpart DD	The facility does not manage off-site material.
UOC	N/A	40 CFR Part 63, Subpart G	The facility does not receive a Group 1 wastewater stream from a chemical manufacturing process unit which meets the criteria of 63.100(b)(1).
UOC	N/A	40 CFR Part 63, Subpart QQ	This facility is not subject to a subpart within 40 CFR 60, 61, or 63 that references 40 CFR Part 63 Subpart QQ.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
UST13	N/A	30 TAC Chapter 115, Storage of VOCs	Underground storage tank, less than 25,000 gallon capacity, dispensing gasoline to motor vehicles.
UST13	N/A	40 CFR Part 60, Subpart K	Tank is less than 40,000 gallon capacity.
UST13	N/A	40 CFR Part 60, Subpart Ka	Tank is less than 40,000 gallon capacity.
UST13	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 40 cubic meter (10,567 gallons) capacity.
UST13	N/A	40 CFR Part 63, Subpart CC	This container does not meet the definition of a storage vessel as defined in 63.641. The container has a capacity less than 40 cubic meters.
UST13	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
UST14	N/A	30 TAC Chapter 115, Storage of VOCs	Underground storage tank, less than 25,000 gallon capacity, dispensing gasoline to motor vehicles.
UST14	N/A	40 CFR Part 60, Subpart K	Tank is less than 40,000 gallon capacity.
UST14	N/A	40 CFR Part 60, Subpart Ka	Tank is less than 40,000 gallon capacity.
UST14	N/A	40 CFR Part 60, Subpart Kb	Tank is less than 40 cubic meter (10,567 gallons) capacity.
UST14	N/A	40 CFR Part 63, Subpart CC	This container does not meet the definition of a storage vessel as defined in 63.641. The container has a capacity less than 40 cubic meters.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
UST14	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).
VSD	N/A	30 TAC Chapter 115, Industrial Wastewater	This facility does not contain an affected VOC wastewater that has not been treated or exempted.
VSD	N/A	40 CFR Part 61, Subpart FF	This facility is not utilized as a controlled waste management unit per 61.342(e) compliance option. Therefore, unit specific requirements are not applicable.
VSD	N/A	40 CFR Part 63, Subpart DD	The facility does not manage off-site material.
VSD	N/A	40 CFR Part 63, Subpart G	The facility is not associated with a chemical manufacturing process unit which meets the criteria of 63.100(b)(1).
VSD	N/A	40 CFR Part 63, Subpart QQ	This facility is not subject to a subpart within 40 CFR 60, 61, or 63 that references 40 CFR Part 63 Subpart QQ.
WOU	N/A	30 TAC Chapter 115, Industrial Wastewater	This facility does not contain an affected VOC wastewater that has not been treated or exempted.
WOU	N/A	40 CFR Part 61, Subpart FF	This facility is not utilized as a controlled waste management unit per 61.342(e) compliance option. Therefore, unit specific requirements are not applicable.
WOU	N/A	40 CFR Part 63, Subpart DD	The facility does not manage off-site material.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
WOU	N/A	40 CFR Part 63, Subpart G	The facility does not receive a Group 1 wastewater stream from a chemical manufacturing process unit which meets the criteria of 63.100(b)(1).
WOU	N/A	40 CFR Part 63, Subpart QQ	This facility is not subject to a subpart within 40 CFR 60, 61, or 63 that references 40 CFR Part 63 Subpart QQ.
X-383	N/A	40 CFR Part 60, Subpart K	Tank was constructed after May 19, 1978.
X-383	N/A	40 CFR Part 60, Subpart Ka	Tank was constructed after 7/23/84.
X-383	N/A	40 CFR Part 60, Subpart Kb	Storage capacity is greater than or equal to 151 cubic meters (39,900 gallons) and the vessel stores a volatile organic liquid with maximum true vapor pressure < 3.5 kPa (0.5 psia).
X-383	N/A	40 CFR Part 63, Subpart G	Storage vessel not associated with a chemical manufacturing process unit meeting the criteria of 63.100(b)(1).

New Source Review Authorization References By Emissions Unit

The following is a list of New Source Review (NSR) authorizations for emission units. The NSR Authorizations are applicable requirements under 30 TAC Chapter 122 and enforceable under this operating permit.

Unit/Group/Process ID No.	Emission Unit Name/Description	New Source Review Authorization**
WTP6ICE1	Water Treatment Plant 6, Engine 1	106.512/09/04/2000
WTP6ICE2	Water Treatment Plant 6, Engine 2	106.512/09/04/2000
WTP6ICE3	Water Treatment Plant 6, Engine 3	106.512/09/04/2000
WTP6ICE4	Water Treatment Plant 6, Engine 4	106.512/06/13/2001 [147027]
WTP6ICE5	Water Treatment Plant 6, Engine 5	106.512/06/13/2001 [147027]
X-383	Coke Slurry Tank X-383	106.472/09/04/2000

**This column may include Permit by Rule (PBR) numbers and version dates, PBR Registration numbers in brackets, Standard Permit Registration numbers, Minor NSR permit numbers, and Major NSR permit numbers.

Alternative Requirement

Alternative Requirement..... 2867

Steam Strippers PROTRT071G and PROTRT081G are treatment processes managing HON Group 1 wastewater streams from the ExxonMobil Baytown Refinery, Chemical Plant, and Olefins Plant. Steam strippers PROTRT071G and PROTRT081G will also manage MON Group 1 wastewater streams from the ExxonMobil Baytown Chemical Plant. Steam strippers PROTRT071G and PROTRT081G are meeting the alternative parameter monitoring requirements in 40 CFR § 63.151(f) to comply with the percent mass removal control method specified in 40 CFR § 63.138(e)(1). ExxonMobil submitted the information required by 40 CFR § 63.151(f)(1)-(3) as part of the Title V Operating Permit application as follows:

(1) A description of the parameter(s) to be monitored to ensure the control technology or pollution prevention measure is operated in conformance with its design and achieves the specified emission limit, percent reduction, or nominal efficiency, and an explanation of the criteria used to select the parameter(s).

ExxonMobil monitors the steam strippers PROTRT071G and PROTRT081G Tower Overhead temperature and Steam to Feed ratio to ensure that the mass removal efficiency is greater than or equal to 99%. A design evaluation was submitted with the permit application that shows that the steam stripper removal efficiency is greater than 99% which meets the requirements of 40 CFR § 63.138(e)(1).

(2) A description of the methods and procedures that will be used to demonstrate that the parameter indicates proper operation of the control device, the schedule for this demonstration, and a statement that the owner or operator will establish a range for the monitored parameter as part of the Notification of Compliance Status report required in § 63.152(b) of this subpart, unless this information has already been included in the operation permit application.

Operating ranges for the Steam Strippers PROTRT071G and PROTRT081G Tower Overhead temperature and Steam to Feed ratio were submitted in the ExxonMobil Baytown Refinery HON Notice of Compliance Status (NOCS) on April 12, 2000. NOCS operating ranges may be revised in the periodic report as necessary as stated in 40 CFR § 63.151(j).

(3) The frequency and content of monitoring, recordkeeping, and reporting if monitoring and recording is not continuous, or if reports of daily average values when the monitored parameter value is outside the range established in the operating permit or Notification of Compliance Status will not be included in Periodic Reports required under § 63.152(c) of this subpart. The rationale for the proposed monitoring, recording, and reporting system shall be included.

Steam strippers PROTRT071G and PROTRT081G Tower Overhead temperature and Steam to Feed ratio are monitored continuously and the daily average values outside the Operating range (as stated in the NOCS) will be reported in the Periodic Report.

Re: Exemption Approval in Lieu of Alternative Monitoring Plan (AMP)
New Source Performance Standards (NSPS) 40 CFR Part 60, Subpart J
Baytown, Texas Refinery
Hot Oil Drum D-703 to Flare Stack 19 (FS-19) and Flare Stack 22 (FS-22)
Consent Decree Civil No. 05-C-5809

Dear Ms. Otto:

This letter is in response to your AMP request dated June 12, 2006, and supplemental data submitted on November 4, 2011, concerning a fuel gas stream that you have identified as low in sulfur content under NSPS Part 60 Subpart J. The Environmental Protection Agency (EPA) evaluated your request in light of changes made to Subpart J on June 24, 2008 (73 Federal Register 35866), and found that your AMP request has been superseded by an exemption provided in the rule which applies to this vent stream.

Specifically, ExxonMobil proposes to combust the off-gas vent stream from Hot Oil Drum D-703 at FS-19 and FS-22. Your original AMP proposal provided information pertaining to the D-703 off-gas vent stream which is consistent with the information now required in 40 CFR §60.105(b)(1). Upon review of the information provided, EPA finds that the D-703 off-gas vent stream to FS-19 and FS-22 is inherently low in sulfur according to 40 CFR §60.105(a)(4)(iv)(D), when controlled as described in the attached Enclosure. Therefore, the fuel gas combustion devices do not need to meet the continuous monitoring requirements of either 40 CFR §60.105(a)(3) or §60.105(a)(4). The effective date of this exemption is June 24, 2008 (the effective date of the rule change).

If refinery operations change such that the sulfur content of the off-gas vent stream from D-703 to FS-19 and FS-22 changes from representations made for this conditional exemption determination, then ExxonMobil must document the change(s) and follow the appropriate steps outlined in 40 CFR §60.105(b)(3)(i)-(iii). This exemption approval should also be referenced and attached to the facility's new source review (NSR) and Title V permits for federal

Re: Exemption Approval in Lieu of Alternative Monitoring Plan (AMP)
New Source Performance Standards (NSPS) 40 CFR Part 60, Subpart J
Baytown, Texas Refinery
Hydroformer 3 (HF-3) Off-Gas from D-130 to Flare Stack 4 (FS-4)
Consent Decree Civil No. 05-C-5809

Dear Ms. Otto:

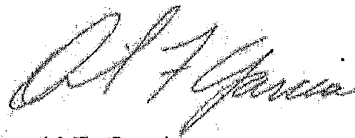

This letter is in response to your AMP request dated June 12, 2006, and supplemental data submitted on November 15, 2011, concerning a fuel gas stream that you have identified as low in sulfur content under NSPS Part 60 Subpart J. The Environmental Protection Agency (EPA) evaluated your request in light of changes made to Subpart J on June 24, 2008 (73 Federal Register 35866), and found that your AMP request has been superseded by an exemption provided in the rule which applies to this vent stream.

Specifically, ExxonMobil proposes to combust the HF-3 off-gas vent stream from knock-out drum D-130 at FS-4. Your original AMP proposal provided information pertaining to the D-130 off-gas vent stream which appears to meet the criteria for exemption under 40 CFR §60.105(a)(4)(iv). Upon review of the information provided, EPA finds that the D-130 off-gas vent stream to FS-4 is inherently low in sulfur according to 40 CFR §60.105(a)(4)(iv)(C), when controlled as described in the attached Enclosure. Therefore, the fuel gas combustion device does not need to meet the continuous monitoring requirements of either 40 CFR §60.105(a)(3) or §60.105(a)(4). The effective date of this exemption is June 24, 2008 (the effective date of the rule change).

EPA understands from your November 15, 2011, correspondence that ExxonMobil has cancelled this particular portion of the project to alternately route this vent stream to Furnace F-1. Accordingly, the portion of the separate AMP request of June 8, 2006, that pertains to Furnace F-1 is hereby closed with no further action.

If refinery operations change such that the sulfur content of the off-gas vent stream from HF-3 to D-130 and then to FS-4 changes from representations made for this conditional exemption determination, then ExxonMobil must document the change(s) and follow the appropriate steps outlined in 40 CFR §60.105(a)(4)(iv). This exemption approval should also be referenced and attached to the facility's new source review (NSR) and Title V permits for federal enforceability. If you have any questions or concerns about this determination, please feel free to contact Diana L. Lundelius of my staff at (214) 665-7468, or by email Lundelius.Diana@epa.gov.

Sincerely,

David F. Garcia
Associate Director

Re: Exemption Approval in Lieu of Alternative Monitoring Plan (AMP)
New Source Performance Standards (NSPS) 40 CFR Part 60, Subpart J
Baytown, Texas Refinery
Caustic Oxidation Unit (COU) Knock-out Drum D-42 to Incinerator I-001
Consent Decree Civil No. 05-C-5809

Dear Ms. Otto:

This letter is in response to your AMP request dated June 12, 2006, and supplemental data submitted on November 4, 2011, concerning a fuel gas stream that you have identified as low in sulfur content under NSPS Part 60 Subpart J. The Environmental Protection Agency (EPA) evaluated your request in light of changes made to Subpart J on June 24, 2008 (73 Federal Register 35866), and found that your AMP request has been superseded by an exemption provided in the rule which applies to this vent stream.

Specifically, ExxonMobil proposes to combust the off-gas vent stream from the COU Knock-out Drum D-42 at the COU Incinerator I-001. Your original AMP proposal provided information pertaining to the COU vent stream which is consistent with the information now required in 40 CFR §60.105(b)(1). Upon review of the information provided, EPA finds that the D-42 off-gas vent stream to COU Incinerator I-001 is inherently low in sulfur according to 40 CFR §60.105(a)(4)(iv)(D), when controlled as described in the attached Enclosure. Therefore, the fuel gas combustion devices do not need to meet the continuous monitoring requirements of either 40 CFR §60.105(a)(3) or §60.105(a)(4). The effective date of this exemption is June 24, 2008 (the effective date of the rule change).

If refinery operations change such that the sulfur content of the off-gas vent stream from D-42 to I-001 changes from representations made for this exemption determination, then ExxonMobil must document the change(s) and follow the appropriate steps outlined in 40 CFR §60.105(b)(3)(i)-(iii). This conditional exemption approval should also be referenced and attached to the facility's new source review (NSR) and Title V permits for federal enforceability.

New Source Performance Standards (NSPS) 40 CFR Part 60, Subpart J
Baytown, Texas Refinery
Loading Racks 3 & 22 Off-Gas to Thermal Oxidizer TC-301
Consent Decree Civil No. 05-C-5809

Dear Ms. Otto:

This letter is in response to your AMP request dated June 12, 2006, and supplemental data submitted on December 9, 2011, concerning a fuel gas stream that you have identified as low in sulfur content under NSPS Part 60 Subpart J. The Environmental Protection Agency (EPA) evaluated your request in light of changes made to Subpart J on June 24, 2008 (73 Federal Register 35866), and found that your AMP request has been superseded by an exemption provided in the rule which applies to this vent stream.

Specifically, ExxonMobil proposes to combust the vapors from Loading Racks 3 and 22 at Thermal Oxidizer TC-301. Your original AMP proposal provided information pertaining to the off-gas vent stream from the loading rack vapor recovery system knock out drum (V-201) which is consistent with the information now required in 40 CFR §60.105(b)(1). Upon review of the information provided, EPA finds that the off-gas vent stream from Loading Racks 3 and 22 to TC-301 is inherently low in sulfur according to 40 CFR §60.105(a)(4)(iv)(D), when controlled as described in the attached Enclosure. Therefore, the fuel gas combustion device does not need to meet the continuous monitoring requirements of either 40 CFR §60.105(a)(3) or §60.105(a)(4). The effective date of this exemption is June 24, 2008 (the effective date of the rule change).

If refinery operations change such that the sulfur content of the off-gas vent stream from the loading racks changes from representations made for this conditional exemption determination, then ExxonMobil must document the change(s) and follow the appropriate steps outlined in 40 CFR §60.105(b)(3)(i)-(iii). This exemption applies to the loading of current and future products which meet a sulfur specification limit of 5 parts per million by weight (ppmv),

provided that documentation of any product additions or changes is recorded in accordance with §60.105(b)(3)(i). This exemption approval should also be referenced and attached to the facility's new source review (NSR) and Title V permits for federal enforceability. If you have any questions or concerns about this determination, please feel free to contact Diana L. Lundelius of my staff at (214) 665-7468, or by email Lundelius.Diana@epa.gov.

Re: Exemption Approval in Lieu of Alternative Monitoring Plan (AMP); New Source Performance Standards (NSPS), 40 Code of Federal Regulations (C.F.R.) Part 60, Subpart J; Baytown, Texas Refinery; Water Wash Tower T-317 to Flare Stack 25 (FS-25); Consent Decree Civil No. 05-C-5809

Dear Ms. Otto:

This letter is in response to your AMP request dated June 12, 2006, concerning a fuel gas stream that you have identified as low in sulfur content under NSPS Subpart J. The United States Environmental Protection Agency (EPA) has evaluated your request in light of changes made to NSPS Subpart J on June 24, 2008 (73 Federal Register 35866), and finds that your AMP request is superseded by an exemption provided in the rule which applies to this vent stream as explained below and further delineated in our Enclosure to this letter.

Specifically, the off-gas vent stream from water wash tower T-317 is combusted in flare stack FS-25 at the Baytown Complex. The water wash tower is part of the a unit which employs thermal cracking to break down still bottoms from other processes into viable products. The lightest compounds are then cleaned up to further remove contaminants, including hydrogen sulfide. ExxonMobil furnished operating data for the T-309 absorber, the T-316 caustic wash tower, and the vent stream from the water wash tower T-317 that is consistent with the information now required in 40 C.F.R. § 60.105(b)(1) for an exemption application (i.e., see AMP request dated June 12, 2006; AMP revision dated August 24, 2007; AMP revision submitted as part of a December 2007 periodic monitoring report; and AMP supplemented data provided by letter dated April 5, 2012).

Upon review of the information provided, EPA finds that the D-341 off-gas vent stream to FS-25 is inherently low in sulfur according to 40 C.F.R. § 60.105(a)(4)(iv)(D), as long as certain parametric monitoring provisions are maintained as specified in the Enclosure to this letter. Therefore, FS-25 does not need to meet the continuous monitoring requirements of either 40 C.F.R. § 60.105(a)(3) or § 60.105(a)(4) for this particular fuel gas stream as long as the conditions outlined in our Enclosure are met. The effective date of this exemption is June 24, 2008 (the effective date of the rule change).

If refinery operations change such that the sulfur content of the off-gas vent stream from T-317 to FS-25 changes from representations made for this conditional exemption determination, then ExxonMobil must document the change(s) and follow the appropriate steps outlined in 40 C.F.R. § 60.105(b)(3)(i)-(iii). This exemption approval should also be referenced and attached to the facility's new source review (NSR) and Title V permits for federal enforceability. If you have any questions or concerns about this determination, please feel free to contact Diana L. Lundelius of my staff at (214) 665-7468, or by email at Lundelius.Diana@epa.gov.

Sincerely,

A handwritten signature in black ink, appearing to read "David F. Garcia", with a long horizontal flourish extending to the right.

ENCLOSURE

**New Source Performance Standards (NSPS), 40 C.F.R. Part 60, Subpart J
Baytown, Texas Refinery – Off-Gas Vent Stream
Water Wash Tower T-317 to Flare Stack 25 (FS-25)**

ExxonMobil combusts the off-gas vent stream from water wash tower T-317 at FS-25. The facility conducted monitoring of the hydrogen sulfide (H_2S) concentration with length of stain detector tubes at one location downstream of T-317, and prior to mixing with other vent streams or commercial grade natural gas in the flare header. The original AMP proposal dated June 12, 2006, the August 2007 revision, and the April 2012 correspondence submittal have been reviewed together as an application for exemption from continuous monitoring under NSPS Subpart J, 40 CFR § 60.105(b)(1).

Flare Stack 25 (FS-25) is designed to combust gases that are vented from many sources, one of which is a water wash tower, T-317. The water wash tower is part of the a unit which employs thermal cracking to break down still bottoms from other processes into viable products. The lightest compounds are then cleaned up to further remove contaminants, including hydrogen sulfide (H_2S). One of these products is High BTU Gas (HBG). An absorber (T-309) removes H_2S from the HBG. The low- H_2S HBG stream is then introduced into a caustic wash tower (T-316), where residual H_2S is removed (See Figure 1). From the caustic wash tower, the HBG enters water wash tower T-317. The water wash tower cleanses the HBG stream coming from T-316 with boiler feed water to remove any entrained caustic. The amount of water in T-317 is level-controlled to purge the water out of the tower. The purge water and vent stream from T-317 are routed to Flare 25 seal drum D-339 to prevent backflow from FS-25 into flare knock-out drum D-336. The liquid purge water from T-317 may also be routed to another operating unit (See Figure 2).

ExxonMobil furnished operating data for the T-309 absorber, the T-316 caustic wash tower, and the vent stream from the water wash tower T-317 in support of the AMP request. EPA has determined that ExxonMobil must monitor and control the following process parameters, in accordance with the revision requested in the December 2007 periodic monitoring report and the operating ranges confirmed in the company's correspondence dated April 5, 2012:

- The maximum temperature differential for the caustic wash tower T-316
- The caustic concentration range and feed rate into T-316
- The HBG feed rate into T-316
- The boiler feed water introduction rate into T-317
- H_2S concentration range entering T-316

- H₂S concentration in treated HBG gas entering T-317 (normal operation)
- H₂S concentration in treated HBG gas exiting T-317 (normal operation)
- The inlet temperature of feed material into T-309 (normal operation)
- The temperature inside T-316 after the majority of H₂S is removed (normal operation)
- Displaced water volume from T-317 to D-339

ExxonMobil submitted Figures 1 and 2 with the June 2006 and revised August 2007 AMP requests. ExxonMobil also furnished process and instrumentation drawings (P&IDs) in its April 2012 correspondence which showed that there are no other process vent streams that commingle with the vent stream from T-317 to flare seal drum D-339 during normal operation, or prior to entering the FS-25 flare header. ExxonMobil noted that there are two potential bypass points where fuel gas could be vented directly to atmosphere. One is a vent to atmosphere which is blinded off by a flange and monitored for leaks. The other is an interconnecting vent line, the valve of which is car-sealed closed. One possible upset or malfunction condition was described that could potentially affect the characteristics of the vent gas from T-317. ExxonMobil provided a brief description of the condition, along with the alarm systems used to monitor the process, and corrective measures that are taken to return the process to normal operation.

In the revised August 2007 AMP request, ExxonMobil provided two weeks (14 samples) of monitoring data for the off-gas vent stream going from T-317 to FS-25. Samples were obtained from the top of T-317 prior to mixing with other vent gas streams, and showed non-detectable concentrations of H₂S. ExxonMobil conducted H₂S monitoring using length of stain gas detector tubes according to the steps outlined in the August 24, 2007, revised AMP request, and the method outlined in Gas Processor Association Standard 2377-86. However, the length of stain H₂S detector tubes used had a range of 1-20/10-200 parts per million (ppm), N=10/1. The gas detector tubes have relative standard deviations of 5-15%, depending on the measured range for each tube type. The gas detector tubes are substantially similar to length of stain detector tubes specified in Gas Processor Association Standard 2377-86, except for the detection range. The two weeks of sample results showed non-detectable concentrations of H₂S at the T-317 monitoring point.

Additional quarterly monitoring results from August 28, 2007, to June 27, 2011, showed non-detectable concentrations of H₂S at the T-317 monitoring point. The monitoring data were submitted as representative of typical operating conditions affecting H₂S content in the off-gas vent stream from T-317 to the FS-25. Therefore, the length of stain detector tube test results, the monitored process parameters, and other operational data furnished serve as the bases for demonstration that the vent stream meets the exemption of 40 C.F.R. § 60.105(a)(4)(iv)(D), and that the sulfur content is less than the acceptance criteria of 81 ppm H₂S.

Re: Exemption Approval in Lieu of Alternative Monitoring Plan (AMP); New Source Performance Standards (NSPS), 40 Code of Federal Regulations (C.F.R.) Part 60, Subpart J; Baytown, Texas Refinery; Spent Caustic Drum D-341 to Flare Stack 25 (FS-25); Consent Decree Civil No. 05-C-5809

Dear Ms. Otto:

This letter is in response to your AMP request dated June 12, 2006, concerning a fuel gas stream that you have identified as low in sulfur content under NSPS Subpart J. The United States Environmental Protection Agency (EPA) has evaluated your request in light of changes made to NSPS Subpart J on June 24, 2008 (73 Federal Register 35866), and finds that your AMP request is superseded by an exemption provided in the rule which applies to this vent stream as explained below and further delineated in our Enclosure to this letter.

Specifically, the off-gas vent stream from spent caustic drum D-341 is combusted in flare stack FS-25 at the Baytown Complex. The spent caustic drum is part of the a unit which employs thermal cracking to break down still bottoms from other processes into viable products. The lightest compounds are then cleaned up to further remove contaminants, including hydrogen sulfide. ExxonMobil has furnished data and operating information for the T-309 absorber, the T-316 caustic wash tower, and the vent stream from the spent caustic drum D-341 that is consistent with the information now required in 40 C.F.R. § 60.105(b)(1) for an exemption application (see AMP request dated June 12, 2006; AMP revision dated August 24, 2007; AMP revision submitted as part of a December 2007 periodic monitoring report; and, AMP supplemented data provided by letter dated April 5, 2012).

Upon review of the information provided, EPA finds that the D-341 off-gas vent stream to FS-25 is inherently low in sulfur according to 40 C.F.R. § 60.105(a)(4)(iv)(D), as long as certain parametric monitoring provisions are maintained as specified in the Enclosure to this letter. Therefore, FS-25 does not need to meet the continuous monitoring requirements of either 40 C.F.R. § 60.105(a)(3) or § 60.105(a)(4) for this particular fuel gas stream as long as the

conditions outlined in our Enclosure are met. The effective date of this exemption is June 24, 2008 (the effective date of the rule change).

If refinery operations change such that the sulfur content of the off-gas vent stream from D-341 to FS-25 changes from representations made for this conditional exemption determination, then ExxonMobil must document the change(s) and follow the appropriate steps outlined in 40 C.F.R. § 60.105(b)(3)(i)-(iii). This exemption approval should also be referenced and attached to the facility's new source review (NSR) and Title V permits for federal enforceability. If you have any questions or concerns about this determination, please feel free to contact Diana L. Lundelius of my staff at (214) 665-7468, or by email at Lundelius.Diana@epa.gov.

Sincerely,

For David F. Garcia

ENCLOSURE

**New Source Performance Standards (NSPS), 40 C.F.R. Part 60, Subpart J
Baytown, Texas Refinery – Off-Gas Vent Stream
Spent Caustic Drum D-341 to Flare Stack 25 (FS-25)**

ExxonMobil combusts the off-gas vent stream from spent caustic drum D-341 at FS-25. The facility conducted monitoring of the hydrogen sulfide (H_2S) concentration with length of stain detector tubes at one location downstream of D-341, and prior to mixing with other vent streams or commercial grade natural gas in the flare header. The original AMP proposal dated June 12, 2006, the August 2007 revision, and the April 2012 correspondence submittal have been reviewed together as an application for exemption from continuous monitoring under NSPS Subpart J, 40 CFR § 60.105(b)(1).

Flare Stack 25 (FS-25) is designed to combust gases that are vented from many sources, one of which is a spent caustic drum, D-341. The spent caustic drum is part of the a unit which employs thermal cracking to break down still bottoms from other processes into viable products. The lightest compounds are then cleaned up to further remove contaminants, including hydrogen sulfide (H_2S). One of these products is High BTU Gas (HBG). An absorber (T-309) removes H_2S from the HBG. The low- H_2S HBG stream is then introduced into a caustic wash tower (T-316), where residual H_2S is removed (See Figure 1). Inside the wash tower, re-circulated caustic solution is sprayed from the top. Fresh caustic make-up ensures there is sufficient reactive material for removing the residual H_2S and sulfur compounds from the HBG. A level controller removes excess (spent) caustic from the bottom of the tower. This excess caustic is sent to the spent caustic drum D-341. Vapor from D-341 vents to the Flare Stack 25 emergency header via the FS-25 knock-out drum D-336 (see Figure 2). Spent liquid caustic is sent for further treatment. The caustic wash tower has many sections and operates with a temperature differential. The bulk of residual H_2S is removed in the first portion of the tower, so the remaining sections ensure that the proper temperature differential and caustic concentration are maintained.

ExxonMobil furnished operating data for the T-309 absorber, the T-316 caustic wash tower, and the vent stream from the spent caustic drum D-341, in support of the AMP request. EPA has determined that ExxonMobil must monitor and control the following process parameters, in accordance with the revision requested in the December 2007 periodic monitoring report and the operating ranges confirmed in the company's correspondence dated April 5, 2012:

- The maximum temperature differential for the caustic wash tower T-316
- The total feed rates into T-309

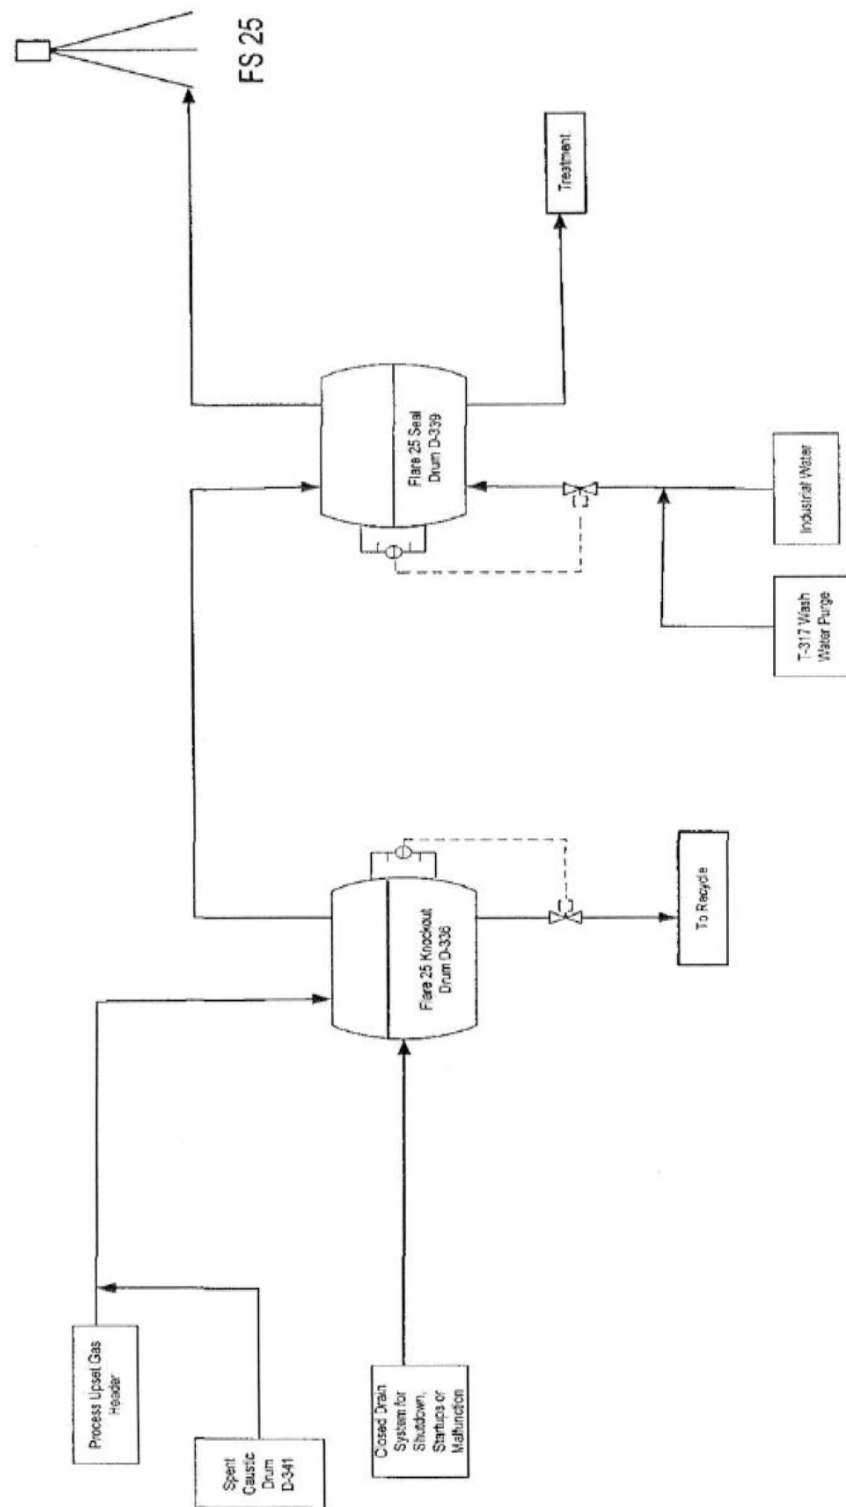

- The H₂S concentration in pre-treated absorbed gas
- The H₂S concentration in treated HBG gas (normal operation)
- The inlet temperature of feed material into T-309 (normal operation)
- The temperature inside T-316 after the majority of H₂S is removed (normal operation)
- The displaced vapor volume from D-341 (estimated based on level changes)

ExxonMobil submitted Figures 1 and 2 with the June 2006 and revised August 2007 AMP requests. ExxonMobil also furnished process and instrumentation drawings (P&IDs) in its April 2012 correspondence which showed that there are no other process vent streams that commingle with the vent stream from D-341 to knock-out drum D-336 during normal operation, or prior to entering the FS-25 flare header seal drum D-339. ExxonMobil did note that there are two potential bypass points where fuel gas could be vented directly to atmosphere. One is a vent to atmosphere which is blinded off by a flange and monitored for leaks. The other is an interconnecting vent line, the valve of which is car-sealed closed. Possible upset or malfunction conditions were described that could potentially affect the characteristics of the vent gas from D-341. ExxonMobil provided a brief description of each condition, along with the corrective measures that are taken to mitigate each condition.

In the revised August 2007 AMP request, ExxonMobil provided two weeks (14 samples) of monitoring data for the off-gas vent stream going from D-341 to FS-25. Samples were obtained from the top of D-341 prior to mixing with other vent gas streams, and showed non-detectable concentrations of H₂S. ExxonMobil conducted H₂S monitoring using length of stain gas detector tubes according to the steps outlined in the August 24, 2007, revised AMP request, and the method outlined in Gas Processor Association Standard 2377-86. However, the length of stain H₂S detector tubes used had a range of 1-20/10-200 parts per million (ppm), N=10/1. The gas detector tubes have relative standard deviations of 5-15%, depending on the measured range for each tube type. The gas detector tubes are substantially similar to length of stain detector tubes specified in Gas Processor Association Standard 2377-86, except for the detection range. The two weeks of sample results showed non-detectable concentrations of H₂S at the D-341 monitoring point.

Additional quarterly monitoring results from August 28, 2007, to June 27, 2011, showed non-detectable concentrations of H₂S at the D-341 monitoring point. The monitoring data were submitted as representative of typical operating conditions affecting H₂S content in the off-gas vent stream from D-341 to the FS-25. Therefore, the length of stain detector tube test results, the monitored process parameters, and other operational data furnished, serve as the bases for demonstration that the vent stream meets the exemption of 40 C.F.R. § 60.105(a)(4)(iv)(D), and that the sulfur content is less than the acceptance criteria of 81 ppm H₂S.

Re: Exemption Approval in Lieu of Alternative Monitoring Plan (AMP); New Source Performance Standards (NSPS), 40 Code of Federal Regulations (C.F.R.) Part 60, Subpart J; Baytown, Texas Refinery; Flexsorb Reclaimer E-348 to Flare Stack 26 (FS-26); Consent Decree Civil No. 05-C-5809

Dear Ms. Otto:

This letter is in response to your AMP request dated June 12, 2006, concerning a fuel gas stream that you have identified as low in sulfur content under NSPS Subpart J. The United States Environmental Protection Agency (EPA) has evaluated your request in light of changes made to NSPS Subpart J on June 24, 2008 (73 Federal Register 35866), and finds that your AMP request is superseded by an exemption provided in the rule which applies to this vent stream as explained below and further delineated in our Enclosure to this letter.

Specifically, the off-gas vent stream from the Flexsorb reclaimer, E-348, is combusted in flare stack FS-26 at the Baytown Complex. The Flexsorb reclaimer is part of the a unit which employs thermal cracking to break down still bottoms from other processes into viable products. The lightest compounds are then cleaned up to further remove contaminants, including hydrogen sulfide. ExxonMobil has furnished data and operating information for the Flexsorb reclaimer that is consistent with the information now required in 40 C.F.R. § 60.105(b)(1) for an exemption application (i.e., see AMP request dated June 12, 2006; AMP revision dated August 24, 2007; AMP revision submitted as part of a December 2007 periodic monitoring report; and AMP supplemented data provided by letter dated April 5, 2012).

Upon review of the information provided, EPA finds that the E-348 off-gas vent stream to FS-26 is inherently low in sulfur according to 40 C.F.R. § 60.105(a)(4)(iv)(D), as long as certain parametric monitoring provisions are maintained as specified in the Enclosure to this letter. Therefore, FS-26 does not need to meet the continuous monitoring requirements of either 40 C.F.R. § 60.105(a)(3) or § 60.105(a)(4) for this particular fuel gas stream as long as the conditions outlined in our Enclosure are met. The effective date of this exemption is June 24, 2008 (the effective date of the rule change).

If refinery operations change such that the sulfur content of the off-gas vent stream from E-348 to FS-26 changes from representations made for this conditional exemption determination, then ExxonMobil must document the change(s) and follow the appropriate steps outlined in 40 C.F.R. § 60.105(b)(3)(i)-(iii). This exemption approval should also be referenced and attached to the facility's new source review (NSR) and Title V permits for federal enforceability.

ExxonMobil also indicated in its April 5, 2012, correspondence that it is withdrawing the June 2006 and revised August 2007 AMP requests for the MEA Reclaimer E-343 to FS-26. In accordance with ExxonMobil's request, no further action will be taken on that AMP submittal. If you have any questions or concerns about this determination, please feel free to contact Diana L. Lundelius of my staff at (214) 665-7468, or by email at Lundelius.Diana@epa.gov.

Sincerely,

David F. Garcia

ENCLOSURE

**New Source Performance Standards (NSPS), 40 C.F.R. Part 60, Subpart J
Baytown, Texas Refinery – Off-Gas Vent Stream
Flexsorb Reclaimer E-348 to Flare stack 26 (FS-26)**

ExxonMobil combusts the off-gas vent stream from Flexsorb reclaimer E-348 at FS-26. The facility conducted monitoring of the hydrogen sulfide (H_2S) concentration with length of stain detector tubes at one location downstream of E-348, and prior to mixing with other vent streams or commercial grade natural gas in the flare header. The original AMP proposal dated June 12, 2006, the August 2007 revision, and the April 2012 correspondence submittal have been reviewed together as an application for exemption from continuous monitoring under NSPS Subpart J, § 60.105(b)(1).

Flare stack 26 (FS-26) is designed to combust gases that are vented from many sources, one of which is the Flexsorb reclaimer, E-348. The Flexsorb reclaimer is part of the a unit which employs thermal cracking to break down still bottoms from other processes into viable products. The lightest compounds are then cleaned up to further remove contaminants, including hydrogen sulfide (H_2S). One of these products is High BTU Gas (HBG). The unpurified HBG enters the bottom of an absorber tower, and reacts with Flexsorb to remove H_2S from the HBG. The Flexsorb is added in the top of the tower, and contacts the HBG to absorb the H_2S as it moves to the bottom of the tower. The HBG with low residual H_2S exits the top of the absorber tower.

The Flexsorb material must be regenerated periodically before it can be reused. The H_2S -laden Flexsorb is removed from the bottom of the absorber tower and sent to the E-348 reclaimer vessel, where it is re-boiled with heat and caustic to remove H_2S . A salt compound with residual H_2S remains in E-348 after the Flexsorb is regenerated and sent back to the absorber tower. The salt compound is cooled, removed from E-348 via a sump, and then sent on for further processing. Vent gas from E-348 is routed to the FS-26 header.

EPA has determined that ExxonMobil must monitor and control the following process parameters associated with the Flexsorb reclaimer E-348 and the resulting vent gas stream, in accordance with the operating parameter ranges confirmed in the company's correspondence dated April 5, 2012:

- The caustic feed rate into E-348
- The Flexsorb feed rate into E-348
- pH operating range above 9.0
- Temperature range which ensures proper regeneration of the Flexsorb in E-348

- Steam introduction rate into E-348
- Displaced vapor volume from E-348 (estimated based on reclaimer pressure and volume)

ExxonMobil furnished process and instrumentation drawings (P&IDs) in its April 2012 correspondence which showed that there are no other process vent streams that commingle with the vent stream from E-348 prior to entering the FS-26 flare header. ExxonMobil did note that there was one potential bypass point where fuel gas could be vented directly to atmosphere. This is an interconnecting vent line to Flare Stack 25, the valve of which is car-sealed closed. Possible upset or malfunction conditions were described that could potentially affect the characteristics of the vent gas from E-348. ExxonMobil provided a brief description of each condition, along with the corrective measures that are taken to mitigate each condition.

In the revised August 2007 AMP request, ExxonMobil provided two weeks (14 samples) of monitoring data for the off-gas vent stream going from E-348 to FS-26. Samples were obtained from the top of E-348 prior to mixing with other vent gas streams, and showed non-detectable concentrations of H₂S. ExxonMobil conducted H₂S monitoring using length of stain gas detector tubes according to the steps outlined in the August 24, 2007, revised AMP request, and the method outlined in Gas Processor Association Standard 2377-86. However, the length of stain H₂S detector tubes used had a range of 1-20/10-200 parts per million (ppm), N=10/1. The gas detector tubes have relative standard deviations of 5-15%, depending on the measured range for each tube type. The gas detector tubes are substantially similar to length of stain detector tubes specified in Gas Processor Association Standard 2377-86, except for the detection range. The two weeks of sample results showed concentrations of H₂S at the E-348 monitoring point which were less than 81 ppm.

Additional quarterly monitoring results from June 22, 2007, to June 21, 2011, showed non-detectable concentrations of H₂S at the E-348 monitoring point. The monitoring data were submitted as representative of typical operating conditions affecting H₂S content in the off-gas vent stream from E-348 to the FS-26. Therefore, the length of stain detector tube test results, the monitored process parameters, and other representations made in the company's revised AMP request, along with the correspondence submitted in April 2012, serve as the bases for demonstration that the vent stream meets the exemption of 40 C.F.R. § 60.105(a)(4)(iv)(D), and that the sulfur content is less than the acceptance criteria of 81 ppm H₂S.

Re: Alternative Monitoring Plan (AMP) – Fuel Gases Combusted in Marine Vapor Recovery-Vapor Destruction Unit (MVR-VDR) 440 and MVR-VDR 470 under New Source Performance Standards (NSPS) for Petroleum Refineries (Subpart J); Baytown, Texas Refinery; Consent Decree Civil No. 05-C-5809.

Dear Ms. Otto:

This letter is in response to your AMP request dated June 12, 2006, concerning fuel gas streams that you have identified as low in sulfur content under NSPS Subpart J. In your correspondence dated October 3, 2011, you verified that the loading vapor streams are not excluded from the definition of refinery fuel gas under 40 C.F.R. § 60.101(d) because the marine loading operations at Docks 2 and 4 are not subject to the marine tank vessel loading provisions of 40 C.F.R. §§ 63.562 or 63.651. However, information provided in your AMP dated June 12, 2006, and your supplemental data provided in June 2012, is consistent with the information now required for exemption applications under 40 C.F.R. § 60.105(a)(4)(iv). Therefore, the United States Environmental Protection Agency (EPA) has evaluated your request in light of changes made to NSPS Subpart J on June 24, 2008 (73 Federal Register 35866), and finds that your AMP request is superseded by exemptions provided in the rule which apply to fuel gas streams, as explained within this letter.

Specifically, ExxonMobil combusts vapors from marine loading operations at Docks 2 and 4 in MVR-VDU 440 and MVR-VDU 470 at the Baytown Complex. Commercial-grade natural gas, added as needed to the incoming fuel lines of MVR-VDU 440 and MVR-VDU 470, provides sufficient heat input to operate the units at required temperatures. Products loaded at Docks 2 and 4 must meet product specifications, or, are manufactured under operating limits that ensure sulfur and/or hydrogen sulfide (H₂S) are removed from the individual products, prior to loading. All product specifications include a maximum limit of 30 parts per million by volume (ppmv) sulfur content (or lower), and/or a maximum limit of 15 parts per million (ppm) H₂S content (or lower). Product specifications for each product are verified by specified test methods prior to loading, with the exception of raw steam cracked naphtha (Raw SCN) and heavy naphtha (BOP Cyclodiene), two products that are continuously made and immediately loaded into the tanks. ExxonMobil proposes to monitor and meet process operating temperature limits to ensure low sulfur content of these two product types and proposes to verify low sulfur content for all other products prior to loading in accordance with established product specifications and test methods as described in our Enclosure.

Based upon the information provided to date, separate exemptions apply to the various fuel gas streams identified in ExxonMobil's AMP, characterized as follows:

1. Certified commercial grade natural gas is utilized for the pilot flame in MVR-VDU 440 and MVR-VDU 470 and is therefore a fuel gas that meet the exemption requirements of 40 C.F.R. 60.105(a)(4)(iv)(A).
2. All products with established product specifications that are verified by specified testing methods (see Enclosure) prior to loading at Docks 2 and 4, to ensure sulfur content is limited to 30 ppmv or less, are fuel gases that meet the exemption requirement of 40 C.F.R. § 60.105(a)(4)(iv)(B).
3. Raw SCN and BOP Cyclodiene products that are manufactured under specified conditions, where temperature operating limits are continuously monitored and maintained above 0°F (see our Enclosure), are fuel gases that meet the exemption requirement of 40 C.F.R. § 60.105(a)(4)(iv)(D).

Therefore, MVR-VDU 440 and MVR-VDU 470 do not need to meet the continuous monitoring requirements of either 40 C.F.R. § 60.105(a)(3) or § 60.105(a)(4) for the fuel gas streams identified above. If refinery operations change so that any of the specified streams have an increase in sulfur content or if any of the product specifications are modified so that an exempted stream is no longer considered low in sulfur content as specified in the rule, then ExxonMobil must document the change(s) and determine if the stream remains exempt. If the stream is no longer exempt, continuous monitoring shall begin within 15 days of the change in accordance with 40 C.F.R. § 60.105(a)(4)(iv); however, if changes in process operating conditions or stream composition occur for the Raw SCN and BOP Cyclodiene vapor streams please refer to the procedures outlined in 40 C.F.R. § 60.105(b)(3)(i)-(iii). The effective date of this exemption is June 24, 2008 (the effective date of the rule change).

This exemption approval should also be referenced and attached to the facility's new source review (NSR) and Title V permits for federal enforceability. If you have any questions or concerns about this determination, please feel free to contact Diana L. Lundelius of my staff at (214) 665-7468 or Lundelius.Diana@epa.gov.

Sincerely,

For David F. Garcia

ENCLOSURE

**New Source Performance Standards (NSPS) Subpart J
Baytown, Texas Refinery
Off-Gas Vapors from Marine Loading Docks 2 and 4
Combusted in MVR-VDU 440 and MVR-VDU 470**

ExxonMobil combusts vapors from product loading racks at Docks 2 and 4 in MVR-VDU 440 and MVR-VDU 470. However, loading vapor streams are not excluded from the definition of refinery fuel gas under Title 40 of Code of Federal Regulations (C.F.R.) § 60.101(d) because the marine loading operations at Docks 2 and 4 are not subject to the marine tank vessel loading provisions of 40 C.F.R. §§ 63.562 or 63.651. Therefore, EPA has reviewed ExxonMobil's AMP dated June 12, 2006, and the data contained in ExxonMobil's June 2012 correspondence, as an exemption application in accordance with the provisions of 40 C.F.R. § 60.105(a)(4)(iv).

Vapors that are displaced during the marine loading process are routed to two water seal drums, D-470 and D440, and then to MVR-VDU 440 and MVR-VDU 470 for combustion. The loading vapors come from products which must meet product specifications, or, are manufactured under operating limits that ensure very little sulfur and/or hydrogen sulfide (H_2S) is present in the products. Specifically, the loading of products have a maximum limit of 30 parts per million by volume (ppmv) sulfur content (or lower), and/or a maximum limit of 15 parts per million (ppm) H_2S content (or lower). Product specifications for each product are verified by testing prior to loading, with the exception of raw steam cracked naphtha (Raw SCN) and heavy naphtha (BOP Cyclodiene), since these two products are continuously made and immediately loaded into the tanks.

The RAW SCN and BOP Cyclodiene are manufactured at extremely high temperatures which are well above the boiling point of H_2S . Raw SCN is a combination of stripper and debutanizer bottoms. BOP Cyclodiene is processed by sending the material through a depentanizer to separate the lighter compounds from heavier components. The depentanizer bottoms stream is then routed to a detoluenizer. The BOP Cyclodiene product is the bottom stream of the detoluenizer. As long as either the depentanizer or the detoluenizer maintains process temperatures above 0°F (i.e. well above the boiling point of H_2S , -77°F), the H_2S will be removed with impurities and should not be present in either product.

In correspondence dated June 12, 2012, ExxonMobil confirmed the operating parameter ranges associated with the Raw SCN and BOP Cyclodiene manufacturing processes, the test procedures used for product testing prior to loading, and the loading process at Docks 2 and 4, including the following: the total vapors flow rate from Docks 2 and 4 (normal operation); the total vapors flow rate from D-440 and D-470 to VDU-440 and VDU-470 (normal operation); and, the typical operating temperature ranges for the BOP Cyclodiene and Raw SCN Towers. ExxonMobil analyzes each product by the test method(s) outlined in their June 2006 AMP request¹ prior to loading to ensure that sulfur levels are below those levels identified in the product specification. ExxonMobil indicated that BOP Cyclodiene products are not routed to tanks at Docks 2 and 4 unless

¹ ExxonMobil is also evaluating potential use of one alternate test method, which has a lower detection limit of approximately 0.25 ppm total sulfur.

the process is operating within normal temperature ranges and lab test results have been received that verify sulfur content. For Raw SCN products, the butane species content is restricted by temperature alarms on the upstream towers and analyzer results. Additionally, imported SCN is tested so that H₂S is not introduced from a third party source.

ExxonMobil furnished process and instrumentation drawings (P&IDs) in its June 2012 correspondence which showed that no tie-ins/crossover streams are present that could potentially allow the entry of sour gas into the vapor recovery line. However, commercial-grade natural gas is added, as needed, to the incoming fuel lines of MVR-VDU 440 and MVR-VDU 470 to provide sufficient heat input to operate the units at the required temperatures. ExxonMobil noted that there are several potential bypass points where fuel gas could be vented directly to atmosphere. These are valves which are closed during normal loading operations, and which have operating logic programmed into the controllers to prevent the valves from being open when loading a marine vessel. The other potential bypasses are pressure (safety) relief valves which would only open in the event that the line pressure exceeds specified safety limits. There were no upset or malfunction conditions described that could potentially affect the characteristics of the vapors from Docks 2 and 4 to seal drums D-440 and D-470, or from the seal drums to final combustion in MVR-VDUs 440 and 470.

Also, ExxonMobil provided two weeks (14 samples) of monitoring data for the combined vapor streams from Docks 2 and 4 routed to seal drums D-440 and D-470 and then combusted in MVR-VDU 440 and MVR-VDU 470. The samples were obtained prior to mixing with other vent gas streams, and showed non-detectable concentrations of H₂S. ExxonMobil conducted H₂S monitoring using length of stain gas detector tubes according to the steps outlined in the June 12, 2006, AMP request, and the method outlined in Gas Processor Association Standard 2377-86. However, the length of stain H₂S detector tubes used had a range of 1-20/10-200 parts per million (ppm), N=10/1. The gas detector tubes have relative standard deviations of 5-15%, depending on the measured range for each tube type. The gas detector tubes are substantially similar to length of stain detector tubes specified in Gas Processor Association Standard 2377-86, except for the detection range. The two weeks of sample results showed non-detectable concentrations of H₂S at the MVR-VDU 440 and the MVR-VDU 470 monitoring point.

Additional monitoring results from March 2008 to February 2012 showed non-detectable concentrations of H₂S at the MVR-VDUs 440 and 470 monitoring point. The monitoring data were submitted as representative of typical operating conditions affecting H₂S content in the off-gas vent stream from MVR-VDUs 440 and 470. Therefore, the length of stain detector tube test results, the monitored process parameters, and other representations made in the company's AMP request, serve as the bases for demonstration that the vent streams meet the following fuel gas exemptions:

1. Certified commercial grade natural gas is utilized for the pilot flame in MVR-VDU 440 and MVR-VDU 470 and is therefore a fuel gas that meet the exemption requirements of 40 C.F.R. 60.105(a)(4)(iv)(A).
2. All products with established product specifications that are verified by specified testing methods prior to loading at Docks 2 and 4, to ensure sulfur content is limited to 30 ppmv or less, are fuel gases that meet the exemption requirement of 40 C.F.R. § 60.105(a)(4)(iv)(B).

3. Raw SCN and BOP Cycloidiene products that are manufactured under specified conditions, where temperature operating limits are continuously monitored and maintained above 0°F, are fuel gases that meet the exemption requirement of 40 C.F.R. § 60.105(a)(4)(iv)(D).

Re: Calculation of Sulfur Dioxide (SO₂) Concentrations in the Bypass Stack for Fluid Catalytic Cracking Unit (FCCU) 2 Regenerator in Lieu of Direct Measurement During Control Device Malfunction or Down Time; Alternate Compliance with Monitoring Requirements Specified in ExxonMobil Consent Decree No. 05-C-5809 ("ExxonMobil CD" or "CD") for the ExxonMobil Baytown Refinery, Baytown, Texas

Dear Ms. Otto:

This letter responds to your alternative monitoring plan request dated July 27, 2006, pertaining to your proposal to meet certain monitoring requirements in an alternative manner from that specified in the ExxonMobil CD. As explained in our July 29, 2013, email correspondence, your request is not an alternative monitoring plan under the applicable rule since the rule does not require the particular monitoring provision of concern as outlined in your CD. However, since you have requested our evaluation and approval for the change in monitoring under the CD, specifically in calculating SO₂ emissions in the bypass stack from the FCCU 2 regenerator during emission control device malfunctions or down time, the United States Environmental Protection Agency (EPA) conditionally approves your proposal under Paragraphs 31 and 32 of the CD, as delineated in our Enclosure to this letter.

If refinery operations change such that the calculation method approved is no longer valid, then ExxonMobil must meet the monitoring requirements as originally specified in the CD. This conditional approval, inclusive of our Enclosure, should be referenced and attached to the facility's new source review and Title V permits for federal enforceability, and included in the facility's Operation, Maintenance, and Monitoring Plan required under the CD.

ExxonMobil Baytown Refinery, Baytown, Texas

Steve Thompson
Associate Director
Air/Toxics & Inspection
Coordination Branch

Enclosure

cc: Michael De La Cruz, Texas Commission on Environmental Quality

Enclosure
ExxonMobil Baytown Refinery, Baytown, Texas
Fluid Catalytic Cracking Unit (FCCU) 2 Regenerator
SO₂ Bypass Emissions During Control Device Malfunction or Down Time

ExxonMobil's Baytown Refinery operates the FCCU 2, which has two carbon monoxide furnaces (COF) to combust and control carbon monoxide (CO). The effluent stack gases from the two COFs are combined and then flow through a single jet-ejector type wet gas scrubber (WGS) for particulate matter and SO₂ control. When either of the COFs or the WGS experiences a malfunction or sudden unplanned shutdown, the FCCU regenerator flue gas vents to the atmosphere through a bypass stack upstream of the COFs. This avoids a sudden and unsafe FCCU shutdown. The facility's Consent Decree mandates monitoring the stack emissions via CEMS or an alternate method approved by EPA when bypassing control devices. Since emergency and unscheduled shutdowns or malfunctions of the COFs or the WGS occur infrequently, ExxonMobil developed a method to calculate excess SO₂ emissions the bypass stack in lieu of a continuous emission monitoring system (CEMS).

ExxonMobil conducted sampling and analysis of the FCCU bottoms sulfur slurry, and simultaneously monitored the corresponding FCCU regenerator flue gas SO₂ concentration, over a two month period in May and June 2005, to establish a predictive correlation between the bottoms slurry sulfur concentration and the regenerator SO₂ concentration. The test program consisted of daily bottoms sulfur measurements using an energy dispersive x-ray fluorescence (XRF) spectrometer and ASTM Method D2622. ExxonMobil took SO₂ measurements of the regenerator flue gas in the vent stack using an Intercat electrochemical analyzer. Sulfur tends to be associated with larger hydrocarbon fractions; therefore, the slurry sulfur content is the best process parameter to use for estimating SO₂ concentration values. ExxonMobil will use readings from an oxygen (O₂) process analyzer and air blower flow meter at the FCCU 2 regenerator to convert the calculated SO₂ concentration values to a dry basis, in accordance with requirements of the consent decree. In correspondence submitted September 19, 2013, ExxonMobil verified that the May and June 2005 sampling and monitoring results were still valid and representative of the operation of the FCCU 2 regenerator.

EPA requires that the calculation equation be based on the predictive emission concentration ranges at the upper 95% confidence limit (CL). ExxonMobil used the raw data readings from each of the slurry sampling and SO₂ stack measurements to develop the final equation, which incorporates two times the standard deviation (2σ) for establishment of the 95% CL. The dry regenerator flue gas flow rate will be calculated by material balance, and used with the estimated SO₂ concentration values, to obtain the excess SO₂ emission rate in pounds per hour (lb/hr).

FCCU 2 Regenerator SO₂ Bypass Emissions During Control Device Malfunction or Down Time

ExxonMobil will calculate the SO₂ bypass stack excess emission concentrations during control device malfunction or downtime according to the following equation:

$$\text{SO}_2 \text{ parts per million (ppm)} = 562.71 * (\text{Bottoms Sulfur weight \%}) - 641.1 + 306.5 * \sqrt{\{(12/11) + [(\text{Bottoms Sulfur weight \%} - 2.6067)^2 / 0.2033]\}}$$

ExxonMobil must continue to monitor and record the following process data during bypass events for use in calculating excess SO₂ emissions as specified above, in accordance with the data and information contained in ExxonMobil's July 27, 2006, request, and the September 19, 2013, correspondence:

- Regenerator flue gas O₂%;
- Slurry sulfur weight %;
- Regenerator air blower flow rate; and,
- Sulfur feed rate.

Re: Exemption Approval in Lieu of Alternative Monitoring Plan (AMP) – Commercial Grade Natural Gas Used at Combustion Devices Receiving Hydrogen Sulfide (H₂S) Vent Gas Streams at the ExxonMobil Baytown, Texas Refinery; New Source Performance Standards (NSPS), 40 CFR Part 60, Subpart J; Consent Decree Civil No. 05-C-5809.

Dear Ms. Otto:

This letter is in response to your AMP request dated December 12, 2005, which was subsequently revised March 10, 2006, April 26, 2006, and March 12, 2007, concerning a fuel gas stream that you have identified as inherently low in sulfur content under NSPS Subpart J. The Environmental Protection Agency (EPA) evaluated your request in light of changes made to NSPS Subpart J on June 24, 2008 (73 Federal Register 35866), and found that your AMP request has been superseded by an exemption provided in the rule which applies to this vent stream.

Specifically, ExxonMobil proposes to combust commercial grade natural gas as a supplemental fuel, in combination with refinery fuel gas vent streams which are either monitored under 40 CFR § 60.105(a)(3) or (4), or meet an exemption under § 60.105(a)(4)(iv). Your original AMP proposal, and the 2006 and 2007 revisions, provided information pertaining to the sources of the commercial grade natural gas, and the affected refinery fuel gas vent streams, which is consistent with the information now required in 40 CFR §60.105(b)(1). Upon review of the information provided, EPA finds that the commercial grade natural gas is inherently low in sulfur according to 40 CFR § 60.105(a)(4)(iv)(D), when used and controlled as described in the Enclosure. Therefore, the fuel gas combustion devices do not need to meet the continuous monitoring requirements of either 40 CFR § 60.105(a)(3) or § 60.105(a)(4). The effective date of this exemption is June 24, 2008 (the effective date of the rule change).

If refinery operations change such that the sulfur content of the commercial grade natural gas supplies changes from representations made for this conditional exemption determination, then ExxonMobil must document the change(s) and follow the appropriate steps specifically outlined in 40 CFR § 60.105(b)(3)(i)-(iii). This exemption approval should also be referenced and attached to the facility's new source review (NSR) and Title V permits for federal enforceability. If you have

any questions or concerns about this determination, please feel free to contact Diana L. Lundelius of my staff at (214) 665-7468, or by email at Lundelius.Diana@epa.gov.

Sincerely,

ENCLOSURE

**New Source Performance Standards (NSPS), 40 C.F.R. Part 60, Subpart J
Baytown, Texas Refinery – Supplemental Fuel Gas
Commercial Natural Gas Combined With Refinery Fuel Gas Vent Streams**

ExxonMobil proposes to combust commercial grade natural gas as a supplemental fuel, in combination with refinery fuel gas vent streams which are either monitored under §60.105(a)(3) or (4), or meet an exemption under §60.105(a)(4)(iv).. The facility conducted monitoring of the H₂S concentrations with length of stain detector tubes at each of four incoming natural gas supply pipelines, and prior to mixing with refinery fuel gas vent streams. ExxonMobil conducted the H₂S monitoring according to the steps outlined in the March 12, 2007, revised AMP request, and the method outlined in Gas Processor Association Standard 2377-86. The sample results showed concentrations of H₂S that were less than 0.5 parts per million (ppm) at each of the commercial grade natural gas source locations. ExxonMobil determined that these concentrations are representative of the commercial grade natural gas from each supplier.

The original AMP proposal of December 12, 2005, and the 2006 and 2007 revisions, have been reviewed together as an application for exemption from continuous monitoring under NSPS Subpart J, §60.105(b)(1). ExxonMobil indicated there are two scenarios where the combination of commercial grade natural gas and refinery fuel gas is currently not monitored at the Baytown Refinery:

- Commercial-grade natural gas is added to refinery fuel gas vent streams that are exempt from NSPS J, such as process upset gas, or fuel gas that is released to a control device (e.g. a flare) as a result of relief valve leakage or other emergency malfunctions, and prior to combustion in a refinery combustion device; or,
- Commercial-grade natural gas is added to refinery-produced fuel gas after the fuel gas has been monitored using a continuous emission monitoring system (CEMS) or an approved AMP, and then routed to a burner/tip of a refinery combustion device.

ExxonMobil furnished a list of all devices that combust the mixture of non-monitored commercial natural gas and refinery fuel gas streams. ExxonMobil has also furnished process and instrumentation drawings (P&IDs) with other AMP requests since 2007 for refinery fuel gas vent streams that combine with commercial grade natural gas. The furnished P&IDs showed that there are no other process vent streams that commingle with the refinery fuel gas, other than the commercial grade natural gas. Additionally, ExxonMobil furnished a diagram (Figure 1) of the incoming locations for commercial grade natural gas suppliers at the refinery. The total sulfur contract specification for commercial grade natural gas is a maximum of 0.02 grains per cubic

feet (gr/cf). This corresponds to a maximum sulfur content of 32 ppm, which is well below the NSPS Subpart J limit of 162 ppm (expressed as H₂S).

In its request, ExxonMobil agreed to include the following provisions for ensuring the validity of the alternate monitoring:

- Upon EPA or state permitting authority request, ExxonMobil shall conduct a test audit for the combined commercial natural gas with any refinery fuel gas vent stream that has an approved AMP or NSPS Subpart J exemption. The audit shall consist of daily length of stain detector tube samples collected over a one week period (7 samples). For refinery fuel gas streams infrequently generated and combusted in affected fuel gas combustion devices, an audit shall consist of 3 consecutive sampling events. (e.g. for railcar loading that may occur once per month, an audit would consist of 3 consecutive loading events).
- EPA reserves the right to withdraw approval of an AMP or exemption for any refinery fuel gas vent stream combined with commercial grade natural gas if the combined vent gas stream does not satisfy AMP or exemption criteria or representations.
- ExxonMobil shall keep records of the H₂S length of stain detector tube test data, the representative process parameter data, and fuel gas source data for at least two years.
- If a new refinery fuel gas vent stream is introduced for combining with commercial grade natural gas, ExxonMobil shall apply for an AMP or submit an application for exemption under §60.105(b)(1).

In addition to the alternate monitoring provisions proposed by ExxonMobil, EPA requires ExxonMobil is required to obtain the following data, and conduct monitoring for the following additional parameters, to ensure that new suppliers of commercial grade natural gas meet ExxonMobil contract specifications for total sulfur:

- Obtain a copy of each natural gas supplier's Safety Data Sheet for natural gas, which lists the maximum total sulfur and H₂S concentrations in ppm;
- Conduct length of stain tube testing for H₂S concentration within 30 days after establishing a new commercial grade natural gas supplier or replacing an existing supplier;
- Revise Figure 1 whenever a new or replacement supplier of commercial grade natural gas is added; and,
- Maintain copies of the appropriate P&IDs which show the sampling point for length of stain tube testing of H₂S concentration at the source location when adding or replacing a commercial grade natural gas supplier.

Based on the information provided, the length of stain detector tube test results, the monitored process parameters, and other operational data furnished, serve as the bases for

demonstration that the commercial grade natural gas meets the exemption of 40 C.F.R. §60.105(a)(4)(iv)(D), and that the sulfur content is less than the NSPS Subpart J limit of 162 ppm and the acceptance criteria of 81 ppm H₂S.

RE: Alternative Monitoring Plan (AMP) – New Source Performance Standards (NSPS) for Petroleum Refineries (40 CFR Part 60 Subparts J and Ja) and National Emission Standards for Hazardous Air Pollutants (NESHAP) for Petroleum Refineries (40 CFR Part 63 Subpart UUU) – Parametric Monitoring in Lieu of Continuous Opacity Monitoring System for Fluidized Catalytic Cracking Unit (FCCU) 2 Wet Gas Scrubber (WGS) and FCCU 3 WGS at the ExxonMobil Baytown Corporation Refinery (BTRF) in Texas; Clean Air Act Permit No. 18287/PSD-TX-730M4/PAL7.

Dear Ms. Otto:

This letter is in response to your two requests, each letter dated June 22, 2017, pertaining to modification of prior approved AMPs¹ for the FCCU 2 and the FCCU 3 WGS units under NSPS Subparts J and Ja and NESHAP Subpart UUU (modification requests initially submitted by separate letters dated September 20 and October 3, 2016). Upon review of all available information, the United States Environmental Protection Agency (EPA) approves your updated AMP request for each FCCU WGS, as delineated fully in the enclosure to this letter.

If operations change from those represented in the enclosure for either of the FCCU operations at the ExxonMobil Baytown Refinery, this approval may become void and a new AMP request will be necessary. If you have any questions about this approval, please contact Ms. Cynthia Kaleri of my staff at kaleri.cynthia@epa.gov or at 214-665-6772.

Sincerely,

Steve Thompson
Chief, Air Enforcement Branch

ENCLOSURE
ExxonMobil Baytown Refinery
Modified Alternative Monitoring Plan (AMP) for
FCCU 2 WGS & FCCU 3 WGS Parametric Monitoring in Lieu of COMS
January 11, 2018

BACKGROUND INFORMATION

Background information and regulatory and Consent Decree (“CD”) requirements were documented in prior EPA AMP approvals for process unit operations at the ExxonMobil Baytown Refinery (“BTRF”). Over time, ExxonMobil has proposed modifications to the originally approved alternative monitoring plan (AMP) for each Wet Gas Scrubber (WGS) for their Fluid Catalytic Cracking Unit (FCCU) No. 2 and FCCU No. 3 based upon operational changes, performance testing results, and in consideration of applicable rule subpart changes. This Enclosure provides EPA’s evaluation of the current operational status and rule requirement implementation for each Wet Gas Scrubber (WGS), where parametric monitoring is proposed in lieu of continuous opacity monitoring system (COMS) requirements for their stack. Since ExxonMobil needs to comply with Opacity and Particulate Matter (PM) emission limitations under NSPS Part 60 Subparts J/Ja (“Refinery NSPS”) and NESHAP Part 63 Subpart UUU (“Refinery MACT II”)², an AMP is necessary in order to address the issue of reliability for monitoring opacity when moisture levels are high in a stack.

TECHNICAL INFORMATION FOR AMP APPROVAL

The WGS Liquid-to-Gas Ratio (“L/G Ratio”) is one critical operating parameter to be monitored for ensuring scrubber performance in all of the scrubber designs evaluated across the refinery sector. Although the L/G Ratio involves measurement of both the total liquid flow rate to the scrubber and the total gas flow rate through the scrubber, EPA views the L/G Ratio as a single operating parameter for the purpose of compliance monitoring. Historically, pressure drop had been used as a critical operating parameter for venturi type scrubbers in addition to the L/G Ratio, since pressure drop had been shown to correlate directly with scrubber efficiency. However, as scrubber designs evolved to meet the needs of multiple pollutant removal and/or flexibility in site-specific process operations, pressure drop became a redundant parameter for monitoring compliance in some scrubber systems³.

Ultimately, the final selection of critical operating parameters is entirely dependent upon ensuring that effective scrubber performance is maintained and that emission limitations are continually met, given those needs associated with facility-specific operations of the FCCU Catalyst Regenerator and the WGS type configuration. Through initial and subsequent performance testing, operating parameter limits (“OPLs”) are established either as a minimum, average, or maximum value over time intervals for reporting that are recognized as

² See EPA AMP Approval letter dated March 14, 2012, pertaining to FCCU 2 WGS and Refinery NSPS requirements; see ExxonMobil letter dated June 22, 2017, pertaining to FCCU 3 WGS and Refinery NSPS requirements (Subpart Ja requirements voluntarily accepted over Subpart J requirements).

³ Examples include variable-throat venturi scrubbers that maintain constant pressure drops with varying gas flows, injection of caustic slurry for increased SO₂ removal, etc.

representative of the performance testing conducted to demonstrate compliance with emission limitations.

Both the FCCU No. 2 and the FCCU No. 3 WGS units are ExxonMobil Low Energy Jet Ejector Venturi (JEV) type scrubbers of identical design (EPN FCCU2WGS; EPN FCCU3WGS). Both JEV WGS units monitor flue gas flow rate via a DP-60/75 MARK 2 flow meter manufactured by ExxonMobil. However, a flow meter for total liquid flow is problematic for both WGS units due to characteristics of the liquid slurry stream used in the process areas. Both JEV WGS units have inlet nozzle size and piping hydraulics that are fixed. Both units utilize a multiple slurry pump system, although each unit may differ with regard to the number of pumps used. The total liquid flow rate and JEV nozzle pressure are directly proportional. In past AMP requests, ExxonMobil presented data that verified the measurement of the JEV pressure correlated well with the WGS slurry pump flowrate (i.e., total pump flow vs venturi pressure) and could be utilized to provide continuous monitoring of the total liquid flow through each WGS, regardless of the number of pumps in operation. Therefore, prior AMP approvals for each FCCU WGS specified use of Exxon's liquid flow calculation method for the JEV pressure and a correlation to the pump curve to determine the liquid flow in each FCCU WGS.

Specifically, EPA identified the following set of OPLs to ensure that each WGS at the ExxonMobil BTRF would function as intended and that emissions from each FCCU Regenerator would continuously meet the regulatory requirements for opacity and particulate matter:

1. Minimum Liquid-to-Gas Ratio (L/G): defined as total liquid flowrate (L) divided by total gas flowrate (G) through the WGS, where L was calculated from the pressure pump curve correlation proposed and G was determined by direct measurement via existing flow meters.
2. Maximum Effluent Stack Gas Temperature (T_{\max}): direct measurement via temperature sensor.

Compliance for the above OPLs was established on a *three-hour hourly rolling average basis*, consistent with the FCCU operating conditions (e.g., coke burn-off rate) and corresponding test data evaluated from the *most recent particulate matter performance test* at the facility. The three-hour basis was consistent with longer test runs incorporating soot-blowing into the test program, to ensure representative testing. Also, an engineering evaluation in conjunction with test data provided by ExxonMobil established that T_{\max} could be set at 200°F for typical operations and in consideration of ambient temperatures, does not change over different various operating conditions.

PROVISIONS FOR MODIFIED AMP

ExxonMobil BTRF has requested modifying only the liquid flow calculation method being used to establish the minimum L/G for each FCCU WGS. No change was necessary or proposed for the operating parameters already established, nor for how total gas flowrate or the maximum effluent gas temperature are determined, other than updating the compliance terms under the current NSPS and NESHAP rules.

Since NESHAP Subpart UUU was modified to remove Startup, Shutdown, and Malfunction (SSM) exemptions, ExxonMobil BTRF proposed updating the established liquid flow calculation so that the OPL is more representative of liquid flows across all pump operating scenarios. Data demonstrating the change to the liquid flowrate calculations is based upon a restriction orifice (RO) method. The method will still use the inlet JEV pressure and will use the JEV nozzle size as the RO. In addition, the pressure instruments used for the liquid flow calculations will follow the requirements in 40 CFR § 63.1572(c)(1) and corresponding Table 41, Item 7.

Updated Liquid Flow Calculation

$$L = \sum_{1}^n Q_{JEV}$$

$$Q_{JEV} = 27.7 * D^2 * \sqrt{P}$$

L = total liquid flow to WGS (gal/min)

QJEV = flow at JEV nozzle (gal/min)

27.7 = conversion factor (gal/(min psig^{0.5} inches²))

D = orifice diameter of the JEV nozzle (inches)

P = pressure at the JEV nozzle (psig)

N = number of JEV nozzles (e.g., FCCU2 – three (3); FCCU3 – four (4))

EPA has reviewed Exxon's example comparison of values for the FCCU 3 WGS to demonstrate the proposed change to liquid flow calculations and the L/G ratios and approves the proposed change in calculations for both FCCU 2 and FCCU 3 WGS Units. Implementation of the updated liquid flow calculation method will become effective once a performance test is conducted and new values for L/G are then established for each FCCU WGS Unit.

The same set of OPLs previously approved, with the updated liquid flow calculation methodology, will ensure that each WGS at the ExxonMobil BTRF will function as intended and that emissions from each FCCU Regenerator will continuously meet the regulatory requirements for opacity and particulate matter:

1. **Minimum Liquid-to-Gas Ratio (L/G):** defined as total liquid flowrate (L) divided by total gas flowrate (G) through the WGS. L will be calculated by the equation provided above and G will be determined by direct measurement via existing flow meters.
2. **Maximum Effluent Stack Gas Temperature (T_{max}):** direct measurement via temperature sensor.

Compliance for the above OPLs is still determined on a three-hour hourly rolling average basis, consistent with the FCCU operating conditions (e.g., coke burn-off rate) and corresponding test data evaluated from the most recent particulate matter performance test at the facility for L/G and the engineering evaluation already conducted for T_{max} for each WGS.

Enclosure: AMP Approval, Updated for 2017

ExxonMobil Baytown Refinery, FCCU 2 WGS & FCCU 3 WGS

Page 4 of 4

As previously established per the requirements at 40 CFR § 60.104a(e), periodic performance tests must be conducted in order to verify that the established values for OPLs are still representative of facility operations and WGS performance, or in order to determine new representative values. A copy of each performance test report must be submitted to EPA and the permitting authority, along with any changes to the prior L/G values resulting from the data obtained during testing or any new engineering evaluation conducted for T_{\max} values at each FCCU WGS.

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Protecting Texas by Reducing and Preventing Pollution

March 12, 2018

Ms. Kimberly Buckles
ExxonMobil
5000 Bayway Dr.
Baytown, Texas 77520

Re: Request for Modification to Monitoring for Chapter 115 Highly-Reactive Volatile Organic Compound (HRVOC) Rules

Dear Ms. Buckles:

This letter is in response to ExxonMobil's request dated February 7, 2018 regarding a modification to the HRVOC monitoring requirements under 30 Texas Administrative Code (TAC) Chapter 115, §115.725 for flares located at the ExxonMobil Baytown Olefins Plant (BOP), Baytown Chemical Plant (BTCP), and Baytown Refinery (BTRF) facilities in Baytown, Texas. Section 115.725(m)(1) allows the use of an online calorimeter as an alternative to determining net heating value of the flare gas stream by monitoring the constituents according to §115.725(d)(2). ExxonMobil is requesting approval to use the specific gravity monitors equipped on online calorimeters used to monitoring net heating value to also monitor and determine molecular weight in lieu of determining molecular weight by monitoring non-HRVOC constituents according to §115.725(d)(2).

Section 115.725(m) allows the executive director to approve minor modifications to the required monitoring methods or alternate monitoring methods if validated according to 40 Code of Federal Regulations, Part 63, Appendix A, Method 301. Based on the information provided by ExxonMobil, the specific gravity cells equipped on the online calorimeters used by ExxonMobil will provide adequate accuracy of the flare gas specific gravity to determine molecular weight for the purposes of §115.725(d)(2). Therefore, the TCEQ approves ExxonMobil's request to use the calorimeters' specific gravity cell to determine the molecular weight of the flare vent gas in lieu of monitoring non-HRVOC constituents sufficient to determine the molecular weight as required by §115.725(d)(2). The HRVOC constituent monitoring requirements of §115.725(d)(2) continue to apply. This approval is specific to flares identified in Table 1 below located at the ExxonMobil BOP, BTCP, and BTRF facilities, and is only applicable to the monitoring requirements of 30 TAC Chapter 115, Subchapter H, Division 1. While ExxonMobil's requested modification is a major modification to the monitoring requirements of §115.725, the TCEQ waives the Method 301 validation requirement because such a validation is unnecessary in this case.

Ms. Kimberly Buckles
Page 2
March 12, 2018

ExxonMobil also requested approval to change the net heating value used for hydrogen in net heating value calculations and to use the equation in Title 40 Code of Federal Regulations, Part 63, Subpart CC to determine net heating value of the flare vent gas. However, these two requested changes are actually requests for alternate means of control and cannot be approved via §115.725(m). Requests for alternate means of control must be submitted via 30 TAC Chapter 115, Subchapter J, Division 1, Alternate Means of Control. For additional information regarding requests for alternate means of control, please contact Anne Inman of the Air Permits Division at 512-239-1276 or Anne.Inman@tceq.texas.gov.

If you have any questions regarding the TCEQ's determination regarding the approval of the alternate molecular weight determination, please contact Vincent Meiller of the Air Quality Planning Section at the letterhead address, Mail Code MC-206, by telephone at 512-239-6041, or by e-mail at Vincent.Meiller@tceq.texas.gov.

Sincerely,

Donna F. Huff, Manager
Air Quality Planning Section

ENVIRONMENTAL PROTECTION AGENCY

[EPA-HQ-OAR-2014-0738 and EPA-HQ-OAR-2010-0682; FRL-9983-26-OAR]

Notice of Final Approval for an Alternative Means of Emission Limitation at ExxonMobil Corporation; Marathon Petroleum Company, LP (for itself and on behalf of its subsidiary, Blanchard Refining, LLC); Chalmette Refining, LLC; and LACC, LLC

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice; final approval.

SUMMARY: This notice announces our approval of the Alternative Means of Emission Limitation (AMEL) requests under the Clean Air Act (CAA) submitted from ExxonMobil Corporation; Marathon Petroleum Company, LP (for itself and on behalf of its subsidiary, Blanchard Refining, LLC); and Chalmette Refining, LLC to operate flares and multi-point ground flares (MPGFs) at several refineries in Texas and Louisiana, and from LACC, LLC to operate flares at a chemical plant in Louisiana. This approval notice specifies the operating conditions and monitoring, recordkeeping, and reporting requirements that these facilities must follow to demonstrate compliance with the approved AMEL.

DATES: The approval of the AMEL requests from ExxonMobil Corporation; Marathon Petroleum Company, LP (for itself and on behalf of its subsidiary, Blanchard Refining, LLC); Chalmette

Refining, LLC; and LACC, LLC to operate certain flares at the refineries and a chemical plant, as specified in this notice, is effective on September 17, 2018.

ADDRESSES: The Environmental Protection Agency (EPA) has established a docket for this action under Docket ID No. EPA-HQ-OAR-2014-0738. All documents in the docket are listed on the <https://www.regulations.gov> website. Although listed, some information is not publicly available, e.g., confidential business information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available either electronically through <http://www.regulations.gov> or in hard copy at EPA Docket Center, EPA WJC West Building, Room Number 3334, 1301 Constitution Ave. NW, Washington, DC. The Public Reading Room hours of operation are 8:30 a.m. to 4:30 p.m. Eastern Standard Time (EST), Monday through Friday. The telephone number for the Public Reading Room is (202) 566-1744, and the telephone number for the Docket Center is (202) 566-1742.

FOR FURTHER INFORMATION CONTACT: For questions about this final action, contact Ms. Angie Carey, Sector Policies and Programs Division (E143-01), Office of Air Quality Planning and Standards, U.S. Environmental Protection Agency, Research Triangle Park, North Carolina 27711; telephone number: (919) 541-2187; fax number: (919) 541-0516; and email address: carey.angela@epa.gov.

SUPPLEMENTARY INFORMATION: *Preamble acronyms and abbreviations.* We use multiple acronyms and terms in this preamble. While this list may not be exhaustive, to ease the reading of this preamble and for reference purposes, the EPA defines the following terms and acronyms here:

AMEL alternative means of emission limitation
BTU/scf British thermal units per standard cubic foot
CAA Clean Air Act
CBI confidential business information
CFR Code of Federal Regulations
EPA Environmental Protection Agency
Eqn equation
g/mol grams per gram mole
HAP hazardous air pollutants
HP high pressure
LFL lower flammability limit
LFL_{cz} lower flammability limit of combustion zone gas
LFL_{vg} lower flammability limit of flare vent gas

LRGO linear relief gas oxidizer
MPGF multi-point ground flare
NESHAP national emission standards for hazardous air pollutants
NHV net heating value
NHV_{cz} net heating value of combustion zone gas
NHV_{vg} net heating value of flare vent gas
NSPS new source performance standards
OAQPS Office of Air Quality Planning and Standards
scf standard cubic feet
SKEC steam-assisted kinetic energy combustor
TCEQ Texas Commission on Environmental Quality
VOC volatile organic compounds

Organization of This Document. The information in this notice is organized as follows:

- I. Background
 - A. Summary
 - B. Regulatory Flare Requirements
- II. Summary of Public Comments on the AMEL Requests
- III. AMEL for the Flares

I. Background

A. Summary

In a **Federal Register** notice dated April 25, 2018, the EPA provided public notice and solicited comment on the requests under the CAA from ExxonMobil Corporation; Marathon Petroleum Company, LP (for itself and on behalf of its subsidiary, Blanchard Refining, LLC's); and Chalmette Refining, LLC for the operation of flares and MPGFs at several refineries in Texas and Louisiana, and from LACC, LLC to operate flares at a chemical plant in Louisiana (see 83 FR 18034). This action solicited comment on all aspects of the AMEL requests, including the operating conditions specified in that action that are necessary to achieve a reduction in emissions of volatile organic compounds and organic hazardous air pollutants at least equivalent to the reduction in emissions required by various standards in 40 CFR parts 60, 61, and 63 that apply to emission sources that would be controlled by these flares and MPGFs. These standards incorporate the flare design and operating requirements in 40 CFR part 60 and 63 General Provisions (i.e., 40 CFR 60.18(b) and 63.11(b)) into the individual new source performance standards (NSPS) and maximum achievable control technology (MACT) subparts, except for the Petroleum Refinery MACT, 40 CFR part 63, subpart CC, which specifies its flare requirements within the subpart (i.e., 40 CFR 63.670). Four of the requests are for flares located at petroleum refineries, while the request from LACC, LLC is for a flare design at a chemical manufacturing facility. None of the

flares located at petroleum refineries can meet the flare tip velocity limits in the Petroleum Refinery MACT, 40 CFR part 63, subpart CC. In addition, flares at these refineries and at LACC's chemical plant that are subject to other 40 CFR part 60 and 63 standards cannot meet the flare tip velocity limits contained in the applicable General Provisions to 40 CFR part 60 and 63.

This action provides a summary of the comments received as part of the public review process, our response to those comments, and our approval of these AMEL requests.

B. Regulatory Flare Requirements

ExxonMobil, Marathon, Blanchard, and Chalmette provided the information

specified in the flare AMEL framework set forth in the Petroleum Refinery MACT at 40 CFR 63.670(r) to support their AMEL requests. LACC provided the information specified in the flare AMEL framework finalized on April 21, 2016 (81 FR 23486), to support its AMEL request. The ExxonMobil Corporation Baytown Refinery in Baytown, Texas, is seeking an AMEL to operate a gas-assisted flare, Flare 26, during periods of startup, shutdown, upsets, and emergency events, as well as during fuel gas imbalance events. Marathon Petroleum Company, LP's Garyville, Louisiana Refinery, and Blanchard Refining, LLC's Galveston Bay Refinery (GBR) in Texas City,

Texas, are seeking AMELs to operate their flares only during periods of startup, shutdown, upsets, and emergency events. Chalmette Refining, LLC in Chalmette, Louisiana, is seeking an AMEL to operate its flare, No. 1 Flare, during periods of upset and emergency events. LACC, LLC is seeking an AMEL to operate flares at its chemical plant in Lake Charles, Louisiana, during startups, shutdowns, upsets, and emergency events. See Table 1 for a list of regulations, by subparts, that each refinery and chemical plant has identified as applicable to the flares described above.

TABLE 1—SUMMARY OF APPLICABLE RULES THAT MAY APPLY TO STREAMS CONTROLLED BY FLARES

Applicable rules with vent streams going to control device(s)	Exxon Mobil Baytown, Texas Flare 26	Marathon Garyville, LA MPGF	Blanchard Refining GBR MPGF	Chalmette No. 1 Flare	LACC	Rule citation from title 40 CFR that allow for use of a flare	Provisions for alternative means of emission limitation
NSPS Subpart VV	x	x	x	60.482–10(d)	60.484(a)–(f).
NSPS Subpart VVa	x	x	x	x	60.482–10a(d)	60.484a(a)–(f).
NSPS Subpart NNN	x	x	x	x	x	60.662(b)	CAA section 111(h)(3).
NSPS Subpart QQQ	x	x	x	60.692–5(c)	42 U.S.C. 7411(h)(3).
NSPS Subpart RRR	x	x	x	x	60.702(b)	CAA section 111(h)(3).
NSPS Subpart Kb	x	x	x	x	60.112b(a)(3)(ii)	60.114b.
NESHAP Subpart V	x	x	x	x	61.242–11(d)	40 CFR 63.6(g); 42 U.S.C. 7412(h)(3).
NESHAP Subpart J	x	61.242–11(d)	40 CFR 63.6(g); 42 U.S.C. 7412(h)(3).
NESHAP Subpart Y	x	x	x	61.271–(c)(2)	40 CFR 63.6(g); 40 CFR 61.273; 42 U.S.C. 7412(h)(3).
NESHAP Subpart BB	x	x	x	61.302(c)	40 CFR 63.6(g); 42 U.S.C. 7412(h)(3).
NESHAP Subpart FF	x	x	x	x	61.349(a)(2)	61.353(a); also see 61.12(d).
NESHAP Subpart F	x	x	x	x	63.103(a)	63.6(g); 42 U.S.C. 7412(h)(3).
NESHAP Subpart G	x	x	x	x	63.113(a)(1)(i), 63.116(a)(2), 63.116(a)(3), 63.119(e), 63.120(e)(1) through (4), 63.126(b)(2)(i), 63.128(b), 63.139(c)(3), 63.139(d)(3), 63.145(j).	63.6(g); 42 U.S.C. 7412(h)(3).
NESHAP Subpart H	x	x	x	x	63.172(d), 63.180(e)	63.177; 42 U.S.C. 7412(h)(3).

NESHAP Subpart UU	x	63.1034	63.1021(a)–(d).
NESHAP Subpart YY	x	Table 7 to 63.1103(e) cross-references to NESHAP subpart SS above.	63.1113.
NESHAP Subpart EEEE.	x	x	x	63.2378(a), 63.2382, 63.2398	63.6(g); 42 U.S.C. 7412(h)(3).

The provisions for the NSPS and National Emission Standards for Hazardous Air Pollutants (NESHAP) cited in Table 1 that ensure flares meet certain specific requirements when used to satisfy the requirements of the NSPS or NESHAP were established as work practice standards pursuant to CAA sections 111(h)(1) or 112(h)(1). For standards established according to these provisions, CAA sections 111(h)(3) and 112(h)(3) allow the EPA to permit the use of an AMEL by a source if, after

notice and opportunity for comment,¹ it is established to the Administrator's satisfaction that such an AMEL will achieve emission reductions at least equivalent to the reductions required under the CAA section 111(h)(1) or 112(h)(1) standard. As noted in Table 1, many of the NSPS and NESHAP in the table above also include specific

¹ CAA section 111(h)(3) specifically requires that the EPA provide an opportunity for a public hearing. The EPA provided an opportunity for a public hearing in the April 25, 2018, Federal Register action. However, no public hearing was requested.

regulatory provisions allowing sources to request an AMEL.

II. Summary of Public Comments on the AMEL Requests

The EPA received four public comments on this action. Specifically, the EPA received suggested changes and clarifications from LACC, LLC, Marathon Petroleum Company, LP (for itself and on behalf of its subsidiary, Blanchard Refining, LLC), and ExxonMobil Corporation. The EPA also received one comment that does not mention any of the AMEL requests at issue and is, therefore, outside the scope

of the action. As discussed in more detail below, we have modified or otherwise clarified certain operating conditions in response to comments.² All of the comments within the scope of the AMEL requests were supportive of the EPA approving the AMEL requests, and none of the comments raised issues with the EPA's authority to approve these AMEL requests under the CAA. None of the commenters asserted that the EPA lacked authority to approve the AMEL requests or that the AMEL requests would not achieve at least equivalent emissions reductions as flares that meet the standards in the General Provisions or in the Petroleum Refinery MACT at 40 CFR 63.670(r).

Comment: LACC, LLC commented that the monitoring requirement in section (3) to install a video camera capable of continuously recording (*i.e.*, at least one frame every 15 seconds with time and date stamps) images of the flare flame at a reasonable distance and suitable angle, will work for their MPGF, but not for their enclosed ground flare. LACC stated that it is not technically feasible to install a video camera and monitor the flare flame within the enclosed ground flare. Alternatively, LACC stated that it can monitor for the presence of visible emissions from the enclosed ground flare by using a video camera to monitor at the exit of the stack exhaust.

Response: We agree that, although the camera would not be able to directly monitor visible emissions from the flare flame because of the enclosure, conducting visible emissions observations at the stack would be a reliable indicator of compliance with the requirements in section (3) below. Therefore, we accept this alternative and have made the appropriate change in section (3) below.

Comment: Marathon Petroleum Company, LP commented that the operating conditions in Table 2 do not reflect what they requested in their AMEL for the MPGF at their Garyville refinery. They stated that they needed separate NHV_{cz} limits for the pressure-assisted linear relief gas oxidizers (LRGO burners) and the steam-assisted steam kinetic energy combustors (SKEC burners) when both are being used simultaneously. Marathon explained that the SKEC burners would have a considerably different NHV_{cz} value because of steam assist. This is because the steam assist is included in the NHV_{cz} calculation for the SKEC burners,

but not for the LRGO burners, given that the LRGO burners do not have steam assist.

Response: The EPA acknowledges that the April notice did not reflect Marathon Petroleum Company, LP's supplemental request for the Garyville MPGF to maintain separate burner limits such that the SKEC burners would meet the NHV_{cz} target from the SKEC equation and the LRGO burners would meet 600 British thermal units per standard cubic feet (BTU/scf). We discussed with Marathon its supplemental request upon receiving the comment. As we explained in that discussion, based on our review of the information provided by Marathon, the steam-to-vent gas ratio for the SKEC burners is not high enough to significantly affect the NHV_{cz} during the high pressure flaring scenario. Therefore, we conclude that the burner requirements as set out in the April 25, 2018, AMEL document are appropriate. Marathon concurred with this conclusion in an email response after the comment period closed (available in Docket ID No. EPA-HQ-OAR-2014-0738 and EPA-HQ-OAR-2010-0682).

Comment: Marathon Petroleum Company, LP commented that the requirement should be $NHV_{vg} = NHV_{cz}$ with a limit of ≥ 600 BTU/scf for the LH burner, and $NHV_{cz} \geq 600$ BTU/scf for LRGO burners. Marathon notes that, as explained in its February 2, 2018, and March 27, 2018, supplemental letters, since the LH burner is air-assisted, therefore, the LH burner limitations provided in its request correspond to the NHV_{vg} and not the NHV_{cz} . Marathon further notes that the Petroleum Refinery requirements at 40 CFR 63.670(m)(1) states that $NHV_{vg} = NHV_{cz}$ when there is no pre-mix assist air flow.

Response: For the reasons provided in Marathon's comment, we agree that for the LH burner, which is perimeter air assisted and not pre-mix air assisted, the NHV_{vg} equals NHV_{cz} . We, therefore, made this change in Table 2 below.

Comment: ExxonMobil Corporation commented on a typographical correction in Table 2 for the Baytown, Texas, Flexicoker Flare 26. The proposed alternative operating condition was listed as ≥ 270 BTU/scf NHV_{cz} and velocity of < 361 feet per second (ft/sec). However, the performance test results for the Flare 26 demonstrate that the destruction efficiency met 98 percent at 361 ft/sec.

Response: We accept this correction and made the change in Table 2 to ≤ 361 ft/sec.

Comment: ExxonMobil Corporation commented that the EPA should include a default molecular weight for pipeline

natural gas that corresponds to an NHV of 920 BTU/scf listed in 40 CFR 63.670(j)(5).

Response: We agree and are specifying the molecular weight of pipeline natural gas as 16.85 grams per gram mole (g/mol). It would be burdensome for Exxon to take samples of natural gas to determine molecular weight, when very little changes in molecular weight are expected. Therefore, we are specifying the molecular weight of natural gas of 16.85 can be used. This molecular weight is based on our default natural gas composition that was used to determine the net heating value in 40 CFR 63.670.

Comment: ExxonMobil Corporation commented that the accuracy and calibration requirements in section (1)(f) of the initial Federal Register document should apply only to flares at chemical plants seeking AMEL approval since flares such as Exxon's Flare 26 is already subject to the accuracy and calibration requirements in the Petroleum Refinery MACT at 40 CFR 63.671(a)(1) and (4) and Table 13.

Response: We agree and have clarified in section (1)(f) below that the accuracy and calibration requirements listed in Table 4 do not apply to refinery flares subject to requirements at 40 CFR 63.671(a)(1) and (4) and Table 13 of 40 CFR part 63, subpart CC.

Comment: ExxonMobil Corporation commented that the Flare 26 follows the Petroleum Refinery MACT requirement at 40 CFR part 63, subpart CC, for pilot flame operations and does not use cross-lighting for the flare operation. They stated that the EPA should clarify in section (2) that the Flare 26 is only required to maintain flare pilots per the Petroleum Refinery MACT requirements in 40 CFR 63.670(b).

Response: We agree that the requirements in section (2), which apply to flares that cross light, should not apply to Flare 26 because it does not use cross-lighting. We have made this change in section (2) below.

Comment: ExxonMobil Corporation commented that the EPA should clarify which reporting requirements apply to the Flare 26 in section (6) and clarify that the reporting requirements for the flare tip velocity and NHV_{cz} are applicable when regulated material is routed to the flare for at least 15 minutes.

Response: While we believe that the records required in section (6)(c) are essentially the same as the reporting requirements in Petroleum Refinery NESHAP, 40 CFR part 63, subpart CC, section (6)(c) requires additional records related to the operation of MPGFs, which do not apply to Flare 26. Further,

² As explained below, we have clarified the reporting requirements for Exxon's Flare 26 in response to a comment by Exxon. We have similarly clarified Marathon's Garyville's and GBR's MPGF's reporting requirements as a result of this comment.

we agree that the operating limits for NHV_{cz} and V_{tip} apply whenever regulated material is routed to the flares for at least 15 minutes, as specified by 40 CFR part 63, subpart CC; Therefore, we are requiring that Flare 26 comply with the reporting requirements in the Petroleum Refinery NESHAP, 40 CFR part 63, subpart CC, instead of section (6) as part of this AMEL approval. However, MPGFs located at petroleum refineries must comply with the additional reporting requirements for MPGFs in (6)(c)(iv) and (v). To avoid other potential confusion, we are clarifying the applicability of section

(6)(c) to all the flares covered in this notice. Specifically, section (6)(c) below provides that flares at refineries must meet the requirements in the Petroleum Refinery MACT in 40 CFR 63.655(g)(11)(i)–(iii), except that the applicable alternative operating conditions listed in Table 2 apply instead of the operating limits specified in 40 CFR 63.670(d) through (f). In addition, for refinery flares that are MPGFs, notification shall also include records specified in section (6)(c)(iv)–(v). For LACC MPGFs, the notification shall include the records specified in section (6)(c)(i)–(v).

III. AMEL for the Flares

Based upon our review of the AMEL requests and the comments received through the public comment period, we are approving these AMEL requests and are establishing operating conditions for the flares at issue. The AMEL and the associated operating conditions are specified in Table 2 and accompanying paragraphs. These operating conditions will ensure that these flares will achieve emission reductions at least equivalent to flares complying with the flare requirements under the applicable NESHAP and NSPS identified in Table 1.

TABLE 2—ALTERNATIVE OPERATING CONDITIONS

AMEL submitted	Company	Affected facilities	Flare type(s)	Alternative operating conditions
11/7/17	ExxonMobil	Baytown, TX Flexicoker Flare 26.	Elevated gas-assist flare.	≥ 270 BTU/scf NHV_{cz} and velocity ≤ 361 (ft/sec).
10/7/17	Marathon	Garyville, LA	2 MPGFs	When both SKEC and LRGO burners are being used, the higher of ≥ 600 BTU/scf NHV_{cz} or $\geq 127.27 \ln(v_{vg}) - 110.87 NHV_{cz}$. When only the SKEC burner is being used $\geq 127.27 \ln(v_{vg}) - 110.87 NHV_{cz}$.
10/7/17	Marathon/Blanchard Refining.	GBR (Texas City, TX).	MPGF	$NHV_{vg} \geq 600$ BTU/scf for the LH burner, and $NHV_{cz} \geq 600$ BTU/scf for LRGO burners.
9/19/17	Chalmette Refining	Chalmette, LA	Elevated multi-point flare.	$\geq 1,000$ BTU/scf NHV_{cz} or $LFL_{cz} \leq 6.5$ vol%.
5/1/17	LACC	Lake Charles, LA ...	2 MPGFs	≥ 1075 BTU/scf NHV_{cz} for INDAIR Burners; ≥ 800 BTU/scf NHV_{cz} for LRGO only.

(1) All flares must be operated such that the combustion zone gas net heating value (NHV_{cz}) or the lower flammability in the combustion zone (LFL_{cz}) as specified in Table 2 is met. Owners or operators must demonstrate compliance with the applicable NHV_{cz} or LFL_{cz} specified in Table 2 on a 15-minute block average. Owners or operators must calculate and monitor for the NHV_{cz} or LFL_{cz} according to the following:

(a) Calculation of NHV_{cz}

(i) If an owner or operator elects to use a monitoring system capable of continuously measuring (i.e., at least once every 15 minutes), calculating, and recording the individual component concentrations present in the flare vent gas, NHV_{vg} shall be calculated using the following equation:

$$NHV_{vg} = \sum_{i=1}^n x_i NHV_i$$

(Eqn. 1)

Where:

NHV_{vg} = Net heating value of flare vent gas, BTU/scf. Flare vent gas means all gas found just prior to the tip. This gas includes all flare waste gas (i.e., gas from facility operations that is directed to a flare for the purpose of disposing the

gas), flare sweep gas, flare purge gas, and flare supplemental gas, but does not include pilot gas.

i = Individual component in flare vent gas.

n = Number of components in flare vent gas.

x_i = Concentration of component i in flare vent gas, volume fraction.

NHV_i = Net heating value of component i determined as the heat of combustion where the net enthalpy per mole of offgas is based on combustion at 25 degrees Celsius (°C) and 1 atmosphere (or constant pressure) with water in the gaseous state from values published in the literature, and then the values converted to a volumetric basis using 20 °C for “standard temperature.” Table 3 summarizes component properties including net heating values.

(ii) If the owner or operator uses a continuous net heating value monitor, the owner or operator may, at their discretion, install, operate, calibrate, and maintain a monitoring system capable of continuously measuring, calculating, and recording the hydrogen concentration in the flare vent gas. The owner or operator shall use the following equation to determine NHV_{vg} for each sample measured via the net heating value monitoring system.

$$NHV_{vg} = NHV_{measured} + 938x_{H2}$$

(Eqn. 2)

Where:

NHV_{vg} = Net heating value of flare vent gas, BTU/scf.

$NHV_{measured}$ = Net heating value of flare vent gas stream as measured by the continuous net heating value monitoring system, BTU/scf.

x_{H2} = Concentration of hydrogen in flare vent gas at the time the sample was input into the net heating value monitoring system, volume fraction.

938 = Net correction for the measured heating value of hydrogen (1,212 – 274), BTU/scf.

(iii) For non-assisted flare burners, and the GBR LH burner, $NHV_{vg} = NHV_{cz}$. For assisted burners, such as the Marathon Garyville MPGF SKEC burners, and the Exxon Flare 26 gas-assisted burner, NHV_{cz} is calculated using Equation 3.

$$NHV_{cz} = \frac{Q_{vg} \times NHV_{vg} + Q_{ag} \times NHV_{ag}}{(Q_{vg} + Q_{ag})}$$

(Eqn. 3)

Where:

NHV_{cz} = Net heating value of combustion

zone gas, BTU/scf.
 NHV_{vg} = Net heating value of flare vent gas for the 15-minute block period as determined according to (1)(a)(i), BTU/scf.
 Q_{vg} = Cumulative volumetric flow of flare vent gas during the 15-minute block period, scf.
 Q_{ag} = Cumulative volumetric flow of assist gas during the 15-minute block period, scf flow rate, scf.
 NHV_{ag} = Net heating value of assist gas, BTU/scf; this is zero for air or for steam.

(b) Calculation of LFL_{cz}

(i) The owner or operator shall determine LFL_{cz} from compositional analysis data by using the following equation:

$$LFL_{vg} = \frac{1}{\sum_{i=1}^n \left(\frac{\chi_i}{LFL_i} \right)} \times 100\%$$

(Eqn. 4)

Where:

LFL_{vg} = Lower flammability limit of flare vent gas, volume percent (vol %).
 n = Number of components in the vent gas.
 i = Individual component in the vent gas.
 χ_i = Concentration of component i in the vent gas, vol %.
 LFL_i = Lower flammability limit of component i as determined using values published by the U.S. Bureau of Mines (Zabetakis, 1965), vol %. All inerts, including nitrogen, are assumed to have an infinite LFL (e.g., $LFL_{N_2} = \infty$, so that $\chi_{N_2}/LFL_{N_2} = 0$). LFL values for common flare vent gas components are provided in Table 3.

(ii) For non-assisted flare burners,

$$LFL_{vg} = LFL_{cz}$$

(c) Calculation of V_{tip}
 For the ExxonMobil Flare 26, the owner or operator shall calculate the 15-minute block average V_{tip} by using the following equation:

$$V_{tip} = \frac{Q_{vg}}{Area \times 900}$$

(Eqn. 5)

Where:

V_{tip} = Flare tip velocity, ft/sec.
 Q_{vg} = Cumulative volumetric flow of vent gas over 15-minute block average period, scf.
 $Area$ = Unobstructed area of the flare tip, square ft.
 900 = Conversion factor, seconds per 15-minute block average.

(d) For all flare systems specified in this document, the owner or operator shall install, operate, calibrate, and maintain a monitoring system capable of continuously measuring the volumetric flow rate of flare vent gas (Q_{vg}), the volumetric flow rate of total assist steam (Q_s), the volumetric flow rate of total assist air (Q_a), and the volumetric flow rate of total assist gas (Q_{ag}).

(i) The flow rate monitoring systems must be able to correct for the temperature and pressure of the system and output parameters in standard conditions (i.e., a temperature of 20 °C (68 °F) and a pressure of 1 atmosphere).

(ii) Mass flow monitors may be used for determining volumetric flow rate of flare vent gas provided the molecular

weight of the flare vent gas is determined using compositional analysis so that the mass flow rate can be converted to volumetric flow at standard conditions using the following equation:

$$Q_{vol} = \frac{Q_{mass} \times 385.3}{MW_i}$$

(Eqn. 6)

Where:

Q_{vol} = Volumetric flow rate, scf/sec.
 Q_{mass} = Mass flow rate, pounds per sec.
 385.3 = Conversion factor, scf per pound-mole.
 MW_i = Molecular weight of the gas at the flow monitoring location, pounds per pound-mole.

(e) For each measurement produced by the monitoring system used to comply with (1)(a)(ii), the operator shall determine the 15-minute block average as the arithmetic average of all measurements made by the monitoring system within the 15-minute period.

(f) The owner or operator must follow the accuracy and calibration procedures according to Table 4. Flares at refineries must meet the accuracy and calibration requirements in the Petroleum Refinery MACT at 40 CFR 63.671(a)(1) and (4) and Table 13. Maintenance periods, instrument adjustments, or checks to maintain precision and accuracy and zero and span adjustments may not exceed 5 percent of the time the flare is receiving regulated material.

TABLE 3—INDIVIDUAL COMPONENT PROPERTIES

Component	Molecular formula	MW_i (pounds per pound-mole)	NHV_i (BTU/scf)	LFL_i (volume %)
Acetylene	C_2H_2	26.04	1,404	2.5
Benzene	C_6H_6	78.11	3,591	1.3
1,2-Butadiene	C_4H_6	54.09	2,794	2.0
1,3-Butadiene	C_4H_6	54.09	2,690	2.0
iso-Butane	C_4H_{10}	58.12	2,957	1.8
n-Butane	C_4H_{10}	58.12	2,968	1.8
cis-Butene	C_4H_8	56.11	2,830	1.6
iso-Butene	C_4H_8	56.11	2,928	1.8
trans-Butene	C_4H_8	56.11	2,826	1.7
Carbon Dioxide	CO_2	44.01	0	∞
Carbon Monoxide	CO	28.01	316	12.5
Cyclopropane	C_3H_6	42.08	2,185	2.4

Propylene	C_3H_6	42.08	2,150	2.4

TABLE 3—INDIVIDUAL COMPONENT PROPERTIES—Continued

Component	Molecular formula	MW_i (pounds per pound-mole)	NHV_i (BTU/scf)	LFL_i (volume %)
Water	H ₂ O	18.02	0	∞

* The theoretical net heating value for hydrogen is 274 BTU/scf, but for the purposes of the flare requirement in this subpart, a net heating value of 1,212 BTU/scf shall be used.

TABLE 4—ACCURACY AND CALIBRATION REQUIREMENTS

Parameter	Accuracy requirements	Calibration requirements
Flare Vent Gas Flow Rate	±20 percent of flow rate at velocities ranging from 0.1 to 1 foot per second. ±5 percent of flow rate at velocities greater than 1 foot per second.	Performance evaluation biennially (every 2 years) and following any period of more than 24 hours throughout which the flow rate exceeded the maximum rated flow rate of the sensor, or the data recorder was off scale. Checks of all mechanical connections for leakage monthly. Visual inspections and checks of system operation every 3 months, unless the system has a redundant flow sensor. Select a representative measurement location where swirling flow or abnormal velocity distributions due to upstream and downstream disturbances at the point of measurement are minimized.
Flow Rate for All Flows Other Than Flare Vent Gas.	±5 percent over the normal range of flow measured or 1.9 liters per minute (0.5 gallons per minute), whichever is greater, for liquid flow. ±5 percent over the normal range of flow measured or 280 liters per minute (10 cubic feet per minute), whichever is greater, for gas flow. ±5 percent over the normal range measured for mass flow.	Conduct a flow sensor calibration check at least biennially (every 2 years); conduct a calibration check following any period of more than 24 hours throughout which the flow rate exceeded the manufacturer's specified maximum rated flow rate or install a new flow sensor. At least quarterly, inspect all components for leakage, unless the continuous parameter monitoring system (CPMS) has a redundant flow sensor. Record the results of each calibration check and inspection. Locate the flow sensor(s) and other necessary equipment (such as straightening vanes) in a position that provides representative flow; reduce swirling flow or abnormal velocity distributions due to upstream and downstream disturbances.
Pressure	±5 percent over the normal range measured or 0.12 kilopascals (0.5 inches of water column), whichever is greater.	Review pressure sensor readings at least once a week for straight-line (unchanging) pressure and perform corrective action to ensure proper pressure sensor operation if blockage is indicated. Performance evaluation annually and following any period of more than 24 hours throughout which the pressure exceeded the maximum rated pressure of the sensor, or the data recorder was off scale. Checks of all mechanical connections for leakage monthly. Visual inspection of all components for integrity, oxidation, and galvanic corrosion every 3 months, unless the system has a redundant pressure sensor. Select a representative measurement location that minimizes or eliminates pulsating pressure, vibration, and internal and external corrosion.
Net Heating Value by Calorimeter.	±2 percent of span	Calibration requirements—follow manufacturer's recommendations at a minimum. Temperature control (heated and/or cooled as necessary) the sampling system to ensure proper year-round operation. Where feasible, select a sampling location at least 2 equivalent diameters downstream from and 0.5 equivalent diameters upstream from the nearest disturbance. Select the sampling location at least 2 equivalent duct diameters from the nearest control device, point of pollutant generation, air in-leakages, or other point at which a change in the pollutant concentration or emission rate occurs.
Net Heating Value by Gas Chromatograph.	As specified in Performance Standard (PS) 9 of 40 CFR part 60, appendix B.	Follow the procedure in PS 9 of 40 CFR part 60, appendix B, except that a single daily mid-level calibration check can be used (rather than triplicate analysis), the multi-point calibration can be conducted quarterly (rather than monthly), and the sampling line temperature must be maintained at a minimum temperature of 60 °C (rather than 120 °C).
Hydrogen Analyzer	±2 percent over the concentration measured, or 0.1 volume, percent, whichever is greater.	Specify calibration requirements in your site specific CPMS monitoring plan. Calibration requirements—follow manufacturer's recommendations at a minimum. Specify the sampling location at least 2 equivalent duct diameters from the nearest control device, point of pollutant generation, air in-leakages, or other point at which a change in the pollutant concentration occurs.

(2) The flare system shall be operated with a flame present at all times when in use. Additionally, each stage that cross-lights must have at least two pilots with a continuously lit pilot flame, except for Chalmette's No. 1 Flare, which has one pilot for each stage, excluding stages 8A and 8B. Each pilot flame must be continuously monitored by a thermocouple or any other

equivalent device used to detect the presence of a flame. The time, date, and duration of any complete loss of pilot flame on any of the burners must be recorded. Each monitoring device must be maintained or replaced at a frequency in accordance with the manufacturer's specifications. The ExxonMobil flare, Flare 26, and GBR's LH flare must meet the requirements in

the Petroleum Refinery MACT at 40 CFR 63.670(b) instead of the requirements herein in section (2).

(3) Flares at refineries shall comply with the Petroleum Refinery MACT requirements of 40 CFR 63.670(h). For LACC, LLC's MPGFs, the flare system shall be operated with no visible emissions except for periods not to exceed a total of 5 minutes during any

2 consecutive hours. A video camera that is capable of continuously recording (*i.e.*, at least one frame every 15 seconds with time and date stamps) images of the flare flame and a reasonable distance above the flare flame at an angle suitable for visible emissions observations must be used to demonstrate compliance with this requirement. For LACC's enclosed ground flare, LACC must install a video camera that is capable of continuously recording (*i.e.*, at least one frame every 15 seconds with time and date stamps) the stack exhaust exit at a reasonable distance and at an angle suitable for visible emissions observation in order to demonstrate compliance with this requirement. The owner or operator must provide real-time video surveillance camera output to the control room or other continuously manned location where the video camera images may be viewed at any time.

(4) For the MPGFs and Chalmette's No. 1 Flare, the owner or operator of a flare system shall install and operate pressure monitor(s) on the main flare header, as well as a valve position indicator monitoring system capable of monitoring and recording the position for each staging valve to ensure that the flare operates within the range of tested conditions or within the range of the manufacturer's specifications. Flares at refineries must meet the accuracy and calibration requirements in the Petroleum Refinery MACT at 40 CFR 63.671(a)(1) and (4) and Table 13. The pressure monitor at LACC shall meet the accuracy and calibration requirements in Table 4. Maintenance periods, instrument adjustments or checks to maintain precision and accuracy, and zero and span adjustments may not exceed 5 percent of the time the flare is receiving regulated material.

(5) Recordkeeping Requirements

(a) All data must be recorded and maintained for a minimum of 3 years or for as long as required under applicable rule subpart(s), whichever is longer.

(6) Reporting Requirements

(a) The information specified in section III(6)(b) and (c) below must be reported in the timeline specified by the applicable rule subpart(s) for which the flare will control emissions.

(b) Owners or operators shall include the final AMEL operating requirements for each flare in their initial Notification of Compliance status report.

(c) The owner or operator shall notify the Administrator of periods of excess emissions in their Periodic Reports. The owner or operator of refinery flares shall meet the reporting requirements in the Petroleum Refinery MACT in 40 CFR

63.655(g)(11)(i)–(iii), except that the applicable alternative operating conditions listed in Table 2 apply instead of the operating limits specified in 40 CFR 63.670(d) through (f). In addition, for refinery flares that are MPGFs, notification shall also include records specified in section (iv)–(v) below. For LACC MPGFs, the notification shall include the records specified in section (i)–(v) below.

(i) Records of each 15-minute block for all flares during which there was at least 1 minute when regulated material was routed to the flare and a complete loss of pilot flame on a stage of burners occurred, and for all flares, records of each 15-minute block during which there was at least 1 minute when regulated material was routed to the flare and a complete loss of pilot flame on an individual burner occurred.

(ii) Records of visible emissions events (including the time and date stamp) that exceed more than 5 minutes in any 2-hour consecutive period.

(iii) Records of each 15-minute block period for which an applicable combustion zone operating condition (*i.e.*, NHV_{cz} or LFL_{cz}) is not met for the flare when regulated material is being combusted in the flare. Indicate the date and time for each period, the NHV_{cz} and/or LFL_{cz} operating parameter for the period, the type of monitoring system used to determine compliance with the operating parameters (*e.g.*, gas chromatograph or calorimeter), and also indicate which high-pressure stages were in use.

(iv) Records of when the pressure monitor(s) on the main flare header show the flare burners are operating outside the range of tested conditions or outside the range of the manufacturer's specifications. Indicate the date and time for each period, the pressure measurement, the stage(s) and number of flare burners affected, and the range of tested conditions or manufacturer's specifications.

(v) Records of when the staging valve position indicator monitoring system indicates a stage of the flare should not be in operation and is or when a stage of the flare should be in operation and is not. Indicate the date and time for each period, whether the stage was supposed to be open, but was closed, or vice versa, and the stage(s) and number of flare burners affected.

Dated: September 11, 2018.

Panagiotis Tsirigotis,
Director, Office of Air Quality Planning and Standards.

[FR Doc. 2018–20148 Filed 9–14–18; 8:45 am]

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

[FRL–9983–85—Region 3]

Clean Water Act: West Virginia's NPDES Program Revision

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of revision, public comment period, and opportunity to request a public hearing.

SUMMARY: The State of West Virginia has submitted revisions to its authorized National Pollutant Discharge Elimination System (NPDES) program for the U.S. Environmental Protection Agency's (EPA) review. These revisions consist of amendments to the West Virginia Water Pollution Control Act codified in Senate Bill 357 (SB 357) and to West Virginia's Code of State Regulations codified as House Bill 2283 (HB 2283). The EPA has determined that the submitted revisions constitute a substantial revision to West Virginia's authorized NPDES program. Accordingly, the EPA is requesting public comment and providing a notice of an opportunity to request a public hearing. Copies of SB357 and HB2283 are available for public inspection as indicated below.

DATES: Comments must be submitted in writing to EPA on or before October 17, 2018.

ADDRESSES: Comments on the WV NPDES Program revisions should be sent to Francisco Cruz, Water Protection Division (3WP41), U.S. Environmental Protection Agency Region 3, 1650 Arch Street, Philadelphia, PA 19103–2019 or email to cruz.francisco@epa.gov. Oral comments will not be considered. Underlying documents from the administrative record for this decision are available for public inspection at the above address. Please contact Mr. Francisco Cruz to schedule an inspection. The public, during the term of this **Federal Register** notice, can request a public hearing. Such a hearing will be held if there is significant public interest based on requests received.

FOR FURTHER INFORMATION CONTACT: For additional information, contact Francisco Cruz at (215) 814–5734.

SUPPLEMENTARY INFORMATION: Section 402 of the Federal Clean Water Act (CWA) created the NPDES program under which the EPA may issue permits for the discharge of pollutants into waters of the United States under conditions required by the CWA. Section 402(b) allows states to assume NPDES program responsibilities upon approval by the EPA. On May 10, 1982,

Bryan W. Shaw, Ph.D., P.E., *Chairman*
Toby Baker, *Commissioner*
Jon Niermann, *Commissioner*
Stephanie Bergeron Perdue, *Interim Executive Director*

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Protecting Texas by Reducing and Preventing Pollution

9489 0090 0027 6009 3652 90

May 25, 2018

MS DIANE OTTO
SSHE DEPT ENVIRONMENTAL ADVISOR
EXXONMOBIL REFINING & SUPPLY COMPANY
BAYTOWN COMPLEX
5000 BAYWAY DRIVE CAB W-119
BAYTOWN TEXAS 77520

Re: Alternative Method of Control (AMOC) No. 99
ExxonMobil Refining & Supply Company
Flare 26 Alternative Emission Limits
Baytown Refinery, Harris County
Regulated Entity Number: RN102579307
Customer Reference Number: CN600123939
Associated Permit Numbers: 18287, PAL7, PSDTX730M3, and O1229

Dear Ms. Otto:

The Executive Director of the Texas Commission on Environmental Quality (TCEQ) has made a final decision to approve ExxonMobil Corporation's (Exxon's) above-referenced Alternate Means of Control (AMOC) Plan for changes to operational parameters and compliance limits of Flare 26 in order to meet the revised requirements of 40 CFR 63 Subpart CC (MACT CC) at the Baytown Refinery (BTRF). This AMOC proposes to use those same parameters to comply with applicable conditions of 30 Texas Administrative Code (TAC) Chapter 115, Subchapter B, Division 2, § 115.122, which requires 90% destruction rate effectiveness (DRE).

We understand that the calculations for the new federal standard require that when the flare has a low Btu waste stream or low flow (which occurs during some MSS), supplemental natural gas must be added. We also understand Exxon is requesting authorization to modify the flare system by installing a new 52 inch outlet gas-assisted flare tip to improve the combustion efficiency (Permit Amendment Project No. 270002). Based on performance testing on the new flare tip (98+% DRE), Exxon is proposing new limits for the flare of tip velocity (Vtip) maximum of 361 ft/s and the combustion zone net heating value (NHVcz) of 270 Btu/scf.

During the required public comment period, no comments were received. The Flare 26 AMOC Plan No. 99 provisions are enclosed.

The TCEQ has been delegated authority to enforce the above cited standards and is authorized to approve this AMOC. You are reminded that approval of any AMOC shall not abrogate the Executive Director or Administrator's authority under the Act or in any way prohibit later canceling the AMOC.

You are reminded per §115.913(c) that all representations with regard to this AMOC application and Plan become conditions upon which the AMOC is approved and varying from these representations is not allowed if the change will cause a change in the method of control of emissions, the character of the

Ms. Diane Otto

Re: Permit Numbers: 18287, PAL7, PSDTX730M3, and O1229

emissions, result in an increase in the discharge of the various emissions, emission limits, control requirements, monitoring, testing, reporting, or recordkeeping requirements.

Please note you have an opportunity to appeal the Executive Director's determination on the AMOC Plan to the commission within 15 days from the date of receipt of this letter under § 115.914(7). Also, under § 115.914(8), the Environmental Protection Agency (EPA) has 45 days from the date of the TCEQ's final approval of the AMOC Plan to inform the Air Permits Division that it disapproves the AMOC Plan. Following § 115.914(9)-(11), the AMOC plan will become effective with the latter of either EPA acceptance of, or the Commission's issuance of the AMOC plan. Once effective, the AMOC becomes part of the State Implementation Plan.

This AMOC approval may supersede certain requirements or representations in Permit Nos. 18287, PAL7, and PSDTX730M3. To ensure effective and consistent enforceability, we request that Exxon incorporate this AMOC into the permits through submittal of additional information during the pending amendment review (Project No. 270002), and no later than 90 days after this approval.

This approval may also change applicable requirements for the site, which are identified in the site operating permit (SOP) O1229. The TCEQ recommends the submittal of a SOP administrative revision if any changes are necessary. Changes meeting the criteria for an administrative revision can be operated before issuance of the revision if a complete application is submitted to the TCEQ and this information is maintained with the SOP records at the site.

If you need further information or have any questions, please contact Ms. Anne Inman, P.E. at (512) 239-1276 or write to the Texas Commission on Environmental Quality, Office of Air, Air Permits Division, MC-163, P.O. Box 13087, Austin, Texas 78711-3087.

This action is taken under authority delegated by the Executive Director of the TCEQ.

Sincerely,

Michael Wilson, P.E., Director
Air Permits Division
Office of Air
Texas Commission on Environmental Quality

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Alternative Method of Compliance (AMOC) Plan, AMOC No.: AMOC-99
ExxonMobil Corporation, Baytown Refinery
Flexicoker Unit Flare 26 Gas-Assisted Burner Tip
Baytown, Harris County
Regulated Entity Number: 102579307

- A. This AMOC Plan Authorization shall apply at the ExxonMobil Baytown Refinery (Exxon BTRF) Flexicoker Unit located in Baytown, Harris County. It is identified by Regulated Entity Number RN102579307 and is subject to Title 30 Texas Administrative Code (TAC) Section 115.910 (§ 115.910). The gas-assisted burner on Flare 26 is used during routine operations, planned maintenance, start-ups and shut-downs (MSS) as well as unplanned emergency and upset situations. This plan authorizes alternative monitoring for flare combustion zone net heating value (NHVcz) and an alternative limit for the flare tip exit velocity (Vtip) based on the 40 CFR 63 Subpart CC.
- B. A copy of the AMOC application and the AMOC Plan provisions must be kept on-site or at a centralized location and made available at the request of personnel from the TCEQ or any pollution control agency with jurisdiction. The AMOC application is defined by the application received November 9, 2017.
- C. This authorization is granted under § 115.910 for emissions sources regulated by 30 TAC Chapter 115, Subchapter B: General Volatile Organic Compound Sources, Division 2: Vent Gas Control.

This AMOC shall apply in lieu of the requirements §§ 115.122(a)(1)-(2) and 115.126, as applicable. Compliance with this AMOC is independent of Exxon BTRF's obligation to comply with all other applicable requirements of 30 TAC Chapter 115, TCEQ permits and applicable state and federal law. The monitoring and testing requirements of 30 TAC Chapter 115 shall continue to apply.

Compliance with the requirements of this plan does not assure compliance with requirements of an applicable New Source Performance Standard, applicable National Emission Standard for Hazardous Air Pollutants, or an Alternative Means of Emission Limitation (AMEL), and does not constitute approval of alternative standards for these regulations. If an AMEL is granted by the U.S. Environmental Protection Agency (EPA), Exxon BTRF shall comply with the most stringent requirements. Exxon BTRF shall incorporate any AMEL or AMOC by revision to Permit No. 18287 within 90 days if any changes are needed for consistency.

- D. In accordance with 30 TAC § 115.913(c), all representations submitted for this plan, as well as the provisions listed here, become conditions upon which this AMOC Plan is issued. It is unlawful to vary from the emission limits, control requirements, monitoring, testing, reporting or recordkeeping requirements of this Plan.
- E. The gas-assist burner on Flare 26 (identified as EPN FL26), authorized under Permit Nos. 18287, PAL7, and PSDTX730M3, is subject to this AMOC plan.

During normal operations, MSS, as well as unplanned emergency and upset situations, Flare 26 will be operated such that the requirements in paragraph F are met.

Operations of the gas-assist burner will achieve a reduction in emissions at least equivalent to the reduction in emissions being controlled by a steam-assisted, air-assisted, or non-assisted flare complying with the requirements of §§ 115.122(a)(1)-(2), 40 CFR 63.11(b), or 40 CFR 60.18(b). This burner shall comply with the conditions of this Plan.

F. The gas-assist burner must be designed and operated such that the following are met:

1. Operating Requirements: The net heating value of the flare vent gas combustion zone (NHV_{cz}) is greater than or equal to 270 British thermal units per standard cubic foot (Btu/scf) and exit tip velocity (V_{tip}) is less than or equal to 361 feet per second (ft/sec).
 - a. The owner or operator must demonstrate compliance with the NHV_{cz} metric by continuously complying with a 15-minute block average. The operator must calculate and monitor for the NHV_{cz} according to the following as listed in §63.670(m)(1) modified for assist gas:

$$NHV_{cz} = \frac{Q_{vg} \times NHV_{vg} + Q_{ag} \times NHV_{ag}}{(Q_{vg} + Q_{ag})}$$

Where:

NHV_{cz} = Net heating value of combustion zone gas (Btu/scf).
 NHV_{vg} = Net heating value of flare vent gas (Btu/scf).
 NHV_{ag} = Net heating value of assist gas (Btu/scf).
 Q_{vg} = Vent gas flow rate (scf/hr).
 Q_{ag} = Assist gas flow rate (scf/hr).

- b. The operator shall install, operate, calibrate and maintain a monitoring system capable of continuously measuring flare vent gas volumetric flow rate (Q_{vg}).
 - i. The flow rate monitoring system must be able to correct for the temperature and pressure of the system and output parameters in standard conditions (i.e., a temperature of 20 degrees C (68 ° F) and a pressure of 1 atmosphere).
 - ii. Mass flow monitors may be used for determining volumetric flow rate of flare vent gas provided the molecular weight of the flare vent gas is determined using compositional analysis so that the mass flow rate can be converted to volumetric flow at standard conditions using the following equation:

$$Q_{vol} = \frac{Q_{mass} \times 385.3}{MW_t}$$

Where: Q_{vol} = volumetric flow rate in scf per second (scf/s).
 Q_{mass} = mass flow rate in pounds per second (lb/s)
 385.3 = conversion factor scf per pound-mole
 MW_t = molecular weight of the gas at the flow monitoring location, pounds per pound-mole

- c. The operator shall install, operate, calibrate and maintain a monitoring system capable for measuring, calculating and recording the tip velocity (V_{tip}). The V_{tip} shall be determined by the following equation:

$$V_{tip} = \frac{Q_{cum}}{Area \times 900}$$

Where:

Vtip = flare tip velocity (ft/sec).

Qcum = Cumulative volumetric flow of vent gas over 15-minute block average (standard cubic feet).

Area = unobstructed area of the flare tip (ft²).

900 = conversion factor (sec/15-min block average).

- d. The operator shall install, operate, calibrate and maintain a monitoring system capable of continuously measuring (*i.e.*, at least once every 15-minutes), calculating, and recording the individual component concentrations present in the flare vent gas or install, operate, calibrate and maintain a monitoring system capable of continuously measuring, calculating and recording *NH₃V_g* (in Btu/scf). The components are specified in Appendix Table 1.
 - e. For each measurement produced by the monitoring system, the operator shall determine the 15-minute block average as the arithmetic average of all measurements made by the monitoring system within the 15-minute period.
 - f. The operator must follow the calibration and maintenance procedures according to 40 CFR 63 Subpart CC Table 13 and operate monitoring system per 40 CFR 63.671(a)(4).
2. Pilot Flame Requirements: Flare 26 shall be operated with a flame present at all times when in use.
- The pilot flame must be continuously monitored by a thermocouple or any other equivalent device, such as the video camera required for visible emission monitoring as outlined in 3b below, used to detect the presence of a flame. The time, date and duration of any complete loss of pilot flame must be recorded. Each monitoring device must be maintained or replaced at a frequency in accordance with the manufacturer's specifications.
3. Visible Emission Requirements: When the flare is receiving regulated material, it shall be operated with no visible emissions except for periods not to exceed a total of 5 minutes during any 2 consecutive hours. Visible emission observations must be conducted using either the methods in paragraph (a) of this section or, alternatively, the methods in paragraph (b) of this section.
- a. At least once per day, conduct visible emissions observations using an observation period of 5 minutes using Method 22 at 40 CFR part 60, appendix A-7. If at any time the owner or operator sees visible emissions, even if the minimum required daily visible emission monitoring has been performed, the owner or operator shall immediately begin an observation period of 5 minutes using Method 22 at 40 CFR part 60, appendix A-7. If visible emissions are observed for more than one continuous minute during any 5-minute period, the observation period using Method 22 at 40 CFR part 60, appendix A-7 must be extended to 2 hours or until 5-minutes of visible emissions are observed.
 - b. A video camera that is capable of continuously recording (*i.e.*, at least one frame every 15 seconds with time and date stamps) images of the flare flame and a reasonable distance above the flare flame at an angle suitable for visible emissions observations must be used to demonstrate compliance with this requirement. The owner or operator must provide real-time video surveillance camera output to the control room or other continuously manned location where the video camera images may be viewed at any time.
4. Recordkeeping Requirements: All data must be recorded and maintained for a minimum of five years or for as long as applicable rule subpart(s) specify flare records should be kept, whichever is longer. Records must be maintained onsite and made available upon request by authorized representatives of the executive director, U.S. EPA, and any local air pollution control agency with jurisdiction.

5. Reporting Requirements

- a. The information specified in (b) below should be reported in the timeline specified by the applicable rules for which the gas-assist flare will control emissions.
- b. The owner or operator shall notify the executive director of periods of excess emissions in their Title V Periodic Reports. These periods of excess emissions shall include:
 - i. Each 15-minute block during which there was at least one minute when regulated material was routed to the flare and a complete loss of pilot flame occurred.
 - ii. Periods of visible emissions events that exceed more than 5 minutes in any 2 hour consecutive period.
 - iii. Each 15-minute block period for which an applicable combustion zone operating limit (*NHV_{cz}*) is not met for the gas-assist burner tip when regulated material is being combusted in the flare.
 - iv. Each 15-minute block period for which an applicable flare tip exit velocity limit (*V_{tip}*) is not met for the gas-assist burner tip when regulated material is being combusted in the flare.

APPENDIX Table 1 — Individual Component Properties

Component	Molecular Formula	MW_i (lb/ lb mol)	NHV_i (Btu/scf)	LFL_i (volume %)
Acetylene ⁽¹⁾	C ₂ H ₂	26.04	1,404	2.5
Benzene ⁽²⁾	C ₆ H ₆	78.11	3,591	1.3
1,2- Butadiene ⁽²⁾	C ₄ H ₆	54.09	2,794	2.0
1,3- Butadiene	C ₄ H ₆	54.09	2,690	2.0
iso-Butane ⁽¹⁾	C ₄ H ₁₀	58.12	2,957	1.8
n-Butane ⁽¹⁾	C ₄ H ₁₀	58.12	2,968	1.8

(1) Components to be monitored as specified in condition F.1(d)

(2) Components not required to be monitored as specified in condition F.1(d)

(3) The theoretical NHV for hydrogen is 274 Btu/scf, but for the purposes of this AMOC a NHV of 1,212 Btu/scf shall be used for the NHV calculations to be consistent with EPA practice

APPENDIX 2 — Acronyms and Abbreviations

The AMOC uses multiple acronyms and terms, defined here (please note this list is not exhaustive):

AMEL	Alternative Means of Emission Limitation
AMOC	Alternate Method of Compliance or Control
Btu/scf	British thermal units per standard cubic foot
CAA	Clean Air Act
CBI	confidential business information
CFR	Code of Federal Regulations
EPA	Environmental Protection Agency
EPN	Emission Point Number
Eqn	equation
HAP	hazardous air pollutants
HP	high pressure
LFL	lower flammability limit
LFLcz	lower flammability limit of combustion zone gas
LFLvg	lower flammability limit of flare vent gas
MPGF	multi-point ground flares
MSS	planned maintenance, start-ups and shut-downs
NESHAP	National Emission Standards for Hazardous Air Pollutants
NHV	net heating value
NHVcz	net heating value of combustion zone gas
NHVvg	net heating value of flare vent gas
NSPS	New Source Performance Standards
OAQPS	Office of Air Quality Planning and Standards
TAC	Texas Administrative Code
TCEQ	Texas Commission on Environmental Quality
scf	standard cubic feet
VOC	volatile organic compounds

Appendix A

Acronym List 2929

Acronym List

The following abbreviations or acronyms may be used in this permit:

ACFM	actual cubic feet per minute
AMOC	alternate means of control
ARP	Acid Rain Program
ASTM	American Society of Testing and Materials
B/PA	Beaumont/Port Arthur (nonattainment area)
CAM	Compliance Assurance Monitoring
CD	control device
CEMS	continuous emissions monitoring system
CFR	Code of Federal Regulations
COMS	continuous opacity monitoring system
CVS	closed vent system
D/FW	Dallas/Fort Worth (nonattainment area)
EP	emission point
EPA	U.S. Environmental Protection Agency
EU	emission unit
FCAA Amendments	Federal Clean Air Act Amendments
FOP	federal operating permit
gr/100 scf	grains per 100 standard cubic feet
HAP	hazardous air pollutant
H/G/B	Houston/Galveston/Brazoria (nonattainment area)
H ₂ S	hydrogen sulfide
ID No.	identification number
lb/hr	pound(s) per hour
MACT	Maximum Achievable Control Technology (40 CFR Part 63)
MMBtu/hr	Million British thermal units per hour
NA	nonattainment
N/A	not applicable
NADB	National Allowance Data Base
NESHAP	National Emission Standards for Hazardous Air Pollutants (40 CFR Part 61)
NO _x	nitrogen oxides
NSPS	New Source Performance Standard (40 CFR Part 60)
NSR	New Source Review
ORIS	Office of Regulatory Information Systems
Pb	lead
PBR	Permit By Rule
PEMS	predictive emissions monitoring system
PM	particulate matter
ppmv	parts per million by volume
PRO	process unit
PSD	prevention of significant deterioration
psia	pounds per square inch absolute
SIP	state implementation plan
SO ₂	sulfur dioxide
TCEQ	Texas Commission on Environmental Quality
TSP	total suspended particulate
TVP	true vapor pressure
U.S.C.	United States Code
VOC	volatile organic compound

- (1) Emission point identification - either specific equipment designation or emission point number from plot plan.
- (2) Specific point source name. For fugitive sources, use area name or fugitive source name.
- (3)
- NO_x - nitrogen oxide
 - CO - carbon monoxide
 - SO₂ - sulfur dioxide
 - PM - particulate matter, suspended in the atmosphere, including PM₁₀
 - PM₁₀ - particulate matter equal to or less than 10 microns in diameter. Where PM is not listed, it shall be assumed that no PM greater than 10 microns is emitted.
 - PM_{2.5} - particulate matter equal to or less than 2.5 microns in diameter
 - VOC - volatile organic compounds as defined in Title 30 Texas Administration Code § 101.1
 - H₂S - hydrogen sulfide
 - H₂SO₄ - sulfuric acid
 - NH₃ - ammonia
 - COS - carbonyl sulfide
 - CS₂ - carbon disulfide
- (4) Compliance with annual emission limits (tons per year) is based on a 12 month rolling period.
- (5) Includes Initial and Final MSS Emission Caps
- (6) Emissions limits are for the new cooling tower cell(s) added at Cooling Tower No. 84 (EPN CT84FUG), as represented in the permit amendment application Form PI-1 dated May 31, 2017, as updated.

Texas Commission on Environmental Quality Air Quality Permit

A Flexible Permit Is Hereby Issued To
Exxon Mobil Corporation
Authorizing the Construction and Operation of
Exxon Mobil Baytown Refinery
Located at Baytown, Harris County, Texas
Latitude 29° 45' 24" Longitude -94° 59' 31"

Permits: 18287, PSDTX730M4, and PAL7

Revision Date: August 24, 2022

Expiration Date: October 30, 2016

A handwritten signature in black ink, appearing to read "T. J. Baker".

For the Commission

1. **Facilities** covered by this permit shall be constructed and operated as specified in the application for the permit. All representations regarding construction plans and operation procedures contained in the permit application shall be conditions upon which the permit is issued. Variations from these representations shall be unlawful unless the permit holder first makes application to the Texas Commission on Environmental Quality (commission) Executive Director to amend this permit in that regard and such amendment is approved. It shall be unlawful for any person to vary from such representation or flexible permit provision if the change will cause a change in the method of control of emissions, the character of the emissions, will relax emission controls or will result in a significant increase in emissions, unless application is made to the executive director to amend the flexible permit in that regard and such amendment is approved by the executive director. [Title 30 Texas Administrative Code (TAC) Sections 116.715(c)(8) and 116.721 (30 TAC § 116.721)] ¹
2. **Voiding of Permit.** A permit or permit amendment is automatically void if the holder fails to begin construction within 18 months of the date of issuance, discontinues construction for more than 18 months prior to completion, or fails to complete construction within a reasonable time. Upon request, the executive director may grant an 18-month extension. Before the extension is granted the permit may be subject to revision based on best available control technology, lowest achievable emission rate, and netting or offsets as applicable. One additional extension of up to 18 months may be granted if the permit holder demonstrates that emissions from the facility will comply with all rules and regulations of the commission, the intent of the Texas Clean Air Act (TCAA), including protection of the public's health and physical property; and (b)(1) the permit holder is a party to litigation not of the permit holder's initiation regarding the issuance of the permit; or (b)(2) the permit holder has spent, or committed to spend, at least 10 percent of the estimated total cost of the project up to a maximum of \$5 million. A permit holder granted an extension under subsection (b)(1) of this section may receive one subsequent extension if the permit holder meets the conditions of subsection (b)(2) of this section. [30 TAC § 116.120]
3. **Construction Progress.** Start of construction, construction interruptions exceeding 45 days, and completion of construction shall be reported to the appropriate regional office of the commission not later than 15 working days after occurrence of the event. [30 TAC § 116.715(c)(2)]
4. **Start-up Notification.** The appropriate air program regional office shall be notified prior to the commencement of operations of the facilities authorized by the permit in such a manner that a representative of the commission may be present. The permit holder shall provide a separate notification for the commencement of operations for each unit of phased construction, which may involve a series of units commencing operations at different times. Prior to operation of the facilities authorized by the permit, the permit holder shall identify the source or sources of allowances to be utilized for compliance with Chapter 101, Subchapter H, Division 3 of this title (relating to Mass Emissions Cap and Trade Program). [30 TAC § 116.715(c)(3)]
5. **Sampling Requirements.** If sampling is required, the flexible permit holder shall contact the commission's Office of Compliance and Enforcement prior to sampling to obtain the proper data forms and procedures. All sampling and testing procedures must be approved by the executive director and coordinated with the regional representatives of the commission. The flexible permit holder is also responsible for providing sampling facilities and conducting the sampling operations or contracting with an independent sampling consultant. [30 TAC § 116.715(c)(4)]
6. **Equivalency of Methods.** The permit holder must demonstrate or otherwise justify the equivalency of emission control methods, sampling or other emission testing methods, and monitoring methods proposed as alternatives to

methods indicated in the conditions of the permit. Alternative methods shall be applied for in writing and must be reviewed and approved by the executive director prior to their use in fulfilling any requirements of the permit. [30 TAC § 116.715(c)(5)]

7. **Recordkeeping.** A copy of the flexible permit along with information and data sufficient to demonstrate continuous compliance with the emission caps and individual emission limitations contained in the flexible permit shall be maintained in a file at the plant site and made available at the request of personnel from the commission or any air pollution control program having jurisdiction. This information shall include, but is not limited to, emission cap and individual emission limitation calculations based on a 12-month rolling basis; emission cap and individual emission limitation calculations corresponding to any short term emission limitation; production records and operating hours; and additional recordkeeping requirements specified in special conditions attached to the flexible permit. Information in the file shall be retained for at least two years following the date that the information or data is obtained. For facilities that normally operate unattended, this information shall be maintained at the nearest staffed location within Texas specified by the permit holder in the permit application. [30 TAC § 116.715(c)(6)]
8. **Maximum Allowable Emission Rates**A flexible permit covers only those sources of emissions and those air contaminants listed in the table entitled “Emission Sources, Emissions Caps and Individual Emission Limitations” in the flexible permit. Each permitted facility, group of facilities or account is limited to the emission limits and other conditions specified in the table in the flexible permit. [30 TAC § 116.715(c)(7)] ¹
9. **Emission Cap Readjustment.** If a schedule to install additional controls is included in the flexible permit and a facility subject to such a schedule is taken out of service, the emission cap contained in the flexible permit will be readjusted for the period the unit is out of service to a level as if no schedule had been established. Unless a special condition specifies the method of readjustment of the emission cap, a permit alteration shall be obtained. [30 TAC § 116.715(c)(9)]
10. **Maintenance of Emission Control.** The permitted facilities shall not be operated unless all air pollution emission capture and abatement equipment is maintained in good working order and operating properly during normal facility operations. The flexible permit holder shall provide notification in accordance with 30 TAC §101.201, 101.211, and 101.221 of this title (relating to Emissions Event Reporting and Recordkeeping Requirements; Scheduled Maintenance, Startup, and Shutdown Reporting and Recordkeeping Requirements; and Operational Requirements). [30 TAC § 116.715(c)]
11. **Compliance with Rules.** Acceptance of a flexible permit by an applicant constitutes an acknowledgment and agreement that the flexible permit holder will comply with all rules and orders of the commission issued in conformity with the TCAA and the conditions precedent to the granting of the permit. If more than one state or federal rule or regulation or permit condition is applicable, the most stringent limit or condition shall govern and be the standard by which compliance shall be demonstrated. Acceptance includes consent to the entrance of commission employees and agents into the permitted premises at reasonable times to investigate conditions relating to the emission or concentration of air contaminants, including compliance with the flexible permit. [30 TAC § 116.715(c)(11)]
12. **This** permit may not be transferred, assigned, or conveyed by the holder except as provided by rule. [30 TAC § 116.110(e)]
13. **There** may be additional special conditions attached to a permit upon issuance or modification of the permit. Such conditions in a permit may be more restrictive than the requirements of Title 30 of the Texas Administrative Code. [30 TAC § 116.715(d)]
14. **Emissions** from this facility must not cause or contribute to “air pollution” as defined in Texas Health and Safety Code (THSC) §382.003(3) or violate THSC § 382.085. If the executive director determines that such a condition or violation occurs, the holder shall implement additional abatement measures as necessary to control or prevent the condition or violation.
15. **The** permit holder shall comply with all the requirements of this permit. Emissions that exceed the limits of this permit are not authorized and are violations of this permit. ¹

¹ Please be advised that the requirements of this provision of the general conditions may not be applicable to greenhouse gas emissions.

Common Acronyms in Air Permits

°C = Temperature in degrees Celsius	GLCmax = maximum (predicted) ground-level concentration
°F = Temperature in degrees Fahrenheit	gpm = gallon per minute
°K = Temperature in degrees Kelvin	gr/1000scf = grain per 1000 standard cubic feet
µg = microgram	gr/dscf = grain per dry standard cubic feet
µg/m ³ = microgram per cubic meter	H ₂ CO = formaldehyde
acfm = actual cubic feet per minute	H ₂ S = hydrogen sulfide
AMOC = alternate means of control	H ₂ SO ₄ = sulfuric acid
AOS = alternative operating scenario	HAP = hazardous air pollutant as listed in § 112(b) of the Federal Clean Air Act or Title 40 Code of Federal Regulations Part 63, Subpart C
AP-42 = Air Pollutant Emission Factors, 5th edition	HC = hydrocarbons
APD = Air Permits Division	HCl = hydrochloric acid, hydrogen chloride
API = American Petroleum Institute	Hg = mercury
APWL = air pollutant watch list	HGB = Houston/Galveston/Brazoria
BPA = Beaumont/ Port Arthur	hp = horsepower
BACT = best available control technology	hr = hour
BAE = baseline actual emissions	IFR = internal floating roof tank
bbl = barrel	in H ₂ O = inches of water
bbl/day = barrel per day	in Hg = inches of mercury
bhp = brake horsepower	IR = infrared
BMP = best management practices	ISC3 = Industrial Source Complex, a dispersion model
Btu = British thermal unit	ISCST3 = Industrial Source Complex Short-Term, a dispersion model
Btu/scf = British thermal unit per standard cubic foot or feet	K = Kelvin; extension of the degree Celsius scaled-down to absolute zero
CAA = Clean Air Act	LACT = lease automatic custody transfer
CAM = compliance-assurance monitoring	LAER = lowest achievable emission rate
CEMS = continuous emissions monitoring systems	lb = pound
cfm = cubic feet (per) minute	hp = horsepower
CFR = Code of Federal Regulations	hr = hour lb/day = pound per day
CN = customer ID number	lb/hr = pound per hour
CNG = compressed natural gas	lb/MMBtu = pound per million British thermal units
CO = carbon monoxide	LDAR = Leak Detection and Repair (Requirements)
COMS = continuous opacity monitoring system	LNG = liquefied natural gas
CPMS = continuous parametric monitoring system	LPG = liquefied petroleum gas
DFW = Dallas/ Fort Worth (Metroplex)	LT/D = long ton per day
DE = destruction efficiency	m = meter
DRE = destruction and removal efficiency	m ³ = cubic meter
dscf = dry standard cubic foot or feet	m/sec = meters per second
dscfm = dry standard cubic foot or feet per minute	MACT = maximum achievable control technology
ED = (TCEQ) Executive Director	MAERT = Maximum Allowable Emission Rate Table
EF = emissions factor	MERA = Modeling and Effects Review Applicability
EFR = external floating roof tank	mg = milligram
EGU = electric generating unit	mg/g = milligram per gram
EI = Emissions Inventory	mL = milliliter
ELP = El Paso	MMBtu = million British thermal units
EPA = (United States) Environmental Protection Agency	MMBtu/hr = million British thermal units per hour
EPN = emission point number	MSDS = material safety data sheet
ESL = effects screening level	MSS = maintenance, startup, and shutdown
ESP = electrostatic precipitator	MW = megawatt
FCAA = Federal Clean Air Act	NAAQS = National Ambient Air Quality Standards
FCCU = fluid catalytic cracking unit	NESHAP = National Emission Standards for Hazardous Air Pollutants
FID = flame ionization detector	NGL = natural gas liquids
FIN = facility identification number	NNSR = nonattainment new source review
ft = foot or feet	NO _x = total oxides of nitrogen
ft/sec = foot or feet per second	
g = gram	
gal/wk = gallon per week	
gal/yr = gallon per year	
GLC = ground level concentration	

NSPS = New Source Performance Standards
 PAL = plant-wide applicability limit
 PBR = Permit(s) by Rule
 PCP = pollution control project
 PEMS = predictive emission monitoring system
 PID = photo ionization detector
 PM = periodic monitoring
 PM = total particulate matter, suspended in the atmosphere, including PM₁₀ and PM_{2.5}, as represented
 PM_{2.5} = particulate matter equal to or less than 2.5 microns in diameter
 PM₁₀ = total particulate matter equal to or less than 10 microns in diameter, including PM_{2.5}, as represented
 POC = products of combustion
 ppb = parts per billion
 ppm = parts per million
 ppmv = parts per million (by) volume
 psia = pounds (per) square inch, absolute
 psig = pounds (per) square inch, gage
 PTE = potential to emit
 RA = relative accuracy
 RATA = relative accuracy test audit
 RM = reference method
 RVP = Reid vapor pressure
 scf = standard cubic foot or feet
 scfm = standard cubic foot or feet (per) minute
 SCR = selective catalytic reduction
 SIL = significant impact levels
 SNCR = selective non-catalytic reduction
 SO₂ = sulfur dioxide
 SOCM = synthetic organic chemical manufacturing industry
 SRU = sulfur recovery unit
 TAC = Texas Administrative Code
 TCAA = Texas Clean Air Act
 TCEQ = Texas Commission on Environmental Quality
 TD = Toxicology Division
 TLV = threshold limit value
 TMDL = total maximum daily load
 tpd = tons per day
 tpy = tons per year
 TVP = true vapor pressure
 VOC = volatile organic compounds as defined in Title 30 Texas Administrative Code § 101.1
 VRU = vapor recovery unit or system

Special Conditions

Flexible Permit Numbers 18287, PSDTX730M4, and PAL7

Federal Applicability

1. These facilities shall comply with all applicable requirements of the U.S. Environmental Protection Agency (EPA) regulations on Standards of Performance for New Stationary Sources promulgated in Title 40 Code of Federal Regulations Part 60 (40 CFR Part 60): **(08/22)**
 - A. Subpart A, General Provisions.
 - B. Subpart Db, Standards of Performance for Industrial-Commercial-Institutional Steam Generating Units.
 - C. Subpart J, Standards of Performance for Petroleum Refineries.
 - D. Subpart Ja, Standards of Performance for Petroleum Refineries for Which Construction, Reconstruction, or Modification Commenced After May 14, 2007.
2. These facilities shall comply with all applicable requirements of the U.S. Environmental Protection Agency (EPA) regulations on National Emission Standards for Hazardous Air Pollutants for Source Categories in 40 CFR Part 63:
 - A. Subpart A, General Provisions.
 - B. Subpart CC, National Emission Standards for Hazardous Air Pollutants from Petroleum Refineries.
 - C. Subpart DDDDD, National Emission Standards for Hazardous Air Pollutants for Major Sources: Industrial, Commercial, and Institutional Boilers and Process Heaters.

Emission Caps and Individual Emission Limitations

3. This permit covers only those emissions from those points listed in the attached table entitled "Emission Sources - Emission Caps," and the facilities covered by this permit are authorized to emit to the emission rate limits and other conditions specified in this permit. **(02/02)**

This permit also authorizes the emissions from the planned maintenance, startup, and shutdown (planned MSS) activities as represented in the permit amendment application dated January 5, 2007, from those points listed in the attached table entitled "Emission Sources - Maximum Allowable Emission Rates," and the facilities covered by this permit are authorized to emit subject to the emission rate limits on the maximum allowable emission rates table (MAERT) and other requirements specified in Special Condition (SC) Numbers 48 through 65. **(6/10)**
4. This flexible permit establishes emission caps for the total emissions from all sources listed in the Emission Sources - Emission Caps table.
5. Opacity of emissions from the Furnace (Emission Point No. [EPN] LXU1 B-5), the GTG 37/WHB-67 Unit (EPN BH6B67), Furnace F-101 (EPN HU6BF101), Furnace F 201 (EPN HU6AF201) and Furnace F-901 (EPNHU10F901) must not exceed 5 percent averaged over a six-minute period, except for those periods described in Title 30 Texas Administrative Code § 111.111(a)(1)(E) [30 TAC § 111.111(a)(1)(E)]. **(06/08)**

Special Conditions

Permit Numbers 18287, PSDTX730M4, and PAL7

Page 2

6. Opacity of emissions from the cogeneration trains (a cogeneration train is a gas turbine generator combined with a waste heat boiler) must not exceed 15 percent averaged over a six-minute period, except for those periods described in 30 TAC § 111.111(a)(1)(E).
7. Coke handling and transport at the site shall meet the following requirements:

Water and/or chemicals shall be used on coke storage and transfer operations, as necessary, to minimize the emissions of particulate matter (PM). **(5/02)**

Coke loaded into railcars or trucks shall be sprayed with water and/or chemical dust suppressants, as necessary, and/or fully covered prior to transport, to minimize emissions of PM. **(05/02)**

Road-generated PM emissions from coke operations shall be minimized, as necessary, by using water and/or chemical dust suppressants. **(05/02)**
8. Delayed Coker Unit (DCU) operations shall be limited as follows: **(1/16)**

Prior to depressuring a drum to atmosphere, the drum shall be routed to a closed blowdown system which recovers and directs the gas flows to the fuel gas or flare system.

No more than two coke drums may be depressured to the atmosphere, opened and drilled out at the same time.

The coke drums shall not be depressured and drained to atmosphere until the drum reaches a top or blowdown pressure of 15 psig or less for 5 minutes.

No more than 1400 drum cycles (i.e., drum depressurizations to atmosphere including unheadings/openings) may occur in a year.
9. The DCU water handling may be open with water flow limited as represented in the confidential application for the amendment issued January 27, 2016. Emissions shall be estimated based on the number of cycles per day and the representation in the permit application and updated monthly. **(1/16)**
10. Non-fugitive emissions from relief valves, safety valves, or rupture discs of gases containing volatile organic compounds (VOC) at a concentration of greater than 1 percent are not authorized by this permit. Any releases directly to atmosphere from relief valves, safety valves, or rupture discs of gases containing VOC at a concentration greater than 1 weight percent are not consistent with good practice for minimizing emissions with the exception of those listed Emission Sources - Emission Caps table. **(10/06)**
11. The Process Vent identified as EPN MEK13V, Blanket Gas Vent, shall be routed to an oil absorber or equivalent control device with a removal efficiency of at least 80 percent.

SRU Conditions

12. The holder of this permit shall route or reroute all sulfur pit emissions so that they are eliminated, controlled, or included and monitored as part of the emissions subject to Subpart J or Ja emission limitations. **(08/22)**

In an unplanned shutdown of any Claus Train, existing oxygen enrichment facilities will be utilized as soon as practical and as necessary to minimize acid gas flaring.

In addition, there shall be three days of holdup capacity maintained for sour water as represented in the November 23, 1998, and October 13, 2000 letters to the Texas Commission on Environmental Quality (TCEQ). This capacity shall be used for sour water storage when necessary to avoid flaring of acid gases due to reduced SCU 2 complex capacity. It shall be restored as soon as practical after the return of the SCU 2 complex to normal operation. This special condition does not permit upset/malfunction emissions.

The TGCU vent shall have a CEMS and shall not exceed 10 parts per million by volume (ppmv) hydrogen sulfide, calculated as ppm SO₂ by volume (dry basis) at zero percent excess air, on a rolling 12-hour period average basis. **(06/10)**

Periodic maintenance may be required for properly designed and operated sulfur pit emission control systems and/or equipment. ExxonMobil will take all reasonable measures to minimize emissions while such periodic maintenance is being performed.

The permit holder shall maintain plans for enhanced maintenance and operation of the SRU, the control devices, and the appropriate upstream process units. Those plans, collectively, shall be termed the Preventative Maintenance and Operations Plans ("PMO Plans"). The PMO Plans shall be a compilation of the permit holder's approaches for exercising good air pollution control practices and for minimizing SO₂ emissions from sulfur processing and upstream process units. The PMO Plans shall include, but shall not be limited to, sulfur shedding procedures, startup and shutdown procedures of the SRU, control devices and upstream process units, emergency procedures and schedules to coordinate maintenance turnarounds of the Claus trains and any control device to coincide with scheduled turnarounds of major upstream process units. The permit holder shall implement the PMO Plans at all times, including periods of startup, shutdown and malfunction, consistent with the requirements imposed by 40 CFR §60.11 (d). Changes may be made to the PMO Plans as needed and updated PMO Plans shall be kept on site. PMO Plans shall be made available to representatives of the TCEQ upon request.

The permit holder shall comply with the Root Cause Failure Analysis requirements for Tail Gas Incidents as follows:

- A. Tail gas is defined as: exhaust gas from the Claus trains and/or tail gas cleanup units.
- B. A tail gas incident is defined as: tail gas combusted in a flare and results in 500 pounds or more of SO₂ emissions in any 24 hour period; or (2) tail gas combusted in a thermal incinerator and results in excess emissions of 500 pounds or more of SO₂ in any 24-hour period. Only those time periods which are in excess of a SO₂ concentration of 250 ppm (rolling 12-hour average) shall be used to determine the amount of excess SO₂ emissions from the incinerator.

The permit holder shall investigate each tail gas incident and record the results of the investigation within 45 days of knowledge of the incident. The investigation shall include (i) date and time the tail gas incident started and ended; (ii) an estimate of the quantity of the SO₂ emissions, including supporting calculations; (iii) steps taken to limit the duration and/or quantity of SO₂ emissions; (iv) an analysis of the root cause of the incident; and (v) an analysis of corrective actions, if any, that are available to reduce the likelihood of a recurrence of the incident from the same root cause. (vi) The facility shall document any corrective actions taken within 45 days following knowledge of the

incident, and document the schedule for completion of any other corrective actions taken within 45 days following knowledge of the incident, and document the schedule for completion of any other corrective actions proposed to be completed. Records of such investigations and corrective actions shall document any corrective actions taken within 45 days following knowledge of the incident, and document the schedule for completion of any other corrective actions proposed to be completed. Records of such investigations and corrective actions shall be kept on site.

Flares

13. No later than January 30, 2019 flares 3, 4, 5, 6, 11, 14, 15, 17, 18, 19, 20, 21, 22, 25, 27 and 29 shall be designed and operated in accordance with the following requirements. Unless otherwise specified, all requirements of this condition shall apply during periods that regulated material may be vented to the flare. **(03/19)**
 - A. The flare system(s) shall be designed such that the combined vent gas, assist air, and/or total steam to each flare meets the 40 CFR § 63.670 specifications for minimum combustion zone net heating value, the minimum dilution parameter net heating value, and maximum tip velocity at all times that emissions may be directed to the flare for more than 15 minutes.

Flared gas actual exit velocity, vent gas net heating value, and flared gas combustion zone net heating value shall be determined in accordance with 40 CFR 63.670(k), 63.670(l), and 63.670(m) on a 15 minute block average and recorded at least once every 15 minutes.

If perimeter assist air is used, the dilution parameter net heating value shall be determined in accordance with 40 CFR 63.670(n) on a 15 minute block average recorded at least once every fifteen minutes.
 - B. The flare(s) shall be operated with pilot flame(s) present at all times vent gas may be directed to the flare(s). The pilot flame(s) shall be continuously monitored by a thermocouple, infrared monitor, or ultraviolet monitor. The time, date, and duration of any loss of pilot flame shall be recorded. Each monitoring device shall be accurate to and shall be calibrated at a frequency in accordance with, the manufacturer's specifications.
 - C. Flares shall be operated with no visible emissions except periods not to exceed a total of five minutes during any two consecutive hours, demonstrated and recorded per the requirements of 63.670(h).
 - D. The permit holder shall install flow monitors and calorimeters that continuously measure, calculate and record the total volumetric vent stream flow rate (including waste gas, purge gas, supplemental gas, and sweep gas) and Btu content in the flare header or headers to the flare. The flow monitor sensor and analyzer sample points shall be installed in the vent stream such that the total vent stream to the flare is measured and analyzed.

If one or more gas streams that combine to comprise the total flare vent gas flow are monitored separately for net heating value and flow, the 15-minute block average net heating value shall be determined separately for each measurement location and a flow-weighted average of the gas stream net heating values shall be used to determine the 15-minute block average net heating value of the cumulative flare vent gas.

If assist air or assist steam is used, the owner or operator shall install, operate, calibrate, and maintain a monitoring system capable of continuously measuring, calculating, and recording the total volumetric flow rate of assist air and/or assist steam used with the flare.

If pre-mix assist air and/or perimeter assist are used, the owner or operator shall install, operate, calibrate, and maintain a monitoring system capable of separately measuring, calculating, and recording the volumetric flow rate of pre-mix assist air and/or perimeter assist air used with the flare. Continuously monitoring fan speed or power and using fan curves is an acceptable method for continuously monitoring assist air flow rates.

Ambient air provided to steam assisted flares by a steam induction ring is exempt from the perimeter assist monitoring requirements.

The volumetric flow of assist air provided to steam assisted flares through steam induction tubes shall be determined as specified by the vendor.

The monitors shall be calibrated or have a calibration check performed on an annual basis and as specified in Table 13 of the appendix to 40 CFR 63, Part CC to meet the following accuracy specifications: the vent flow monitor shall be ± 20 percent of flow rate at velocities ranging from 0.03 to 0.3 meters per second (0.1 to 1 feet per second) ± 5 percent of flow rate at velocities greater than 0.3 meters per second (1 feet per second), all other gas flow monitors shall be ± 5 percent over the normal range of flow measured or 280 liters per minute (10 cubic feet per minute) whichever is greater, temperature monitor shall be ± 1 percent over the normal range of temperature measured, expressed in degrees Celsius (C), or 2.8 degrees C, whichever is greater, and pressure monitor shall be ± 5 percent over the normal operating range or 0.12 kilopascals (0.5 inches of water column), whichever is greater. For purposes of this permit, a calibration check means, at a minimum, using a second device or method to verify that the monitor is accurate as specified in the permit.

Calorimeters shall have an accuracy of at least $\pm 2\%$ of span and be calibrated, installed, operated, and maintained in accordance with manufacturer recommendations and as specified in Table 13 of the appendix to 40 CFR 63, Part CC, to continuously measure and record the net heating value of the vent gas sent to the flare, in British thermal units/standard cubic foot of the gas.

- E. Quality assured (or valid) data must be generated during periods that flare is operating. Loss of valid data due to periods of monitor break down, out-of-control operation (producing inaccurate data), repair, maintenance, or calibration may be exempted provided it does not exceed 5 percent of the time (in minutes) that the flare operated over the previous rolling 12 month period. The measurements missed shall be estimated using engineering judgment and the methods used recorded.
 - F. Hourly mass emission rates of NO_x and CO shall be determined and recorded using the net heating value of the gas combusted in the flare calculated per Special Condition 13.D and the emission factors specified in Special Condition 25.
14. Flare 26 (EPN: FL26) is used during routine operations, planned maintenance, start-ups and shut-downs (MSS) as well as unplanned emergency and upset situations. This special condition incorporates the requirements of the approved Alternative Means of Control (AMOC) Plan AMOC-99, issued on May 25, 2018, and the approved Alternative Means of Emission Limitation (AMEL), effective September 17, 2018. A copy of AMOC-99 and the AMEL for Flare 26 shall be maintained on site and made available upon request by authorized representatives of the executive director, U.S. EPA, and any local air pollution control agency with jurisdiction. **(03/19)**

The gas-assist burner on Flare 26 must be designed and operated such that the following are met:

- A. Operating Requirements: The net heating value of the flare vent gas combustion zone (NHVcz) is greater than or equal to 270 British thermal units per standard cubic foot (Btu/scf) and exit tip velocity (Vtip) is less than or equal to 361 feet per second (ft/sec).
- (1) The owner or operator must demonstrate compliance with the NHVcz metric by continuously complying with a 15-minute block average. The operator must calculate and monitor for the NHVcz according to the following as listed in §63.670(m)(1) modified for assist gas:

$$NHV_{cz} = \frac{Qvg \times NHVvg + Qag \times NHVag}{(Qvg + Qag)}$$

Where:

NHVcz = Net heating value of combustion zone gas (Btu/scf).

NHVvg = Net heating value of flare vent gas (Btu/scf).

NHVag = Net heating value of assist gas (Btu/scf).

Qvg = Vent gas flow rate (scf/hr).

Qag = Assist gas flow rate (scf/hr).

- (2) The operator shall install, operate, calibrate and maintain a monitoring system capable of continuously measuring flare vent gas volumetric flow rate (Qvg).
- (a) The flow rate monitoring system must be able to correct for the temperature and pressure of the system and output parameters in standard conditions (i.e., a temperature of 20 degrees C (68°F) and a pressure of 1 atmosphere).
- (b) Mass flow monitors may be used for determining volumetric flow rate of flare vent gas provided the molecular weight of the flare vent gas is determined using compositional analysis so that the mass flow rate can be converted to volumetric flow at standard conditions using the following equation:

$$Qvol = \frac{Qmass \times 385.3}{MWt}$$

Where:

Qvol = volumetric flow rate in scf per second (scf/s).

Qmass = mass flow rate in pounds per second (lb/s)

385.3 = conversion factor scf per pound-mole

MWt = molecular weight of the gas at the flow monitoring location, pounds per pound mole

- (3) The operator shall install, operate, calibrate and maintain a monitoring system capable for measuring, calculating and recording the tip velocity (Vtip). The Vtip shall be determined by the following equation:

$$Vtip = \frac{Qcum}{Area \times 900}$$

Where:

V_{tip} = flare tip velocity (ft/sec).

Q_{cum} = Cumulative volumetric flow of vent gas over 15-minute block average (standard cubic feet).

Area = unobstructed area of the flare tip (ft²).

900 = conversion factor (sec/15-min block average).

- (4) The operator shall install, operate, calibrate and maintain a monitoring system capable of continuously measuring (i.e., at least once every 15-minutes), calculating, and recording the individual component concentrations present in the flare vent gas or install, operate, calibrate and maintain a monitoring system capable of continuously measuring, calculating and recording NHV_g (in Btu/scf). The components are specified in Table 1.
- (5) For each measurement produced by the monitoring system, the operator shall determine the 15-minute block average as the arithmetic average of all measurements made by the monitoring system within the 15-minute period.
- (6) The operator must follow the calibration and maintenance procedures according to 40 CFR 63 Subpart CC Table 13 and operate monitoring system per 40 CFR 63.671 (a)(1) and (a)(4). **(03/19)**

Maintenance periods, instrument adjustments, or checks to maintain precision and accuracy and zero and span adjustments shall not exceed 5 percent of the time the flare is receiving regulated material. **(03/19)**

- B. Pilot Flame Requirements: EPN FL26 shall be operated with a flame present at all times when in use.

The pilot flame must be continuously monitored by a thermocouple or any other equivalent device, such as the video camera required for visible emission monitoring as outlined in 14.C.(2) below, used to detect the presence of a flame. The time, date and duration of any complete loss of pilot flame must be recorded. Each monitoring device must be maintained or replaced at a frequency in accordance with the manufacturer's specifications.

- C. Visible Emission Requirements: When the flare is receiving regulated material, it shall be operated with no visible emissions except for periods not to exceed a total of 5 minutes during any 2 consecutive hours. Visible emission observations must be conducted using either the methods in paragraph (1) of this section or, alternatively, the methods in paragraph (2) of this section.
- (1) At least once per day, conduct visible emissions observations using an observation period of 5 minutes using Method 22 at 40 CFR part 60, appendix A-7. If at any time the owner or operator sees visible emissions, even if the minimum required daily visible emission monitoring has been performed, the owner or operator shall immediately begin an observation period of 5 minutes using Method 22 at 40 CFR part 60, appendix A-7. If visible emissions are observed for more than one continuous minute during any 5-minute period, the observation period using Method 22 at 40 CFR part 60, appendix A-7 must be extended to 2 hours or until 5-minutes of visible emissions are observed.
 - (2) A video camera that is capable of continuously recording (i.e., at least one frame every 15 seconds with time and date stamps) images of the flare flame and a reasonable distance above the flare flame at an angle suitable for visible emissions observations

must be used to demonstrate compliance with this requirement. The owner or operator must provide real-time video surveillance camera output to the control room or other continuously manned location where the video camera images may be viewed at any time.

- D. Recordkeeping Requirements: All data must be recorded and maintained for a minimum of five years or for as long as applicable rule subpart(s) specify flare records should be kept, whichever is longer. Records must be maintained onsite and made available upon request by authorized representatives of the executive director, U.S. EPA, and any local air pollution control agency with jurisdiction.
- E. Reporting Requirements
- (1) The information specified in (2) below should be reported in the timeline specified by the applicable rules for which the gas-assist flare will control emissions.
 - (2) The owner or operator shall notify the executive director of periods of excess emissions in their Title V Periodic Reports. These periods of excess emissions shall include:
 - (a) Each 15-minute block during which there was at least one minute when regulated material was routed to the flare and a complete loss of pilot flame occurred.
 - (b) Periods of visible emissions events that exceed more than 5 minutes in any 2 hour consecutive period.
 - (c) Each 15-minute block period for which an applicable combustion zone operating limit (NHVcz) is not met for the gas-assist burner tip when regulated material is being combusted in the flare.
 - (d) Each 15-minute block period for which an applicable flare tip exit velocity limit (Vtip) is not met for the gas-assist burner tip when regulated material is being combusted in the flare.

Table 1 - Individual Component Properties

Component	Molecular Formula	MWi (lb/lb-mol)	NHVi (Btu/scf)	Lower Flammability Limit (LFLi) (volume %)
Acetylene ¹	C ₂ H ₂	26.04	1,404	2.5
Benzene ²	C ₆ H ₆	78.11	3,591	1.3
1,2-Butadiene ²	C ₄ H ₆	54.09	2,794	2.0
1,3-Butadiene	C ₄ H ₆	54.09	2,690	2.0
iso-Butane ¹	C ₄ H ₁₀	58.12	2,957	1.8

¹ Components to be monitored as specified in Special Condition No. 14.A(4).

² Components not required to be monitored as specified in Special Condition No. 14.A(4).

15. Emissions from the uncontrolled vents listed in the Emissions Sources - Emissions Caps table shall be assumed at Potential to Emit levels calculated in the Flexible Permit application.

Cooling Towers

16. The VOC associated with cooling tower water shall be monitored monthly with an air stripping system meeting the requirements of the TCEQ Sampling Procedures Manual, Appendix P (dated January 2003) or an approved equivalent sampling method. The results of the monitoring, cooling water flow rate, and maintenance activities on the cooling water system shall be recorded. The

³ The theoretical NHV for hydrogen is 274 Btu/scf, but for the purposes of this permit a NHV of 1,212 Btu/scf shall be used for the NHV calculations to be consistent with EPA practice

monitoring results and cooling water hourly mass flow rate shall be used to determine cooling tower hourly VOC emissions. The rolling 12-month cooling water emission rate shall be recorded on a monthly basis and be determined by summing the VOC emissions between VOC monitoring periods over the rolling 12-month period. The emissions between VOC monitoring periods shall be obtained by multiplying the total cooling water mass flow between cooling water monitoring periods by the earlier monthly monitored VOC results. **(02/06)**

17. The new cooling tower cell(s) added at Cooling Tower No. 84 (EPN CT84FUG), represented in permit amendment application Form PI-1 dated May 31, 2017, as updated, shall be operated and monitored in accordance with the following: **(07/18)**
 - A. The new cooling tower cells shall each be equipped with drift eliminators having manufacturer's design assurance of 0.001% drift or less. Drift eliminators shall be maintained and inspected at least annually. The permit holder shall maintain records of all inspections and repairs.
 - B. Total dissolved solids (TDS) shall not exceed 2900 parts per million by weight (ppmw). Dissolved solids in the cooling water drift are considered to be emitted as PM, PM₁₀, and PM_{2.5} as represented in the permit application calculations.
 - C. The new cooling tower cells shall be analyzed for particulate emissions using one of the following methods:
 - (1) Cooling water shall be sampled at least once per day for total dissolved solids (TDS); or
 - (2) TDS monitoring may be reduced to weekly if conductivity is monitored daily and TDS is calculated using a ratio of TDS-to-conductivity (in ppmw per μ mho/cm or ppmw/siemens). The ratio of TDS-to-conductivity shall be determined by concurrently monitoring TDS and conductivity on a weekly basis. The permit holder may use the average of two consecutive TDS-to-conductivity ratios to calculate daily TDS; or
 - (3) TDS monitoring may be reduced to quarterly if conductivity is monitored daily and TDS is calculated using a correlation factor established for each cooling tower. The correlation factor shall be the average of nine consecutive weekly TDS-to-conductivity ratios determined using C(2) above provided the highest ratio is not more than 10% larger than the smallest ratio.
 - (4) The permit holder shall validate the TDS-to-conductivity correlation factor once each calendar quarter. If the ratio of concurrently sampled TDS and conductivity is more than 10% higher or lower than the established factor, the permit holder shall increase TDS monitoring to weekly until a new correlation factor can be established.
 - D. Cooling water sampling shall be representative of the cooling tower feed water and shall be conducted using approved methods.
 - (1) The analysis method for TDS shall be EPA Method 160.1, ASTM D5907, or SM 2540 C [SM - 19th edition of Standard Methods for Examination of Water]. Water samples should be capped upon collection and transferred to a laboratory area for analysis.
 - (2) The analysis method for conductivity shall be either ASTM D1125-14 Test Method A (field or routine laboratory testing) or ASTM D1125-14 Test Method B (continuous monitor). The analysis may be conducted at the sample site or with a calibrated process conductivity meter. If a conductivity meter is used, it shall be calibrated at least

annually. Documentation of the method and any associated calibration records shall be maintained.

- (3) Alternate sampling and analysis methods may be used to comply with D(1) and D(2) with written approval from the TCEQ Regional Director.
 - (4) Records of all instrument calibrations and test results and process measurements used for the emission calculations shall be retained.
- E. Emission rates of PM, PM₁₀ and PM_{2.5} shall be calculated using the methodology specified in the permit application (Form PI-1 dated May 31, 2017, as updated), the measured TDS and the ratio or correlation of TDS to conductivity measurements, the design drift rate and the daily maximum and average actual cooling water circulation rate for the short term and annual average rates. Alternately, the design maximum circulation rate may be used for all calculations. Emission records shall be updated monthly.

Storage and Loading of VOC

18. The control requirements specified in paragraphs B through E of this condition shall not apply (1) where the VOC has an aggregate partial pressure of less than 0.5 pound per square inch, absolute (psia) at the maximum expected operating temperature or (2) to storage tanks smaller than 25,000 gallons.
- A. Internal floating deck or roof or equivalent control shall be equipped with one of the following closure devices between the wall of the storage vessel and the edge of the internal floating roof (IFR): (1) a liquid-mounted seal, (2) two continuous seals mounted one above the other, or (3) a mechanical shoe seal. Installation of equivalent control requires prior review and approval by the TCEQ Executive Director.
 - B. An open-top tank containing a floating roof (external floating roof-tank) which uses double seal or secondary seal technology shall be an approved control alternative to an IFR tank provided the primary seal consists of either a mechanical shoe seal or a liquid-mounted seal, and the secondary seal is rim-mounted. A weathershield is not approvable as a secondary seal unless specifically reviewed and determined to be vapor-tight.
 - C. For any tank equipped with a floating roof, the holder of this permit shall follow 40 CFR § 60.113b, Testing and Procedures, to verify seal integrity. Additionally, the permit holder shall follow 40 CFR § 60.115b, Reporting and Recordkeeping Requirements, to provide records of the dates seals were inspected, seal integrity, and corrective actions taken.
 - D. The floating roof design shall incorporate sufficient flotation to conform to the requirements of American Petroleum Institute (API) Code 650, or an equivalent degree of flotation, except that an internal floating cover need not be designed to meet rainfall support requirements and the materials of construction may be steel or other materials.
 - E. For purposes of assuring compliance with VOC emission limitations, the holder of this permit shall monitor daily tank throughput for comparison with the total maximum throughput used in the emission cap calculations in the permit application. A summary of short-term compliance will be based on the throughput of the 156 tanks calculated in the permit application to have the highest short-term emission rates. A list of these tanks will be kept on-site. A monthly record shall be maintained which includes tank or loading point identification number, control method used, tank or vessel capacity in gallons, name of the material stored or loaded, VOC molecular weight, VOC monthly average temperature in degrees Fahrenheit, VOC monthly

maximum temperature in degrees Fahrenheit, VOC vapor pressure at the monthly average material temperature in psia, VOC vapor pressure at the maximum monthly material temperature in psia, and VOC throughput for the previous month and year to-date. Records of VOC monthly average temperature are not required to be kept for unheated tanks that receive liquids that are at or below ambient temperatures. These records shall be maintained at the plant site for two years and be made available to representatives of the TCEQ upon request.

- F. Annual emissions for tanks and loading operations shall be calculated consistent with the methodology outlined in: (a) AP-42 "Compilation of Air Pollution Emission Factors, Chapter 12 - Storage of Organic Liquids" and (b) the TCEQ publication titled "Technical Guidance Package for Chemical Sources - Storage Tanks."
 - G. Compliance with the tank inspections required by Subpart 0 of this special condition shall be completed within 24 months after permanent change in service requiring a floating roof control occurs.
 - H. Except for labels, logos, etc. not to exceed 15 percent of the tank total surface area, uninsulated tank exterior surfaces exposed to the sun shall be initially white, aluminum, or stainless steel. Storage tanks must be equipped with permanent submerged fill pipes. **(06/17)**
19. No material having a vapor pressure of 0.5 psia or greater shall be loaded into marine vessels at Dock 4, tank trucks or railcars unless the vapors are controlled by a vapor recovery or vapor balance system maintaining a control efficiency of at least 90 percent or are routed to a control device having at least 98 percent destruction efficiency or removal efficiency.
20. For purposes of establishing the final emission rate caps for this flexible permit, implementation of the control requirements of SC No. 18 were utilized. If any other storage or control option is used for a storage tank subject to this permit, the emissions for the storage tank shall be calculated using the appropriate method for the storage or control option actually used for the storage tank. The net emission rates from these storage tanks must be equivalent or less than those obtained if the requirements of SC No. 18 were in place for all storage tanks. A storage or control option for a specific storage tank must comply with any applicable requirements of 30 TAC Chapter 115, 40 CFR Part 60 (NSPS), 40 CFR Part 61 (NESHAPS), or 40 CFR Part 63 (maximum available control technology).

Storage Tank Upgrades

21. The holder of this permit shall install in Tank 1499 the slotted guide pole emission controls required by the Storage Tank Emission Reduction Partnership Program (STERPP) agreement executed on April 2, 2001, between the permit holder and the EPA on or before March 31, 2007. Slotted guide poles required by the STERPP agreement must be properly operated and maintained according to the requirements contained in that agreement.
22. The H₂S concentration of the sulfur stored in Tank No. 1027 shall not exceed a maximum of 160 parts per million by weight (ppmw) or 75 ppmw on a rolling 12-month basis. Liquid samples of the product sulfur shall be taken and analyzed at least one day each week. Records of H₂S concentration for each sampling day and on a rolling 12-month basis shall be maintained at the plant site.

23. A minimum six-inch layer of diesel oil shall be maintained on the liquid surface of Tank Nos. D-1730 and D-310 at all times that these tanks are in polysulfide solution service.

Emission Standards

24. Emissions of NO_x, carbon monoxide (CO), sulfur dioxide (SO₂), PM, and VOC from combustion sources associated with this permit shall be determined in accordance with the following emission factors. The CEMS data shall be used if available. The most recent validated test emissions factors shall be used if CEMS data are not available. If CEMS and test data are not available, applicable AP-42 or vendor guarantee data will be used.

NO_x Emissions

The NO_x emissions from the Fluid Catalytic Cracking Units (FCCU2 and FCCU3) shall be based on available continuous emission monitoring system (CEMS) data. The NO_x emissions from heaters and boilers so equipped shall be based on available data from the CEMS or predictive emission monitoring system (PEMS). Available stack test data, vendor guarantees, or AP-42 emission factors used in the permit application shall be used to calculate NO_x emissions from those combustion sources not equipped with CEMS or PEMS. The NO_x emissions from transportable engines shall be calculated based on diesel fuel usage and the emission factors provided on the TCEQ Table 29s submitted October 6, 2000, as part of the permit amendment application. **(10/00)**

CO Emissions

The CO emissions from heaters and boilers so equipped shall be based on available data from the CEMS or PEMS. Available stack test data, vendor guarantees, or AP-42 emission factors used in the permit application shall be used to calculate CO emissions from those combustion sources not equipped with CEMS or PEMS. The CO emissions from transportable engines shall be calculated based on diesel fuel usage and the emission factors provided on the TCEQ Table 29s submitted October 6, 2000, as part of the permit amendment application. **(10/00)**

SO₂ Emissions

The SO₂ emissions from combustion sources shall be calculated based on annual fuel gas usage and the measured H₂S concentration in the fuel gas or shall be based on available CEMS data. The SO₂ emissions from transportable engines shall be calculated based on sulfur content of the diesel fuel provided on the TCEQ Table 29s submitted October 6, 2000, as part of the permit amendment application. **(10/00)**

PM Emissions

The PM emissions from combustion sources with the exception of the FCCU2 and FCCU3 shall be based on the annual fired duty in MMBtu per year (MMBtu/yr) and the AP 42 emission factors used in the permit application, or stack test data. For the FCCU2 and FCCU3, emissions shall be based on the maximum coke burn rates used in the permit application or available stack testing data. The PM emissions from transportable engines shall be calculated based on diesel fuel usage and the AP-42 emission factor of 0.31 pounds/MMBtu. For miscellaneous particulate sources emissions shall be based on appropriate emission factors used in the permit application. **(10/00)**

VOC Emissions

For all combustion sources with the exception of the FCCU2 and FCCU3, the VOC emissions shall be based on the annual fired duty in MMBtu/yr and AP-42 emission factors used in the permit application or available stack testing data. The VOC emissions from the FCCU2 and FCCU3 shall be based on regenerator rates and appropriate emission factors as used in the permit application. The VOC emissions from transportable engines shall be calculated based on diesel fuel usage and the emission factors provided on the TCEQ Table 29s submitted October 6, 2000, as part of the permit amendment application. **(10/00)**

25. Routine flare emissions shall be calculated using TCEQ-approved flare emission factors for NO_x and CO. The SO₂ emissions shall be based on the amount of sulfur in the material being burned consistent with the assumptions in the permit application. The VOC destruction efficiency of 98 percent shall be used to calculate VOC emissions for C-4s and greater. A VOC destruction efficiency of 99 percent shall be used to calculate VOC emissions for C-3s and lighter. **(10/06)**
26. Emissions from non-combustion sources associated with this permit shall be determined in accordance with the following emission factors:
 - A. Process Fugitives - emissions are to be estimated using: component counts, emission factors and control efficiencies from the TCEQ technical guidance document, "Equipment Leak Fugitives," dated October 2000.
 - B. Tanks - emissions are to be estimated using: (a) AP-42 "Compilation of Air Pollution Emission Factors" and (b) requirements outlined in SC No. 18.
 - C. Cooling Towers - emissions are to be estimated using: (a) recirculation rates and monthly monitoring data and (b) requirements of SC No. 16 or 17.
 - D. Maintenance, Start-up, and Shutdown (MSS) - emissions are to be estimated using: (a) engineering calculations consistent with the permit amendment application (Permit Numbers 18287 and PSDTX730) dated August 8, 2003, and appropriate for the specific start-up, shutdown, and maintenance activity listed in the attached table, entitled "Emission Sources – Emission Caps," (b) CEMS data, (c) the most recent stack test data, (d) AP-42 "Compilation of Air Pollution Emission Factors" or (e) the requirements outlined in SC No. 48.
 - E. Vents and other equipment - shall be assumed at the Potential to Emit calculated in the Flexible Permit Application. These emissions will be used for the determination of the compliance cap.
 - F. Loading - Emissions are to be estimated using AP-42 "Compilation of Air Pollution Emission Factors" based on the temperature, vapor pressure, and throughput of the materials loaded. **(10/06)**

27. The holder of this permit shall comply with NSPS Ja for the FCCUs and the following NO_x Emissions Control limits for FCCUs: **(08/22)**

EPN	NO _x Limit (ppmvd)	Averaging Time/Basis
FCCU-2	70	7-day rolling average at 0% O ₂
FCCU-2	45	365-day rolling average at 0% O ₂
FCCU-3	70	7-day rolling average at 0% O ₂
FCCU-3	27.84	365-day rolling average at 0% O ₂

The NO_x emissions (i) caused by or attributable to the startup, shutdown, or malfunction of FCCU2 or FCCU3 and/or (ii) during periods of malfunction of the relevant FCCU's NO_x Control System will not be used in determining compliance with the short-term (7-day) NO_x Limits established, provided that during such periods ExxonMobil implements good air pollution control practices to minimize NO_x emissions.

Emissions during any such period of startup, shutdown, or malfunction shall either be: (i) monitored with CEMS; or (ii) monitored in accordance with an alternative monitoring plan approved by the EPA if it is necessary to bypass the FCCU's main stack during the particular period of startup, shutdown, or malfunction.

28. NOx Emissions Control for Combustion Units. The holder of this permit shall comply with the following NOx efficiency and firing rate limits to achieve a reduction of 2,246 tpy NOx from the 2000-2001 Calendar Year Average. **(08/22)**

Combustion Unit Description	Combustion Unit EPN	NOx Limit ¹ (lb/MMBtu)	Compliance Demonstration Method

¹ NO_x emissions from combustion units using CEMS are calculated on a 365-calendar day rolling average basis.

Boilers

29. Boilers 16 and 17 (EPNs BOILER16, BOILER17) shall be fired with natural gas, plant fuel gas or blends of natural gas and plant fuel gas. **(04/22)**

When firing natural gas in Boilers 16 and 17, fuel must contain no more than 5 grains of total sulfur per 100 dry standard cubic feet (dscf).

When firing plant fuel gas (including blends of natural gas and plant fuel gas) in Boilers 16 and 17, fuel must contain no more than 10 grains of hydrogen sulfide per 100 dry standard cubic feet.

NO_x and CO emissions from Boilers 16 and 17 during routine operation shall not exceed the following: **(04/22)**

0.01 lb NO_x/MMBtu on an hourly average when firing natural gas and 0.015 when firing plant fuel gas (including blends of natural gas and plant fuel gas).

50 ppmvd CO corrected to 3 percent oxygen on an hourly average.

10 ppmvd NH₃ corrected to 3 percent oxygen on an 24-hour average.

Continuous Demonstration of Compliance

30. The holder of this permit shall install, calibrate, and maintain a CEMS or PEMS to determine the in-stack concentration of NO_x and CO from all heaters and boilers with maximum firing rates greater than or equal to 100 MMBtu/hr. **(08/22)**

A. A CEMS may be shared by up to three sources. The holder of this permit shall also maintain a CEMS to measure and record outlet CO, SO₂ and NO_x from the FCCU2 and FCCU3 Wet Gas Scrubbers. The CEMS shall be maintained on the SCU-2 as required by applicable provisions of 40 CFR Part 60 Subpart J or Ja.

- (1) The CEMS shall meet the design and performance specifications, pass the field tests, and meet the installation requirements and the data analysis and reporting requirements specified in the applicable Performance Specification Nos. 1 through 9, 40 CFR Part 60, Appendix B. If there are no applicable performance specifications in 40 CFR Part 60, Appendix B, contact the TCEQ Office of Air, Air Permits Division for requirements to be met.
- (2) The system shall be zeroed and spanned daily, and corrective action taken when the 24-hour span drift exceeds two times the amounts specified in the applicable Performance Specification Nos. 1 through 9, 40 CFR Part 60, Appendix B, or as specified by the TCEQ if not specified in Appendix B. Zero and span are not required on weekends and plant holidays if instrument technicians are not normally scheduled on those days.

Each monitor shall be quality-assured at least quarterly using cylinder gas audits (CGA) in accordance with 40 CFR Part 60, Appendix F, Procedure 1, § 5.1.2, with the following exception: a relative accuracy test audit (RATA) is not required once every four quarters (i.e., four successive quarterly CGA may be conducted). An equivalent quality-assurance method approved by the TCEQ may also be used. Successive quarterly audits shall occur no closer than two months.

The NO_x and O₂ CEMS for the sources listed below shall be installed, certified, calibrated, maintained and operated in accordance with 40 CFR 60.13 and Part 60 Appendix A and F, and the applicable performance specification test of 40 CFR Part 60 Appendix B. Unless Appendix F is otherwise required by the NSPS, state law or regulation, or permit or approval, in lieu of the requirements of 40 CFR Part 60 Appendix F 5.1.1, 5.1.3, and 5.1.4, ExxonMobil may conduct: (1) either a Relative Accuracy Audit (RAA) or a Relative Accuracy Test Audit (RATA) once every three (3) years; and (2) a Cylinder Gas Audit (CGA) each calendar quarter in which the RAA or RATA is not performed.

BH6WHB68, BH7B71, BH7B72, BH7B73, BH7B74, BH7WHB75, FCCU3F105, HCU1F701, HF3F3, LXU2B2, LXU2B4, PS3F306, PS7F701A, PS8F803, PS8F804, HF4F401, HF4F403, NHFF701, PS8F801, PS8F802, FCCU-2, FCCU-3

The CO and SO₂ CEMS for the sources listed below shall be installed, certified, calibrated, maintained and operated in accordance with 40 CFR 60.13 and Part 60 Appendix A and F, and the applicable performance specification test of 40 CFR Part 60 Appendix B. Unless Appendix F is otherwise required by the NSPS, state law or regulation, or permit or approval, in lieu of the requirements of 40 CFR Part 60 Appendix F 5.1.1, 5.1.3, and 5.1.4, ExxonMobil may conduct: (1) either a Relative Accuracy Audit (RAA) or a Relative Accuracy Test Audit (RATA) once every three (3)

years; and (2) a Cylinder Gas Audit (CGA) each calendar quarter in which the RAA or RATA is not performed.

FCCU-2, FCCU-3 All CGA exceedances of 15 percent accuracy or 5 ppm, whichever is greater and any CEMS downtime shall be reported to the appropriate TCEQ Regional Director, and necessary corrective action shall be taken. Supplemental stack concentration measurements may be required at the discretion of the appropriate TCEQ Regional Director. **(06/10)**

- (3) The monitoring data shall be reduced to hourly average concentrations at least once every day, using a minimum of four equally-spaced data points from each one-hour period. The individual average concentrations shall be reduced to units of the permit allowable emission rate in lb/hr at least once every week.
 - (4) All monitoring data and quality-assurance data shall be maintained by the source for a period of two years and shall be made available to the TCEQ Executive Director or a designated representative upon request. The data from the CEMS may, at the discretion of the TCEQ, be used to determine compliance with the conditions of this permit. The CEMS shall meet the design and performance specifications, testing requirements and data analysis and reporting requirements of 40 CFR Part 60, Appendix B, unless alternative requirements are approved by the TCEQ for non-NSPS sources.
- B. The PEMS must be based on measured parameters including (but not limited to) fuel flow, steam injection rate or pressure, and excess combustion air quantity.
- (1) The PEMS output as pounds of NO_x per hour will be averaged for each calendar hour and for the operating day. These results shall be recorded and maintained.
 - (2) The PEMS shall meet the requirements specified in 30 TAC § 117.213(f) as applicable to the monitoring of NO_x emissions. For the purposes of compliance with the quarterly RATA specified in § 117.213(f), and for the purposes of this permit only, if operating time during a calendar quarter is less than 60 days, the owner or operator may delay the RATA until the next calendar quarter; however, the RATA must be performed within 90 facility operating days after the previous RATA was completed. A quarterly RATA may be omitted if the facility is inoperative for 90 or more successive days immediately preceding the report due date.
 - (3) The PEMS downtime summaries shall be submitted to the appropriate TCEQ Regional Director once each calendar quarter. If no downtime periods occur, this shall be so stated in the quarterly summary. Necessary corrective action shall be taken for each PEMS downtime occurrence.
 - (4) Within 60 days after the PEMS is installed on any heater, a RATA shall be performed. Results of testing shall be submitted to the appropriate TCEQ Regional Office within 60 days after completion of the RATA. A result summary of all criteria testing performed pursuant to 30 TAC Chapter 117 shall be submitted within 60 days after completion of such tests.
 - (5) Following the three successive RATA referenced in paragraph (3) above, a RATA must be performed every six months pursuant to 40 CFR Part 60, Appendix B, Performance Specification 2, Subsection 4.3 (pertaining to NO_x). The RATA may be performed every 12 months if the relative accuracy during the previous audit for the NO_x monitor is less than or equal to 7.5 percent of the mean value of the reference method test data. Any RATA exceeding 20 percent or statistical test exceeding the applicable

standard shall be reported to the appropriate TCEQ Regional Director. A single RATA may be performed when any required quarterly or semiannual or annual RATA occur concurrently.

- C. The NH_3 concentration from Boilers 16 and 17 (EPNs: BOILER16, BOILER17) shall be tested or calculated according to one of the methods listed below. Testing for NH_3 slip is only required on days when the selective catalytic reduction (SCR) unit is in operation.
- (1) The holder of this permit may install, calibrate, maintain, and operate a CEMS to measure and record the concentrations of NH_3 . The NH_3 concentrations shall be corrected to 3 percent excess O_2 and used to determine compliance with the NH_3 emission caps outlined in the MAERT.
 - (2) As an approved alternative, the NH_3 slip may be measured using a sorbent or stain tube device specific for NH_3 measurement in the 5 to 10 parts per million (ppm) range. The frequency of sorbent or stain tube testing shall be daily for the first 60 days of operation, after which the frequency may be reduced to weekly testing if operating procedures have been developed to prevent excess amounts of NH_3 from being introduced in the SCR unit and when operation of the SCR unit has been proven successful with regard to controlling NH_3 slip. Daily sorbent or stain tube testing shall resume when the catalyst is within 30 days of its useful life expectancy. These results shall be recorded and used to determine compliance with the NH_3 caps in the MAERT.
 - (3) As an approved alternative to sorbent or stain tube testing or an NH_3 CEMS, the permit holder may install and operate a second NO_x CEMS probe located between the firebox and the SCR, upstream of the stack NO_x CEMS, which may be used in association with the SCR efficiency and NH_3 injection rate to estimate NH_3 slip. This condition shall not be construed to set a minimum NO_x reduction efficiency on the SCR unit. These results shall be recorded and used to determine compliance with the NH_3 caps in the MAERT.
 - (4) If the sorbent or stain tube testing indicates an NH_3 slip concentration which exceeds 5 ppm at any time, the permit holder shall begin NH_3 testing by either the Phenol Nitroprusside Method, the Indophenol Method, or the EPA Conditional Test Method (CTM) 27 on a quarterly basis, in addition to the weekly sorbent or stain tube testing. The quarterly testing shall continue until such time as the SCR unit catalyst is replaced; or if the quarterly testing indicates NH_3 slip is 4 ppm or less, the Phenol Nitroprusside/Indophenol/CTM 27 tests may be suspended until sorbent or stain tube testing again indicate 5 ppm NH_3 slip or greater. These results shall be recorded and used to determine compliance with the NH_3 caps in the MAERT.
 - (5) As an approved alternative to sorbent or stain tube testing, NH_3 CEMS, or a second NO_x CEMS, the permit holder may install and operate a dual stream system of NO_x CEMS at the exit of the SCR. One of the exhaust streams would be routed, in an unconverted state, to one NO_x CEMS and the other exhaust stream would be routed through a NH_3 converter to convert NH_3 to NO_x and then to a second NO_x CEMS. The NH_3 slip concentration shall be calculated from the delta between the two NO_x CEMS readings (converted and unconverted). These results shall be recorded and used to determine compliance with the NH_3 caps in the MAERT.
 - (6) The monitoring data for EPNs BOILER16 and BOILER17 shall be reduced to 24-hour average concentrations at least once every day, using a minimum of four equally-spaced data points from each one-hour period. The individual average concentrations shall be reduced to units of pounds per million BTU at least once every week.

Any other method used for measuring NH₃ slip shall require prior approval from the TCEQ Regional Office. **(04/22)**

- D. For the demonstration of PEMS performance, the appropriate TCEQ Regional Office shall be notified at least 15 days prior to each RATA in order to provide them the opportunity to observe testing.
 - E. The holder of this permit shall perform automatic sensor validation at least daily on any PEMS installed under authority of this permit. The permittee shall develop and implement plans that will ensure proper functioning of the monitoring systems, ensure proper accuracy and calibration of all operational parameters that affect emissions and serve as input to the PEMS, and ensure continuous operation within the certified operating range.
 - F. A PEMS is required to provide valid emission predictions at least 95 percent of the time that the heater being monitored is in operation.
 - G. The reporting requirements of 30 TAC § 117.219 may be substituted for the reporting requirements previously stated in this permit condition if the CEMS or PEMS is not subject to the requirements of 40 CFR Part 60 (NSPS). **(10/06)**
31. The holder of this permit shall operate a continuous H₂S monitoring system in a representative portion of each fuel gas system (blend gas [BG] and LBG) common to the permitted combustion units in accordance with the fuel sulfur monitoring requirements of 40 CFR § 60.105.
- The hourly average H₂S concentrations in the RBG and LBG shall be calculated by using a minimum of four equally-spaced data points from each one-hour period. At least once every week, the hourly average H₂S concentrations in the RBG and LBG shall be calculated and recorded. **(10/06)**
- The EPA has determined that four vent streams are exempt from sulfur oxide and hydrogen sulfide monitoring requirements of New Source Performance Standards, 40 CFR Part 60, Subpart J. Each of the four vent streams is inherently low in sulfur. The streams are:
- Hydroformer 3 (HF-3) Off-Gas from D-130 to Flare Stack 4 (FS-4) (EPN FLARE04)
 - Hot Oil Drum D-703 to Flare Stack 19 (FS-19) (EPN FL19) and Flare Stack 22 (FS-22) (EPN FL22)
 - Caustic Oxidation Unit (COU) Knock-out Drum D-42 to Incinerator I-001 (EPN COUI001)
 - Loading Racks 3 and 22 Off-Gas to Thermal Oxidizer TC-301 (EPN RACKSTO) **(08/12)**
32. Flares 19, 22, 25, and 26 are limited to pipeline quality natural gas or nitrogen for use as flare sweep gas or purge gas. The flares are limited to pipeline quality natural gas as flare supplemental fuel or pilot gas. **(04/17)**
33. Upon request by the Executive Director of the TCEQ or any local air pollution control program having jurisdiction, the holder of this permit shall provide a sample and/or an analysis of the fuel(s) utilized in these facilities or shall allow air pollution control agency representatives to obtain a sample for analysis.

34. The permit holder shall operate and maintain an excess O₂ analyzer on Heater F 301 (EPN RHCF301) to continuously monitor a representative sample of the post combustion gas mixture. **(10/06 PSD)**
35. Operating Parameters and Conditions
- A. Fuel used in the combustion units shall be limited to natural gas, RBG, low-Btu gas or a combination of these fuel gases. Fuel used in transportable engines shall be limited to fuels listed in the TCEQ Table 29s submitted October 6, 2000. **(10/00 PSD)**
 - B. The holder of this permit shall keep records for all LBG and BG fuel rates, the total sulfur content of LBG streams on a daily basis, the H₂S content of the blend gas streams on a daily basis and other data as necessary to determine hourly SO₂ emission rates from these facilities. For the purposes of demonstrating hourly compliance, either continuous operations shall be assumed, or actual fuel consumption shall be used to determine emissions from transportable engines. Actual diesel fuel usage records shall be used to calculate annual emissions for transportable engines. **(06/10)**
 - C. Effective December 13, 2005, ExxonMobil shall not burn Fuel Oil in any combustion unit except during periods of Natural Gas Curtailment. Nothing herein is intended to limit, or shall be interpreted as limiting: **(08/22)**
 - (1) the use of torch oil in an FCCU regenerator to assist in starting, restarting, maintaining hot standby, or maintaining regenerator heat balance; or
 - (2) combustion of acid soluble oil in a combustion device.

Recordkeeping

36. The holder of this permit shall keep records to demonstrate compliance with the annual (TPY) emission limits specified by the flexible permit for the following compounds: NO_x, CO, PM, SO₂, VOC, benzene, H₂SO₄, NH₃, and H₂S to be maintained on-site. An annual summary of the emissions inventory for each pollutant for which an emission cap has been established in this permit shall be provided to the TCEQ Houston Regional Office no later than March 31 of the year following the calendar year for which the summary is prepared unless an extension to the annual emission inventory is approved by the TCEQ. This summary will include a table listing the pollutant, actual total annual emissions for that pollutant, and the emission cap for that pollutant.
37. The holder of this permit shall keep records of all fuel rates (including LBG and BG) for all combustion units, the total sulfur content of LBG streams, the H₂S content of the blend gas streams, heat input and other data, as necessary, to determine hourly SO₂, CO, and PM emission rates from these facilities. Natural gas-fired combustion units less or equal to 20 MMBtu/hr and engines less than 150-horsepower or used solely to power other engines or turbines during start-ups, or operated exclusively for firefighting, flood control, or engines used less than 850 hours per year (hr/yr) are exempt from the requirements of this special condition. Emission rates for these combustion units will be determined by estimation or run-time meters.
38. Claus Train Nos. A, B, and C are allowed to vent sulfur pit purge emissions to their designed alternate disposition for a maximum of 876 hr/yr. Claus Train No. D is allowed to vent sulfur drum purge emissions to its designed alternate disposition for a maximum of 876 hr/yr. Records of the time that each train diverts its purge emissions to its alternate disposition shall be kept on a rolling

two-year basis. Year-to-date totals of the hours that purge emissions are sent to an alternate disposition shall be kept for each train. (05/02)

Initial Determination of Compliance

39. Sampling ports and platform(s) shall be incorporated into the design of all stacks subject to SC No. 40 according to the specifications set forth in the attachment entitled "Chapter 2, Stack Sampling Facilities." Alternate sampling facility designs may be submitted for approval by the TCEQ Regional Director.
40. An initial compliance test will be required for combustion units without CEMS, except as indicated in F of this special condition, by December 31, 2009.

- A. The TCEQ Houston Regional Office shall be contacted as soon as testing is scheduled but not less than 15 days prior to sampling to schedule a pretest meeting.

The notice shall include:

- (1) Date for pretest meeting.
- (2) Date sampling will occur.
- (3) Name of firm conducting sampling.
- (4) Type of sampling equipment to be used.
- (5) Method or procedure to be used in sampling.

The purpose of the pretest meeting is to review the necessary sampling and testing procedures, to provide the proper data forms for recording pertinent data, and to review the format procedures for submitting the test reports.

A written proposed description of any deviation from sampling procedures specified in permit conditions or the TCEQ or the EPA sampling procedures shall be made available to the TCEQ prior to the pretest meeting. The TCEQ Regional Director or the Director of the TCEQ Compliance Support Division in Austin shall approve or disapprove of any deviation from specified sampling procedures.

Requests to waive testing for any pollutant specified in B of this condition shall be submitted to the TCEQ Austin Office of Permitting, Remediation, and Registration, Air Permits Division. Test waivers and alternate or equivalent procedure proposals for NSPS testing which must have the EPA approval shall be submitted to the Director of the TCEQ Compliance Support Division in Austin.

- B. Air contaminants from the combustion units to be tested for include (but are not limited to) NO_x and CO. The FCCU-2 and FCCU-3 shall be tested for PM₁₀, and sulfuric acid no later than December 31, 2007. The thermal oxidizers (EPNs RACKSTO, DOCKSBZTO, DOCKSVOCTOA and DOCKSVOCTOB) shall be tested for CO and NO_x no later than December 31, 2007, or within six months of resuming operation. **(10/06)**

Facilities to reduce mercaptans from the Delayed Coker Unit (DCU) shall be installed at the next scheduled DCU turnaround, but in no case later than March 31, 2008. These facilities shall be tested to demonstrate that a 50 percent reduction in mercaptans from the sponge oil absorber overhead stream has been achieved. **(10/07)**

- C. For the combustion units, sampling shall occur within 90 days after Low-NO_x burners are placed into normal operation but no later than 180 days after installation. Sampling shall also occur at such other times as may be required by the Executive Director of the TCEQ, except as indicated in SC No. 40.F. Requests for additional time to perform sampling shall be submitted to the TCEQ Houston Regional Office. Additional time to comply with the applicable requirements of 40 CFR Parts 60 and 61 requires the EPA approval, and requests shall be submitted to the Director of the TCEQ Compliance Support Division in Austin.
(05/02)

- D. The heaters shall operate at maximum firing rates during stack emission testing. Primary operating parameters that enable determination of firing rate shall be monitored and recorded during the stack tests. These parameters are to be determined at the pretest meeting. If the heater is unable to operate at maximum rates during testing, then future firing rates may be limited to the rates established during testing at maximum heater firing rates. Additional stack testing may be required when higher firing rates are achieved.

During stack emission testing of the grandfathered heaters the unit(s) shall be operated with a normal burner configuration for the tested firing rate. The term "normal burner configuration" means the manner in which the burners are typically operated, including the number of burners being fired, the firing rate of each burner, and the air to fuel ratio. The normal burner configuration is to be determined at the pretest meeting if such a meeting is required by the TCEQ Houston Regional Office.

- E. Three copies of the final sampling report shall be distributed within 90 days after sampling is completed. Sampling reports shall comply with the enclosed provisions of Chapter 14 of the TCEQ Sampling Procedures Manual.

The reports shall be distributed as follows:

One copy to the TCEQ Houston Regional Office.

One copy to the Harris County Pollution Control Department, Pasadena.

- F. Combustion units less than 40 MMBtu/hr need not be tested.
- G. Sampling for CO and NO_x for all combustion sources not equipped with a CEMS or PEMS shall be performed every five years as detailed in this condition.

41. Furnace EPN RHCF302 shall be fired with fuel gas containing no more than 10 grains of total sulfur per 100 dry standard cubic feet (dscf).

The holder of this permit shall install a continuous H₂S monitoring system in the RHCF302 fuel gas system in accordance with the fuel sulfur monitoring requirements of 40 CFR §60.107a. **(05/13)**

42. Piping, Valves, Connectors, Pumps, and Compressors in VOC Service - 28VHP

- A. These conditions shall not apply (1) where the VOC has an aggregate partial pressure or vapor pressure of less than 0.044 psia at 68°F, or (2) operating pressure is at least 5 kilopascals (0.725 pound per square inch [psi]) below ambient pressure. Equipment excluded from this condition shall be identified in a list to be made available upon request.
- B. Construction of new and reworked piping, valves, pump systems, and compressor systems shall conform to applicable American National Standards Institute, API, American Society of Mechanical Engineers, or equivalent codes.

- C. New and reworked underground process pipelines shall contain no buried valves such that fugitive emission monitoring is rendered impractical.
- D. To the extent that good engineering practice will permit, new and reworked valves and piping connections shall be so located to be reasonably accessible for leak checking during plant operation. Non-accessible valves, as defined by 30 TAC Chapter 115, shall be identified in a list to be made available upon request.
- E. New and reworked piping connections shall be welded or flanged. Screwed connections are permissible only on piping smaller than two-inch diameter. No later than the next scheduled quarterly monitoring after initial installation or replacement, all new or reworked connections shall be gas-tested or hydraulically tested at no less than normal operating pressure and adjustments made as necessary to obtain leak-free performance. Connectors shall be inspected by visual, audible, and/or olfactory means at least weekly by operating personnel walk-through. Each open-ended valve or line shall be equipped with a cap, blind flange, plug, or a second valve. Except during sampling, the second valve shall be closed.
- F. Accessible valves shall be monitored by leak checking for fugitive emissions at least quarterly using an approved gas analyzer. Sealless/leakless valves (including, but not limited to, welded bonnet bellows and diaphragm valves) and relief valves equipped with a rupture disc upstream or venting to a control device are not required to be monitored. For valves equipped with rupture discs, a pressure-sensing device shall be installed between the relief valve and rupture disc to monitor disc integrity. All leaking discs shall be replaced at the earliest opportunity but no later than the next process shutdown.

An approved gas analyzer shall conform to requirements listed in 40 CFR § 60.485(a)-(b).

Replacements for leaking components shall be re-monitored within 15 days of being placed back into VOC service.

- G. Except as may be provided for in the special conditions of this permit, all pump and compressor seals shall be monitored with an approved gas analyzer at least quarterly or be equipped with a shaft sealing system that prevents or detects emissions of VOC from the seal. Seal systems designed and operated to prevent emissions or seals equipped with an automatic seal failure detection and alarm system need not be monitored. These seal systems may include (but are not limited to) dual pump seals with barrier fluid at higher pressure than process pressure, seals degassing to vent control systems kept in good working order, or seals equipped with an automatic seal failure detection and alarm system. Submerged pumps or sealless pumps (including, but not limited to, diaphragm, canned, or magnetic-driven pumps) may be used to satisfy the requirements of this condition and need not be monitored.
- H. Damaged or leaking valves or connectors found to be emitting VOC in excess of 500 ppmv or found by visual inspection to be leaking (e.g., dripping process fluids) shall be tagged and replaced or repaired. Damaged or leaking pump and compressor seals found to be emitting VOC in excess of 2,000 ppmv or found by visual inspection to be leaking (e.g., dripping process fluids) shall be tagged and replaced or repaired.
- I. Every reasonable effort shall be made to repair a leaking component, as specified in this paragraph, within 15 days after the leak is found. If the repair of a component would require a unit shutdown, the repair may be delayed until the next scheduled shutdown. All leaking components which cannot be repaired until a scheduled shutdown shall be identified for such repair by tagging. At the discretion of the TCEQ Executive Director or a designated representative, early unit shutdown or other appropriate action may be required based on the number and severity of tagged leaks awaiting shutdown.

- J. The results of the required fugitive instrument monitoring and maintenance program shall be made available to the TCEQ Executive Director or his designated representative upon request. Records shall indicate appropriate dates, test methods, instrument readings, repair results, justification for delay of repairs, and corrective actions taken for all components. Records of physical inspections are not required unless a leak is detected.
- K. Alternative monitoring frequency schedules of 30 TAC §§ 115.352 through 115.359 or National Emission Standards for Organic Hazardous Air Pollutants, 40 CFR Part 63, Subpart H, may be used in lieu of Items F through G of this condition.
- L. Compliance with the requirements of this condition does not assure compliance with requirements of 30 TAC Chapter 115, any applicable NSPS, or any applicable NESHAPS and does not constitute approval of alternative standards for these regulations.
- M. In addition to the weekly physical inspection required by Item E of this special condition, all DCU and LSM connectors in gas vapor and light liquid service shall be monitored annually with an approved gas analyzer in accordance with Items F through J of this special condition. Alternative monitoring frequency schedules of 40 CFR Part 63, Subpart H, National Emission Standards for Organic Hazardous Air Pollutants for Equipment Leaks, may be used in lieu of the monitoring frequency required by this permit condition. Compliance with this condition does not assure compliance with requirements of applicable state or federal regulations and does not constitute approval of alternative standards for these regulations. 28 CNTA (05/02)

43. Piping, Valves, Pumps, and Compressors in contact with Ammonia– 28AVO (04/22)

Except as may be provided for in the Special Conditions of this permit, the following requirements apply to Boilers 16 and 17:

- A. Audio, olfactory, and visual checks for leaks within the operating area shall be made every four hours.
- B. As soon as practicable, following the detection of a leak, plant personnel shall take at least one of the following actions:
 - (1) Isolate the leak.
 - (2) Commence repair or replacement of the leaking component.
 - (3) Use a leak collection/containment system to prevent the leak until repair or replacement can be made if immediate repair is not possible.

Date and time of each inspection shall be noted in the operator's log or equivalent. Records shall be maintained at the plant site of all repairs and replacements made due to leaks. These records shall be made available to representatives of the Texas Commission on Environmental Quality (TCEQ) upon request

44. Piping, Valves, Pumps, and Compressors in Ammonium Polysulfide Service

- A. Audio, olfactory, and visual checks for ammonium polysulfide leaks within the operating area associated with Tanks D-1730 and D-310 when storing polysulfide solution shall be made daily.
- B. Immediately, but no later than one hour upon detection of a leak, plant personnel shall take the following actions:

- (1) Isolate the leak.
- (2) Commence repair or replacement of the leaking component.
- (3) Use a leak collection or containment system to prevent the leak until repair or replacement can be made if immediate repair is not possible.

Date and time of each inspection shall be noted in the operator's log or equivalent. Records shall be maintained at the plant site of all repairs and replacements made due to leaks. These records shall be made available to representatives of the TCEQ upon request.

Loading Operations at Docks 2 and 4

45. All VOC loading emissions associated with benzene, toluene, or raffinate barge loading activities at Docks 2 and 4 shall be routed to the thermal oxidizers by a vacuum-assisted collection system. The thermal oxidizers shall be operated with a minimum combustion temperature of 1400°F, averaged over each loading cycle. The temperature data shall use a minimum of four equally-spaced data points from each one-hour period. Barges shall not be loaded unless the vapor collection system is properly connected and the entire collection and destruction system is working properly. **(08/03)**
46. A vacuum-assisted collection system shall be installed which will produce a vacuum in the barge during all benzene, toluene, and raffinate loading operations at Docks 2 and 4. Should the vacuum-assisted collection system cease operating for any reason, procedures to terminate loading operations shall begin immediately. The vacuum system shall be repaired before loading operations can resume. It is not permissible to load benzene, toluene, or raffinate barges at Dock Nos. 2 and 4 at any time without the vacuum system in operating condition. A pressure/vacuum gauge shall be installed on the suction side of the loading rack vacuum-assisted collection system to verify vacuum. **(10/06)**

Federal PAL

47. This permit establishes Plant-Wide Applicability Limits (PALs) for VOC, carbon monoxide (CO), nitrogen oxide (NO_x), sulfur dioxide (SO₂), particulate matter (PM), H₂S, and H₂SO₄. The PALs are effective for ten years after this permit is issued. Physical changes and changes in method of operation at this site are exempt from federal New Source Review for VOC, CO, NO_x, SO₂, H₂S, H₂SO₄, and PM as long as site emissions do not exceed PAL caps.

The following type of facilities may be added to the site without altering the PAL permit:

- A. Process Fugitives – Monitoring and recordkeeping for process fugitives will be performed consistent with SC Nos. 42, 43, and 44.
- B. Tanks and Loading– Monitoring and recordkeeping for tanks and loading operations will be performed consistent with SC No. 18.
- C. Flares- Monitoring and recordkeeping for flares will be performed consistent with SC No. 13 or 14, as applicable. **(03/19)**
- D. Cooling Towers - Monitoring and recordkeeping for cooling towers will be performed consistent with SC Nos. 16 and 16.

- E. Combustion Sources - Monitoring and recordkeeping for combustion sources will be performed consistent with Special Condition No. 30 for sources having CEMS, Special Condition No. 31 for H₂S in fuel gas where applicable, and SC Nos. 35, 36, and 37 for fuel usage.
- F. Engines - Monitoring and recordkeeping for engines will be performed consistent with SC Nos. 35, 36, and 37 for fuel use or run-time meters.
- G. Vents - Monitoring and record keeping for vents will be performed consistent with SC No. 26.
- H. Maintenance, Startup and Shutdown - Monitoring and recordkeeping will be performed consistent with SC Nos. 48 through 65.

The PAL permit must be altered prior to the start of operation of any other new facility types to ensure there is adequate monitoring and record keeping. All facilities at the site emitting PAL pollutants must be included in the compliance determination under the PAL emission caps including sources authorized by PBR, Standard Permit, Permit Alterations, or Permit Amendment.

Piping and piping components (valves, flanges, and pumps) are authorized by this permit to the extent that the component count and associated emissions do not exceed that identified in the flexible permit application.

State authorization must be obtained by permit amendment, permit by rule or standard permit prior to start of construction for new facilities. **(10/06)**

Planned Maintenance, Start-Up, and Shutdown (MSS) Activities

- 48. This permit authorizes emissions from the following temporary facilities used to support planned MSS activities at permanent site facilities: frac tanks, containers, vacuum trucks, facilities used for painting or abrasive blasting, portable control devices identified in SC No. 58, ancillary equipment such as fugitives and controlled recovery systems. Emissions from temporary facilities are authorized provided the temporary facility (a) does not remain on the plant site in the same service for more than 12 consecutive months, (b) is used solely to support planned MSS activities at the permanent site facilities, and (c) does not operate as a replacement for an existing authorized facility. This permit also authorizes emissions for the planned MSS activities summarized in Attachment C, "Planned MSS Activity Summary".

Attachment A identifies inherently low emitting planned MSS activities that may be performed at the refinery. Emissions from activities identified in Attachment A shall be considered to be equal to the potential to emit represented in the permit application. The estimated emissions from the activities listed in Attachment A must be revalidated annually. This revalidation shall consist of the estimated emissions for each type of activity and the basis for that emission estimate.

Attachment B identifies routine planned MSS activities that may be performed at the refinery. Emissions from activities identified in Attachment B may be tracked through work orders or equivalent. Emissions from activities identified in Attachment B shall be estimated using the number of work orders or equivalent for each calendar month and the emissions associated with that activity as identified in the permit application.

Unless otherwise prescribed in this permit, the performance of each planned MSS activity not identified in Attachments A or B, and the associated emissions, shall be recorded and include at least the following information:

- A. The physical location at which emissions from the planned MSS activity occurred, including the emission point number and common name for the point at which the emissions were released into the atmosphere;
 - B. The type of planned MSS activity and the reason for the planned MSS activity;
 - C. The common name and the facility identification number, if applicable, of the facilities at which the planned MSS activity and emissions occurred;
 - D. The start date and time of the planned MSS activity and its duration;
 - E. The estimated quantity of each air contaminant, or mixture of air contaminants, emitted with the data and methods used to determine it. The emissions shall be estimated using the methods identified in the permit application, consistent with good engineering practice.
- Emissions from all completed planned MSS activities shall be summed for each calendar month, and the rolling 12-month emissions shall be updated, by the end of the next calendar month. **(06/10)**

49. Process equipment and facilities, with the exception of those identified in SC Nos. 52, 53, and 54 and Attachment A shall be depressurized, emptied, degassed, and placed in service in accordance with the following requirements.
- A. Process equipment that contains material with a VOC partial pressure greater than or equal to 0.044 psia at 68°F shall be depressurized to a control device or a controlled recovery system prior to venting to atmosphere, degassing, or draining liquid.
 - B. If mixed phase materials must be removed from process equipment, the cleared material shall be routed to a knockout drum or equivalent to allow for managed initial phase separation. If the VOC partial pressure is greater than or equal to 0.044 psia at 68°F, any vents in the system shall be routed to a control device or a controlled recovery system. Control shall remain in place until degassing has been completed or the system is no longer vented to atmosphere.
 - C. All liquids from process equipment shall be removed to the maximum extent practical prior to opening equipment to commence degassing and/or maintenance. Liquids with a VOC partial pressure greater than or equal to 0.044 psia at 68°F shall be drained into a closed vessel unless prevented by the physical configuration of the equipment. If it is necessary to drain liquid into an open pan or sump, the liquid shall be covered or transferred to a covered vessel within one hour of being drained. After draining is complete, empty open pans may remain in use for housekeeping reasons to collect incidental drips.
 - D. If the VOC partial pressure is greater than or equal to 0.044 psia at 68°F, facilities shall be degassed using good engineering practice to ensure air contaminants are removed from the system through the control device or controlled recovery system to the extent allowed by process equipment or storage vessel design. The control device or recovery system utilized shall be recorded with the estimated emissions from controlled and uncontrolled degassing calculated using the methods that were used to determine allowable emissions for the permit application.
 - (1) The locations and/or identifiers where the purge gas or steam enters the process equipment or storage vessel and the exit points for the exhaust gases shall be recorded. If the process equipment is purged with a gas, two system volumes of purge gas must have passed through the control device or controlled recovery system before the vent stream may be sampled to verify acceptable VOC concentration prior to

uncontrolled venting. The VOC sampling and analysis shall be performed using an instrument meeting the requirements of SC No. 50. The sampling point shall be upstream of the inlet to the control device or controlled recovery system. The sample ports and the collection system must be designed and operated such that there is no air leakage into the sample probe or the collection system downstream of the process equipment or vessel being purged. The facilities shall be degassed to a control device or controlled recovery system until the VOC concentration is less than 10,000 ppmv or 10 percent of the lower explosive limit (LEL).

- (2) For MSS activities identified in Attachment B, the following option may be used in lieu of above. The facilities being prepared for maintenance shall not be vented directly to atmosphere, except as necessary to verify an acceptable VOC concentration and establish isolation of the work area, until the VOC concentration has been verified to be less than 10 percent of the LEL per the site safety procedures.
- E. Gases and vapors (including vapors from residual liquids) with a VOC partial pressure greater than or equal to 0.044 psia at 68°F may be vented directly to the atmosphere if all the following criteria are met:
- (1) It is not technically practicable to depressurize or degas, as applicable, into the process;
 - (2) There is not an available connection to a plant control system (flare); and
 - (3) There is no more than 50 pounds of air contaminant to be vented to the atmosphere during shutdown or startup, as applicable.

All instances of venting directly to the atmosphere per Paragraph E of this special condition must be documented when occurring as part of any planned MSS activity. The emissions associated with venting without control must be included in the work order or equivalent for those planned MSS activities identified in Attachment B. **(06/10)**

50. Air contaminant concentration shall be measured using an instrument/detector meeting one set of requirements specified below.
- A. VOC concentration shall be measured using an instrument meeting all the requirements specified in EPA Method 21 (40 CFR Part 60, Appendix A) with the following exceptions:
 - (1) The instrument shall be calibrated within 24 hours of use with a calibration gas such that the response factor of the VOC (or mixture of VOCs) to be monitored shall be less than 2.0. The calibration gas and the gas to be measured, and its approximate response factor, shall be recorded.
 - (2) Sampling shall be performed as directed by this permit in lieu of section 8.3 of Method 21. During sampling, data recording shall not begin until after two times the instrument response time. The date and time of sampling shall be recorded, and VOC concentration shall be monitored for at least five minutes, and the highest stable measured VOC concentration shall be recorded.
 - B. Colorimetric gas detector tubes may be used to determine air contaminant concentrations if they are used in accordance with the following requirements.
 - (1) The air contaminant concentration measured is less than 80 percent of the range of the tube. If the maximum range of the tube is greater than the release concentration

defined in (3), the concentration measured is at least 20 percent of the maximum range of the tube.

- (2) The tube is used in accordance with the manufacturer's guidelines.
- (3) At least 2 samples taken at least five minutes apart must satisfy the following prior to uncontrolled venting:

measured contaminant concentration (ppmv) < release concentration.

Where the release concentration is:

$(10,000) * (\text{mole fraction of the total air contaminants present that can be detected by the tube})$.

The mole fraction may be estimated based on process knowledge. The release concentration and basis for its determination shall be recorded.

Records shall be maintained of the tube type, range, measured concentrations, and time the samples were taken.

- C. Lower explosive limit (LEL) shall be measured with a lower explosive limit detector, with the following requirements.

- (1) The detector shall be calibrated monthly with a certified pentane gas standard at 25 to 58 percent of the lower explosive limit (LEL) for pentane. Records of the calibration date and the calibration result (pass/fail) shall be maintained.
- (2) A daily functionality test shall be performed on each detector using the same certified gas standard used for calibration. The LEL detector shall read no lower than 90 percent of the calibration gas certified value. Records of the functionality test date and the test result (pass/fail) shall be maintained.
- (3) A certified methane gas standard equivalent to 25 to 58 percent of the LEL for pentane may be used for calibration and functionality tests provided that the LEL response is within 95 percent of that for pentane. **(01/12)**

- 51. If the removal of a component for repair or replacement results in an open-ended line or valve that is subject to SC No. 42, the open ended line or valve is exempt from any permit special condition requirement to install a cap, blind flange, plug, or second valve for 72 hours. If the repair or replacement of the component is not completed within 72 hours, the permit holder shall complete either of the following within that 72-hour time period:

- A. Install a cap, blind flange, plug, or second valve on the line or valve; or
- B. Verify that there is not a VOC leak from the open-ended line or valve. The open ended line or valve shall be monitored at least once each week in accordance with the monitoring method requirements of SC No. 42, except that a VOC leak is defined as any VOC reading greater than background. Leaks must be repaired no later than one calendar day after the leak is detected or a cap, blind flange, plug, or second valve must be installed on the line or valve. The results of this weekly verification and any corrective actions taken shall be recorded. **(06/10)**

- 52. This permit authorizes emissions from the VOC storage tanks identified in the attached facility list during planned floating roof landings. Tank floating roofs may only be landed for changes of tank service or tank inspection/maintenance as identified in the permit application, except when the VOC

vapors below the floating roof are routed to a control device or a controlled recovery system from the time the floating roof is landed until the floating roof is within 10 percent by volume of being refloated. This exception will not apply to tank convenience landings and such landings are not represented in the permit application. Emissions from change of service tank floating roof landings shall not exceed 10 tons of VOC in any rolling 12-month period. Tank floating roof landings include all operations when the tank floating roof is on its supporting legs. These emissions are subject to the maximum allowable emission rates indicated on the MAERT. The following requirements apply to tank floating roof landings.

- A. The tank liquid level shall be continuously lowered after the tank floating roof initially lands on its supporting legs until the tank has been drained to the maximum extent practicable without entering the tank. Liquid level may be maintained steady for a period of up to two hours if necessary to allow for valve lineups and pump changes necessary to drain the tank. This requirement does not apply if the VOC vapor under a floating roof is routed to a control device or a controlled recovery system during this process.
- B. If the VOC partial pressure of the liquid previously stored in the tank is greater than or equal to 0.044 psia at 68°F, tank refilling or degassing of the vapor space under the landed floating roof must begin within 24 hours after the tank has been drained unless the vapor under the floating roof is routed to a control device or a controlled recovery system during this period. Floating roof tanks with liquid capacities less than 100,000 gallons may be degassed without control if the VOC partial pressure of the standing liquid in the tank has been reduced to less than 0.02 psia prior to ventilating the tank. Controlled degassing of the vapor space under landed roofs shall be completed as follows:
 - (1) Any gas or vapor removed from the vapor space under the floating roof must be routed to a control device or a controlled recovery system, and controlled degassing must be maintained until the VOC concentration before the inlet to the control device or controlled recovery system is less than 10,000 ppmv or 10 percent of the LEL. The locations and identifiers of vents other than permanent roof fittings and seals, control device or controlled recovery system, and controlled exhaust stream shall be recorded. There shall be no other gas/vapor flow out of the vapor space under the floating roof when degassing to the control device or controlled recovery system.
 - (2) The vapor space under the floating roof shall be vented using good engineering practice to ensure VOC vapors are flushed out of the tank through the control device or controlled recovery system to the extent allowed by the storage tank design.
 - (3) A volume of purge gas equivalent to twice the volume of the vapor space under the floating roof shall be passed through the control device or into a controlled recovery system before the vent stream may be sampled to verify acceptable VOC concentration. The measurement of purge gas volume shall not include any make-up air introduced into the control device or recovery system. The VOC sampling and analysis shall be performed as specified in SC No. 50.
 - (4) The sample ports and the collection system must be designed and operated such that there is no air leakage into the sample probe or the collection system downstream of the process equipment or vessel being purged.
 - (5) Degassing must be performed every 24 hours unless there is no standing liquid in the tank or the VOC partial pressure of the remaining liquid in the tank is less than 0.15 psia.

- C. The tank shall not be opened except as necessary to prepare for degassing and cleaning, or ventilated to the atmosphere without control, until either there is no standing VOC liquid in the tank or the liquid in the tank has a VOC partial pressure less than 0.02 psia. These criteria may be demonstrated in any one of the following ways.
- (1) Low VOC partial pressure liquid that is soluble with the liquid previously stored may be added to the tank to lower the VOC partial pressure of the liquid mixture remaining in the tank to less than 0.02 psia. This liquid shall be added during tank degassing if practicable. The estimated volume of liquid remaining in the drained tank and the volume and type of liquid added shall be recorded. The liquid VOC partial pressure may be estimated based on this information and engineering calculations.
 - (2) If water is added or sprayed into the tank to remove standing VOC liquid, one of the following must be demonstrated:
 - (a) Take a representative sample of the liquid remaining in the tank and verify no visible sheen using the static sheen test from 40 CFR Part 435 Subpart A, Appendix 1.
 - (b) Take a representative sample of the liquid remaining in the tank and verify hexane soluble VOC concentration is less than 1,000 ppmw using EPA Method 1664 (may also use 8260B or 5030 with 8015 from SW-846).
 - (c) Stop ventilation and close the tank for at least 24 hours. When the tank manway is opened after this period, verify VOC concentration is less than 1,000 ppmv through the procedure in SC No. 50.
 - (3) No standing VOC liquid is verified through visual inspection.
- Records shall be maintained to document the method used to release the tank under Paragraph C of this special condition.
- D. Following a planned MSS-related floating roof landing, tanks shall be refilled in accordance with the following requirements, unless the vapor space below the floating roof is routed to a control device or a controlled recovery system when the tank is refilled until the floating roof is within 10 percent by volume of being refloated. The control device or controlled recovery system used and the method and locations used to connect the control device or controlled recovery system shall be recorded. All vents from the tank being refilled shall exit through the control device.
- (1) The tank shall be refilled as rapidly as practicable until the floating roof is off its legs. Tanks 67 and 348 shall be refilled at a rate not to exceed 3,600 barrels per hour.
 - (2) Only one planned MSS-related floating roof tank containing VOC with a partial pressure greater than or equal to 0.044 psia at 68°F may be filled at any time.
- E. The occurrence of each floating roof landing shall be recorded, and emissions calculated per SC No. 52. The records shall include at least the following information:
- (1) the identification of the tank and emission point number, and any control devices or recovery systems used to reduce emissions;
 - (2) the reason for the tank floating roof landing;
 - (3) for the purpose of estimating emissions, the date, time, and other information specified for each of the following events:
 - (a) the floating roof was initially landed,

- (b) all liquid was pumped from the tank to the extent practical,
 - (c) start and completion of controlled degassing, and total volumetric flow,
 - (d) all standing liquid was removed from the tank or any transfers of low VOC partial pressure liquid to or from the tank including volumes and vapor pressures to reduce tank liquid VOC partial pressure to <0.02 psi;
 - (e) if there is liquid in the tank, VOC partial pressure of liquid, start and completion of uncontrolled degassing, and total volumetric flow;
 - (f) refilling commenced, liquid filling the tank, and the volume necessary to float the roof; and
 - (g) tank floating roof off supporting legs, floating on liquid.
 - (4) the estimated quantity of each air contaminant, or mixture of air contaminants, emitted between events c. and g. with the data and methods used to determine it. The emissions associated with floating roof landing activities shall be calculated using the methods described in Section 7.1.3.2 of AP-42 "Compilation of Air Pollution Emission Factors, Chapter 7 - Storage of Organic Liquids" dated November 2006 and the permit application. **(06/10)**
53. Fixed-roof tanks shall not be ventilated without control, until either all standing liquid has been removed from the tank or the liquid in the tank has a VOC partial pressure less than 0.02 psia. This shall be verified and documented through one of the criteria identified in SC No. 52.C. Fixed-roof tanks manways may be opened without emission controls when there is standing liquid with a VOC partial pressure greater than 0.02 psi vapor as necessary to set up for degassing and cleaning. One manway may be opened to allow access to the tank to remove, or to lower the VOC partial pressure of, the remaining liquid. The emission control system shall meet the requirements of SC No. 52.B(1) through 52.B(5) and records maintained per SC No. 52.E(3)(c) through 52.E(3)(e), and the estimated quantity in SC No. 52.E(4). Low vapor pressure liquid may be added to and removed from the tank as necessary to lower the VOC partial pressure of the liquid mixture remaining in the tank to less than 0.02 psia. **(06/10)**
54. The following requirements apply to vacuum and air mover truck operations to support planned MSS at this site:
- A. Vacuum pumps and blowers shall not be operated on trucks containing or while collecting liquids with a VOC partial pressure greater than or equal to 0.044 psia at 68°F unless the vacuum/blower exhaust is routed to a control device or a controlled recovery system.
 - B. The fill line intake shall be equipped with a "duckbill" or equivalent attachment if the hose end cannot be submerged in the liquid being collected.
 - C. A daily record containing the information identified below is required for each vacuum truck in operation at the site each day.
 - (1) Prior to initial use, identify any liquid in the truck. Record the liquid level and document that the VOC partial pressure is less than 0.044 psia at 68°F if the vacuum/blower exhaust is not routed to a control device or a controlled recovery system. After each liquid collection, identify the liquid collected and document that the VOC partial pressure is less than 0.044 psia at 68°F if the vacuum exhaust is not routed to a control device or a controlled recovery system.

- (2) For each liquid collection made with the vacuum operating, record the duration of any periods when air may have been entrained with the liquid collected. The reason for operating in this manner and whether a "duckbill" or equivalent was used shall be recorded. Short, incidental periods, such as those necessary to walk from the truck to the fill line intake, do not need to be documented.
 - (3) If the vacuum/blower exhaust is controlled with a control device other than an engine or oxidizer, record the VOC exhaust concentration upon commencing each collection, at the end of each collection, and at least every hour during each collection, measured using an instrument meeting the requirements of SC No. 50.
 - (4) The volume in the vacuum truck at the end of the day, or the volume unloaded, as applicable.
 - D. The permit holder shall determine the vacuum truck emissions each month using the daily vacuum truck records and the calculation methods utilized in the permit application. If records of the volume of liquid collected for each pick-up are not maintained, the emissions shall be determined using the physical properties of the liquid collected with the greatest potential emissions. Rolling 12-month vacuum truck emissions shall also be determined on a monthly basis.
 - E. If the VOC partial pressure of all the liquids collected into the truck is less than 0.10 psia, this shall be recorded when the truck is unloaded or leaves the refinery site and the emissions may be estimated as the maximum potential to emit for a truck in that service as documented in the permit application. The recordkeeping requirements in Paragraphs C and D of this special condition do not apply. **(06/10)**
55. The following requirements apply to frac tanks, temporary tanks, and vessels used in support of planned MSS activities.
- A. The exterior surfaces of these tanks/vessels that are exposed to the sun shall be white or aluminum effective May 1, 2013, except for labels, logos, etc., not to exceed 15 percent of the exterior surface area. This requirement does not apply to tanks/vessels that only vent to atmosphere when being filled.
 - B. These tanks/vessels must be covered and equipped with fill pipes that discharge within six inches of the tank/vessel bottom.
 - C. These requirements do not apply to vessels storing less than 100 gallons of liquid that are closed such that the vessel does not vent to atmosphere.
 - D. The permit holder shall maintain an emissions record which includes calculated emissions of VOC from all frac tanks during the previous calendar month and the past consecutive 12-month period. The record shall include tank identification number, dates put into and removed from service, control method used, tank capacity and volume of liquid stored in gallons, name of the material stored, VOC vapor molecular weight, and VOC partial pressure at the estimated monthly average material temperature in psia. Filling emissions for tanks shall be calculated using the TCEQ publication titled "Technical Guidance Package for Chemical Sources - Loading Operations" and standing emissions determined using: the TCEQ publication titled "Technical Guidance Package for Chemical Sources - Storage Tanks."
 - E. If the tank/vessel is used to store liquid with VOC partial pressure less than 0.044 psia at 68°F, records may be limited to the days the tank is in service and the liquid stored.

Emissions may be estimated based upon the potential to emit as identified in the permit application. **(6/10)**

56. The MSS activities represented in the permit application may be authorized under permit by rule only if the procedures, emission controls, monitoring, and recordkeeping are the same as those required by this permit. **(6/10)**
57. All permanent facilities must comply with all operating requirements, limits, and representations in the permits identified in Attachment D during planned startup and shutdown unless alternate requirements and limits are identified in this permit or approved by TCEQ. Alternate requirements for emissions from routine emission points are identified below.
- A. Combustion units, with the exception of flares, at this site are exempt from NO_x and CO operating requirements identified in special conditions in this NSR permit during planned startup and shutdown if the following criteria are satisfied.
- (1) The maximum allowable emission rates in the permit authorizing the facility are not exceeded.
 - (2) The startup period does not exceed eight hours in duration and the firing rate does not exceed 75 percent of the design firing rate. The time it takes to complete the shutdown does not exceed 4 hours.
 - (3) Control devices are started and operating properly when venting a waste gas stream.
- B. The limits or requirements identified below apply to the operations of the specified facilities during planned startup and shutdown. Emissions shall be estimated using good engineering practice and methods to provide reasonably accurate representations for emissions. **(04/13)**
- (1) The Process Vent identified as EPN MEK13V, Blanket Gas Vent, shall not be routed to an oil absorber or equivalent control device with a removal efficiency of less than 80 percent for more than 7 days.
 - (2) The Tail Gas Cleanup Unit (TGCU) vent shall not exceed 10 ppmv hydrogen sulfide, calculated as ppmv SO₂ (dry basis) at zero percent excess air, on a rolling 12-hour average basis for more than 3 days.
 - (3) Sulfur pit emissions shall not vent to the atmosphere for more than three days.
 - (4) During periods of startup and shutdown of the flexicoker and the gas turbine and waste heat boiler, GT301/WHB301, the CO emissions are not required to comply with 30 TAC § 117.310(c)(1)(A), 400 ppmv at 3 percent O₂ on a rolling 24-hour average basis. A CO continuous emission monitor must be properly operated and maintained. The emissions during startup can average 2,500 ppmv at 3 percent O₂ on a rolling 24-hour average basis for up to 2.5 days, then with the operation of the waste heat boiler emissions can average 700 ppmv at 3 percent O₂ on a rolling 24-hour average basis for up to an additional 9 days. Shutdown can average 1,100 ppmv at 3 percent O₂ on a rolling 24-hour average basis for up to four days for these facilities.
 - (5) During periods of startup of full-burn fluid Catalytic Cracking Unit 2 (FCCU-2), the CO emissions are not required to comply with 30 TAC § 117.310(c)(1)(A), 400 ppmv at 3 percent O₂ on a rolling 24-hour average basis. A CO continuous emission monitor must be properly operated and maintained. The emissions during FCCU-2 startup, change in feed quality, loss of oxygen from an external source, or loss of air blower can

average 4,000 ppmv at 3 percent O₂ on a rolling 24-hour average basis for up to four days.

- (6) During periods of startup of partial-burn Fluid Catalytic Cracking Unit 3 (FCCU-3), the CO emissions are not required to comply with 30 TAC § 117.310(c)(1)(A), 400 ppmv at 3 percent O₂ on a rolling 24-hour average basis. A CO continuous emission monitor must be properly operated and maintained. The emissions during FCCU-3 startup can average 40,000 ppmv at 3 percent O₂ on a rolling 24-hour average basis for up to four days.
- (7) During periods of startup of partial-burn without operation of at least one CO boiler both Fluid Catalytic Cracking Unit 3 (FCCU-3) and FCCU-2 cannot initiate input of feed oil to the reactors simultaneously per representations in the May 5, 2008 modeling submitted for the MSS application. This condition applies only to those instances when both FCCUs require startup.

A record shall be maintained indicating the start and end times each of the activities identified in Paragraphs A and B of this special condition above occur and that the requirements for each have been satisfied. **(6/10)**

58. Control devices required by this permit for emissions from planned MSS activities are limited to those types identified in this condition. Control devices shall be operated with no visible emissions except periods not to exceed a total of five minutes during any two consecutive hours. Each device used shall meet all the requirements identified for that type of control device.

Controlled recovery systems identified in this permit shall be directed to an operating refinery process or to a collection system that is vented through a control device meeting the requirements of this permit condition.

A. Carbon Adsorption System (CAS).

- (1) The CAS shall consist of 2 carbon canisters in series with adequate carbon supply for the emission control operation.
- (2) The CAS shall be sampled downstream of the first can and the concentration recorded at least once every hour of CAS run time to determine breakthrough of the VOC. The sampling frequency may be extended to up to 30 percent of the minimum potential saturation time for a new can of carbon. The permit holder shall maintain records including the calculations performed to determine the minimum saturation time.

The permit holder may elect to extend the carbon sampling frequency to longer periods based on previous experience with carbon control of a MSS waste gas stream. The past experience must be with the same VOC, type of facility, and MSS activity. The basis for the sampling frequency shall be recorded. If the VOC concentration on the initial sample downstream of the first carbon canister following a new polishing canister being put in place is greater than 100 ppmv above background, it shall be assumed that breakthrough occurred while that canister functioned as the final polishing canister and a permit deviation shall be recorded.
- (3) The method of VOC sampling and analysis shall be by detector meeting the requirements of SC No. 50.
- (4) Breakthrough is defined as the highest stable measured VOC concentration at or exceeding 100 ppmv above background. When the condition of breakthrough of VOC

from the initial saturation canister occurs, the waste gas flow shall be switched to the second canister and a fresh canister shall be placed as the new final polishing canister within four hours.

- (5) Records of CAS monitoring shall include the following:
 - (a) Sample time and date.
 - (b) Monitoring results (ppmv).
 - (c) Canister replacement log.
- (6) Single canister systems are allowed if the time the carbon canister is in service is limited to no more than 30 percent of the minimum potential saturation time. The permit holder shall maintain records for these systems, including the calculations performed to determine the saturation time. The time limit on carbon canister service shall be recorded and the expiration date attached to the carbon can.

B. Thermal Oxidizer.

- (1) The thermal oxidizer firebox exit temperature shall be maintained at not less than 1400°F and waste gas flows shall be limited to assure at least a 0.5-second residence time in the fire box while waste gas is being fed into the oxidizer.
- (2) The thermal oxidizer exhaust temperature shall be continuously monitored and recorded when waste gas is directed to the oxidizer. The temperature measurements shall be made at intervals of six minutes or less and recorded at that frequency.

The temperature measurement device shall be installed, calibrated, and maintained according to accepted practice or the manufacturer's specifications. The device shall have an accuracy of the greater of ± 0.75 percent of the temperature being measured expressed in degrees Celsius or $\pm 2.5^{\circ}\text{C}$.

C. Internal Combustion Engine.

- (1) The internal combustion engine shall have a VOC destruction efficiency of at least 99 percent.
- (2) The engine must have been stack tested with propane or butane to confirm the required destruction efficiency within the past 12 months. VOC shall be measured in accordance with the applicable EPA Reference Method during the stack test and the exhaust flow rate may be determined from measured fuel flow rate and measured oxygen concentration. A copy of the stack test report shall be maintained with the engine. There shall also be documentation of acceptable VOC emissions following each occurrence of engine maintenance which may reasonably be expected to increase emissions including oxygen sensor replacement and catalyst cleaning or replacement. Stain tube indicators specifically designed to measure VOC concentration shall be acceptable for this documentation, provided a hot air probe or equivalent device is used to prevent error due to high stack temperature, and three sets of concentration measurements are made and averaged. Portable VOC analyzers meeting the requirements of SC No. 50 are also acceptable for this documentation.
- (3) The engine shall be operated with an oxygen sensor-based air-to-fuel ratio (AFR) controller. Documentation for each AFR controller that the manufacturer's or supplier's recommended maintenance has been performed, including replacement of the oxygen sensor as necessary for oxygen sensor based controllers shall be maintained with the

engine. The oxygen sensor shall be replaced at least quarterly in the absence of a specific written recommendation.

D. Plant Flare System

- (1) The heating value and velocity requirements in 40 CFR § 60.18 shall be satisfied during operations authorized by this permit.
- (2) The flare shall be operated with a flame present at all times and/or have a constant pilot flame. The pilot flame shall be continuously monitored by a thermocouple or an infrared monitor. The time, date, and duration of any loss of pilot flame shall be recorded. Each monitoring device shall be accurate to, and shall be calibrated at a frequency in accordance with, the manufacturer's specifications or equivalent.
- (3) Monitoring shall be used to maintain waste gas above the minimum heating value. Measurement, good engineering practice, or process knowledge shall be used to maintain waste gas above the minimum heating value. **(03/19)**
- (4) Flares identified in Special Condition No. 13 shall comply with the requirements of Special Condition 13 in lieu of Special Condition No. 58.D.(1)-(3) when controlling emissions from MSS activities. **(03/19)**
- (5) Flares identified in Special Condition No. 14 shall comply with the requirements of Special Condition No. 14 in lieu of Special Condition No. 58.D.(1)-(3) when controlling emissions from MSS activities. **(03/19)**

E. Closed Loop Refrigerated Vapor Recovery System.

- (1) The vapor recovery system shall be installed on the facility to be degassed using good engineering practice to ensure air contaminants are flushed from the facility through the refrigerated vapor condensers and back to the facility being degassed. The vapor recovery system and facility being degassed shall be enclosed except as necessary to ensure structural integrity (such as roof vents on a floating roof tank).
- (2) VOC concentration in vapor being circulated by the system shall be sampled and recorded at least once every 4 hours at the inlet of the condenser unit with an instrument meeting the requirements of SC No. 50.
- (3) The quantity of liquid recovered from the tank vapors and the tank pressure shall be monitored and recorded each hour. The liquid recovered shall increase with each reading and the tank pressure shall not exceed one inch water pressure while the system is operating. **(6/10)**

59. The following requirements apply to capture systems for the plant flare system.

- A. Either conduct a once a month visual, audible, and/or olfactory inspection of the capture system to verify there are no leaking components in the capture system; or verify the capture system is leak-free by inspecting in accordance with 40 CFR Part 60, Appendix A, Test Method 21 once a year. Leaks shall be indicated by an instrument reading greater than or equal to 500 ppmv above background.

- B. The control device shall not have a bypass.

or

If there is a bypass for the control device, comply with either of the following requirements:

- (1) Install a flow indicator that records and verifies zero flow at least once every fifteen minutes immediately downstream of each valve that if opened would allow a vent stream to bypass the control device and be emitted, either directly or indirectly, to the atmosphere; or
- (2) Once a month, inspect the valves, verifying the position of the valves and the condition of the car seals that prevent flow out the bypass.

These requirements do not apply to high point vent and low point drain valves.

- C. If any of the above inspections is not satisfactory, the permit holder shall promptly take necessary corrective action. Records shall be maintained documenting the performance and results of the inspections required above. **(06/10)**
60. If spray guns are used to apply paint, they shall be airless or high volume low pressure (HVLP) or have the same or higher transfer efficiency as airless or HVLP spray guns. **(06/10)**
61. Emissions from painting activities, except for minor painting identified in Attachment A to this permit, at this site must satisfy the criteria below. New compounds may also be added through the use of the procedure below.
- A. Short-term (pounds per hour [lb/hr]) and annual (TPY) emissions shall be determined for each chemical in the paint as documented in the permit application. The calculated emission rate shall not exceed the maximum allowable emissions rate at any emission point.
 - B. The Effect Screening Level (ESL) for the material shall be obtained from the current TCEQ ESL list or by written request to the TCEQ Toxicology Section.
 - C. The total painting emissions of any compound must satisfy one of the following conditions:
 - (1) The total emission rate is less than 0.1 lb/hr and the ESL greater than or equal to 2 $\mu\text{g}/\text{m}^3$; or
 - (2) The emission rate of the compound in pounds per hour is less than the ESL for the compound divided by 1000 ($\text{ER} < \text{ESL}/1,000$).
 - D. The permit holder shall maintain records of the information below and the demonstrations in steps A through C above. The following documentation is required for each compound:
 - (1) Chemical name(s), composition, and chemical abstract registry number if available.
 - (2) Material Safety Data Sheet.
 - (3) Maximum concentration of the chemical in weight percent
 - (4) Paint usage shall be recorded each month. **(06/10)**
62. No visible emissions shall leave the property due to painting or abrasive blasting. **(06/10)**
63. Black Beauty and Garnet Sand may be used for abrasive blasting. The permit holder may also use blast media that meet the criteria below:
- A. The media shall not contain asbestos or greater than 1.0 weight percent crystalline silica.
 - B. The weight fraction of any metal in the blast media with a short term effects screening level (ESL) less than 50 micrograms per cubic meter as identified in the most recently published TCEQ ESL list shall not exceed the $\text{ESL}_{\text{metal}}/1,000$.

C. The MSDS for each media used shall be maintained on-site.

Blasting media usage shall be recorded each month. **(06/10)**

64. With the exception of the interim MAERT emission limits, these permit conditions become effective on the first day of the month following 180 days after permit issuance. During this period, emissions shall be estimated using good engineering practice and methods to provide reasonably accurate representations for emissions. The basis used for determining the quantity of air contaminants to be emitted shall be recorded. The permit holder may maintain abbreviated records of emissions from Attachment A and B activities as allowed in SC No. 48 rather than documenting all the information required by SC No. 48.A through 48.A. **(06/10)**
65. Planned MSS activities must be conducted in a manner consistent with good practice for minimizing emissions, including the use of air pollution control equipment, practices, and processes. All reasonable and practical efforts to comply with SC Nos. 3 and 48 through 64, must be used when conducting the planned MSS activity, until the commission determines that the efforts are unreasonable or impractical, or that the activity is an unplanned MSS activity. **(06/10)**

ATTACHMENT D

Flexible Permit Numbers 18287, PSDTX730M4, and PAL7

Facility List

This permit authorizes planned maintenance, startup, and shutdown (MSS) emissions from the permanent site facilities existing at the time of permit issuance. Emissions may occur from temporary facilities (for example, frac tanks, containers, vacuum trucks, facilities used for painting or abrasive blasting, portable control devices or controlled recovery systems) to support the MSS activities performed at the permanent site facilities.

Date: June 3, 2010

Emission Sources - Maximum Allowable Emission Rates

Permit Numbers 18287, PAL7, and PSDTX730M4

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities, sources, and related activities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

Air Contaminants Data

Emission Point No. (1)	Source Name (2)	Air Contaminant Name (3)	Emission Rates	
			lbs/hour	TPY (4)

Emission Sources - Maximum Allowable Emission Rates

- (1) Emission point identification - either specific equipment designation or emission point number from plot plan.
- (2) Specific point source name. For fugitive sources, use area name or fugitive source name.
- (3)
 - NO_x - nitrogen oxide
 - CO - carbon monoxide
 - SO₂ - sulfur dioxide
 - PM - particulate matter, suspended in the atmosphere, including PM₁₀
 - PM₁₀ - particulate matter equal to or less than 10 microns in diameter. Where PM is not listed, it shall be assumed that no PM greater than 10 microns is emitted.
 - PM_{2.5} - particulate matter equal to or less than 2.5 microns in diameter
 - VOC - volatile organic compounds as defined in Title 30 Texas Administration Code § 101.1
 - H₂S - hydrogen sulfide
 - H₂SO₄ - sulfuric acid
 - NH₃ - ammonia
 - COS - carbonyl sulfide
 - CS₂ - carbon disulfide
- (4) Compliance with annual emission limits (tons per year) is based on a 12 month rolling period.
- (5) Includes Initial and Final MSS Emission Caps
- (6) Emissions limits are for the new cooling tower cell(s) added at Cooling Tower No. 84 (EPN CT84FUG), as represented in the permit amendment application Form PI-1 dated May 31, 2017, as updated.

Date: April 14, 2022
